Lecture Notes in Pure and Applied Mathematics , 1991 [The Cumulative Book Index](#) , 1991 A world list of books in the English language **Uncertain Labeling Graphs and Uncertain Graph Classes (with Survey for Various Uncertain Sets)** Takaaki Fujita, Florentin Smarandache, Graph theory a branch of mathematics studies the relationships between entities using vertices and edges Uncertain Graph Theory has emerged within this field to model the uncertainties present in real world networks Graph labeling involves assigning labels typically integers to the vertices or edges of a graph according to specific rules or constraints This paper introduces the concept of the Turiyam Neutrosophic Labeling Graph which extends the traditional graph framework by incorporating four membership values truth indeterminacy falsity and a liberal state at each vertex and edge This approach enables a more nuanced representation of complex relationships Additionally we discuss the Single Valued Pentapartitioned Neutrosophic Labeling Graph The paper also examines the relationships between these novel graph concepts and other established types of graphs In the Future Directions section we propose several new classes of Uncertain Graphs and Labeling Graphs And the appendix of this paper details the findings from an investigation into set concepts within Uncertain Theory These set concepts have inspired numerous proposals and studies by various researchers driven by their applications mathematical properties and research interests
