Abstract

Purpose – The purpose of this paper is to introduce and identify the basic components, tasks and application areas of expert systems (ESs) as a decision support system that has been increasingly used in the business world lately and explore its potential for improving the effectiveness of administrative decisions in the public sector. Empirically, the paper explains the role of ESs in fostering decision-making processes at the Ministry of Investment and International Cooperation (MIRC) in Egypt.

Design/methodology/approach – The design of this research is descriptive in the theoretical section and quantitative in the empirical one. Theoretically, the study adopted both the analytical approach and systems approach to demonstrate main concepts and relationships, while it conducted an empirical study to investigate the correlations in practice.

Findings – The research concluded that the usage of ESs is deemed to be on the top of the technical solutions that might help public organizations develop their management quality and maintain competitive strengths. In addition, the results proved that ESs contribute to administrative decisions at MIRC.

Practical implications – The paper provides profitable findings and recommendations which can be applied by Egyptian public executives, in an attempt to ensure high quality and successful decisions using modern technology.

Originality/value – This study has valuable implications for theory and practice together, as it offers numerous contributions to literature in the area of concern.

Keywords Expert systems, Decision support systems, Managerial decision making, Public sector reform, Ministry of investment and international cooperation in Egypt

1. Introduction

For further development of organizations in the present highly dynamic environment, their analysis is not just anticipated, but also required (Boltikova *et al.*, 2010, p. 155). Certainly, decision-making is becoming the remaining basis of excellence and competitive advantage that can guarantee superior returns for organizations (Harvey and TIS, 2007, p. 3). Successful organizations outperform their competitors in at least three ways; they make better decisions, they take decisions faster, and they implement decisions more. While most would agree with this, much less is known about what makes good or bad decisions (Dillon

Kidd, 2012-12-06 Building an expert system involves eliciting analyzing and interpreting the knowledge that a human expert uses when solving problems Experience has shown that this process of knowledge acquisition is both difficult and time consuming and is often a major bottleneck in the production of expert systems Unfortunately an adequate theoretical basis for knowledge acquisition has not yet been established This requires a classification of knowledge domains and problem solving tasks and an improved understanding of the relationship between knowledge structures in human and machine In the meantime expert system builders need access to information about the techniques currently being employed and their effectiveness in different applications The aim of this book therefore is to draw on the experience of AI scientists cognitive psychologists and knowledge engineers in discussing particular acquisition techniques and providing practical advice on their application Each chapter provides a detailed description of a particular technique or methodology applied within a selected task domain The relative strengths and weaknesses of the technique are summarized at the end of each chapter with some suggested guidelines for its use We hope that this book will not only serve as a practical handbook for expert system builders but also be of interest to AI and cognitive scientists who are seeking to develop a theory of knowledge acquisition for expert systems
