Designing Deep Learning Systems Chi Wang, Donald Szeto, 2023-07-25 To be practically usable a deep learning model must be built into a software platform As a software engineer you need a deep understanding of deep learning to create such a system This book gives you that depth Designing deep learning systems a guide for software engineers teaches you everything you need to design and implement a production ready deep learning platform First it presents the big picture of a deep learning system from the developer s perspective including its major components and how they are connected Then it carefully guides you through the engineering methods you ll need to build your own maintainable efficient and scalable deep learning platforms

Designing for the User Experience in Learning Systems Evangelos Kapros, Maria Koutsombogera, 2018-09-25 While the focus of the UX research and design discipline and the Learning Sciences and instructional design disciplines is often similar and almost always tangential there seems to exist a gap i e a lack of communication between the two fields Not much has been said about how UX Design can work hand in hand with instructional design to advance learning The goal of this book is to bridge this gap by presenting work that cuts through both fields To illustrate this gap in more detail we provide a combined view of UX Research and Design Educational Technology While the traditional view has perceived the Learning Experience Design as a field of Instructional Design we will highlight its connection with UX an aspect that has become increasingly relevant Our focus on user experience research and design has a unique emphasis on the human learning experience we strongly believe that in learning technology the technological part is only mediating the learning experience and we do not focus on technological advancements per se as we believe they are not the solution in themselves to the problems that education is facing This book aims to lay out the challenges and opportunities in this field and highlight them through research presented in the various chapters Thus it presents a unique opportunity to represent areas of learning technology that go very far beyond the MOOC and the classroom technology The book provides an outstanding overview and insights in the area and it aims to serve as a significant and valuable source for learning researchers and practitioners The chapter User requirements when designing learning e content interaction for all is available open access under a CC BY 4.0 license at link.springer.com
