Reading Development in Chinese Children Catherine McBride-Chang,Hsuan-Chih Chen,2003-12-30 This text reviews both similarities and unique cultural linguistic and script differences of Chinese relative to alphabetic reading and even across Chinese regions Chinese reading acquisition relies upon children s strongly developing analytic skills as highlighted here These 16 chapters present state of the art research on diverse aspects of Chinese children s reading development This edited volume presents research on Chinese children s reading development across Chinese societies Authors from China Hong Kong Singapore and Taiwan among others present the latest findings on how Chinese children learn to read Reading acquisition in Chinese involves some parameters typically not encountered in some other orthographies such as English For example Chinese readers in different regions might speak different mutually unintelligible languages be taught to read with or without the aid of a phonetic coding system and learn different scripts This book both implicitly and explicitly considers these and other contextual issues in relation to developmental and cognitive factors involved in Chinese literacy acquisition One of the clearest themes to emerge from this volume is that across regions Chinese children despite lack of explicit teaching of phonetic or semantic character components learn to read largely by integrating visible print sound and print meaning connections Rather than learning to read Chinese characters by rote as is sometimes mistakenly believed these children are analytic learners Chapters in this book also cover such topics as Chinese children s reading comprehension cognitive characteristics of good and poor readers and reading strategies of bilingual and biscriptal readers This book is a useful reference for anyone interested in understanding either developing or skilled reading of Chinese or for those interested in literacy learning across cultures **Essentials of Planning, Selecting, and Tailoring Interventions for**

Literacy

Development in A Multilingual Context Aydin Y. Durgunoglu,Ludo Verhoeven,2013-12-16 During the past decades literacy has gradually become a major concern all over the world Though there is a great diversity in both the distribution and degree

of literacy in different countries there has been an increasing awareness of the number of illiterates and the consequences of being illiterate. However, literacy is no longer seen as a universal trait. When one focuses on culturally sensitive accounts of reading and writing practices, the concept of literacy as a single trait does not seem very feasible. A multiplicity of literacy practices can be distinguished which are related to specific cultural contexts and associated with relations of power and ideology. As such, literacy can be seen as a lifelong context-bound set of practices in which an individual's needs vary with time and place. This volume explores the use of literacy outside the mainstream in different contexts throughout the world. It is divided into four sections. Section 1 presents an anthropological perspective analyzing the society and the individual in a society. Section 2 presents a psychological perspective focusing on the individuals themselves and analyzing the cognitive and affective development of young children as they acquire literacy in their first and second languages. Section 3 presents an educational perspective highlighting the variations in educational approaches in different societies as well as the outcomes of these approaches. Section 4 summarizes the studies presented in this volume. Both theoretical issues and educational implications related to the development of literacy in two languages are discussed. An attempt is also made to open up new directions in the study of literacy development in multilingual contexts by bringing these various disciplinary perspectives together.

Off Track Louise Spear-Swerling, 2018-03-05 The identification of poor readers as learning disabled can be the first of many steps toward consigning students to a lifetime of reading failure. The very label that is meant to help children often becomes a burden that works against effective learning throughout their schooling. In this book, the authors identify the dangers of labeling children as reading or learning disabled, contending that a reading disability is not a unitary phenomenon. In order to diagnose and help children, educators and parents need to understand the multiple sources of reading difficulty before they can choose appropriate means to correct it. Drawing on recent research in cognitive psychology, the authors present a new theoretical model of reading disability that integrates a wide variety of findings across age and grade spans. Laid out in terms that are readily comprehensible to parents and practitioners, the model outlines the phases that are characteristic of the path to proficient reading, then describes four ways in which disabled readers may stray from this path. The key to the authors' work lies in the fact that youngsters who stray from the path of typical reading acquisition often are not distinguishable from other children who are classified as poor readers rather than as learning disabled. This model is an especially useful one for practitioners because it both provides a broader view of reading disability than have many previous models and shows how reading disability relates to typical reading acquisition. Using illustrative case studies, the authors describe the four patterns of reading disability, explain how to properly assess them, and suggest ways to conquer them.
