

The 5 steps in Data Analysis

1

Determine the subject of your analysis

Think about why you want to do an analysis

2

Examine different data sources

Determine relevant data sources and compare them

3

Filter the data

Determine what information is relevant to your analysis and select only the relevant elements

4

Analyze the data

View and examine your data in a scientific manner, use the appropriate tools

5

Interpret the results

Evaluate results and find out what they are useful for, then apply your findings

Mooney, Randall J. Swift, 2021-11-15 The emphasis of this book lies in the teaching of mathematical modeling rather than simply presenting models To this end the book starts with the simple discrete exponential growth model as a building block and successively refines it This involves adding variable growth rates multiple variables fitting growth rates to data including random

elements testing exactness of fit using computer simulations and moving to a continuous setting No advanced knowledge is assumed of the reader making this book suitable for elementary modeling courses The book can also be used to supplement courses in linear algebra differential equations probability theory and statistics
