Lectures On Modular Forms:

Lectures on Modular Forms Robert C. Gunning, 2016-03-02 New interest in modular forms of one complex variable has been caused chiefly by the work of Selberg and of Eichler But there has been no introductory work covering the background of these developments H C Gunning's book surveys techniques and problems only the simpler cases are treated modular forms of even weights without multipliers the principal congruence subgroups and the Hecke operators for the full modular group alone *Lectures on Modular Forms* Joseph Lehner, 1969 **Lectures on Modular Forms** Robert Clifford Gunning, 1959 **Lectures on Modular Forms** Robert Clifford Gunning, 1962 *Lectures on Modular Forms* R. C Gunning, 1962 **Lectures on Modular Forms** Joseph Lehner, 2017-05-17 Concise book offers expository account of theory of modular forms and its application to number theory and analysis Substantial notes at the end of each chapter amplify the more difficult subjects 1969 edition *The 1-2-3 of Modular Forms* Jan Hendrik Bruinier, Gerard van der Geer, Günter Harder, Don Zagier, 2008-02-10 This book grew out of three series of lectures given at the summer school on Modular Forms and their Applications at the Sophus Lie Conference Center in Nordfjordeid in June 2004 The first series treats the classical one variable theory of elliptic modular forms The second series presents the theory of Hilbert modular forms in two variables and Hilbert modular surfaces The third series gives an introduction to Siegel modular forms and discusses a conjecture by Harder It also contains Harder's original manuscript with the conjecture Each part treats a number of beautiful applications

Introductory Lectures on Siegel Modular Forms Helmut Klingen, 2008-05-15 This volume aims to present a straightforward and easily accessible survey of the analytic theory of quadratic forms Written at an elementary level the book provides a sound basis from which the reader can study advanced works and undertake original research Roughly half a century ago C L Siegel discovered a new type of automorphic forms in several variables in connection with his famous work on the analytic theory of quadratic forms Since then Siegel modular forms have been studied extensively because of their significance in both automorphic functions in several complex variables and number theory The comprehensive theory of automorphic forms to subgroups of algebraic groups and the recent arithmetical theory of modular forms illustrate these two aspects in an illuminating manner The text is based on the author's lectures given over a number of years and is intended for a one semester graduate course although it can serve equally well for self study The only prerequisites are a knowledge of algebra number theory and complex analysis **Lectures on Hilbert Modular Varieties and Modular Forms** Eyal Zvi Goren, 2002 This book is devoted to certain aspects of the theory of p -adic Hilbert modular forms and moduli spaces of abelian varieties with real multiplication The theory of p -adic modular forms is presented first in the elliptic case introducing the reader to key ideas of N M Katz and J P Serre It is reinterpreted from a geometric point of view which is developed to present the rudiments of a similar theory for Hilbert modular forms The theory of moduli spaces of abelian varieties with real multiplication is presented first very explicitly over the complex numbers Aspects of the general theory are then exposed in

particular local deformation theory of abelian varieties in positive characteristic The arithmetic of p adic Hilbert modular forms and the geometry of moduli spaces of abelian varieties are related This relation is used to study q expansions of Hilbert modular forms on the one hand and stratifications of moduli spaces on the other hand The book is addressed to graduate students and non experts It attempts to provide the necessary background to all concepts exposed in it It may serve as a textbook for an advanced graduate course

Ram Murty, Michael Dewar, Hester Graves, 2016-11-25 This book introduces the reader to the fascinating world of modular forms through a problem solving approach As such besides researchers the book can be used by the undergraduate and graduate students for self instruction The topics covered include q series the modular group the upper half plane modular forms of level one and higher level the Ramanujan function the Petersson inner product Hecke operators Dirichlet series attached to modular forms and further special topics It can be viewed as a gentle introduction for a deeper study of the subject Thus it is ideal for non experts seeking an entry into the field Lectures on Modular Forms and Theta Series Correspondences Solomon Friedberg, 1986 *Modular Forms and String Duality* Noriko Yui, Helena Verrill, and Charles F. Doran, This book is a testimony to the BIRS Workshop and it covers a wide range of topics at the interface of number theory and string theory with special emphasis on modular forms and string duality They include the recent advances as well as introductory expositions on various aspects of modular forms motives differential equations conformal field theory topological strings and Gromov Witten invariants mirror symmetry and homological mirror symmetry The contributions are roughly divided into three categories arithmetic and modular forms geometric and differential equations and physics and string theory The book is suitable for researchers working at the interface of number theory and string theory BOOK JACKET
