Scientific Committee on Problems of the Environment, 1977 Evaluates techniques for measuring environmental perception MAB Technical Notes, 1975 Environmental Perception and Cognitive Maps Ricardo Garcia Mira, J. Eulogio Real Deus, 2024-11-01 Perception has always been conceptualized as one of the most relevant processes within General Psychology Perception theories also constitute one of the most firmly grounded roots of psychological knowledge and their increasing scientific contribution has been recognized and used in many different disciplines and fields of research Environmental perception plays a similar role within the framework of Environmental Psychology Research and theories in environmental perception have primarily focused on the development and processing of mental representations by subjects to better interpret and understand their surroundings One of the first and principal concepts developed to investigate the mental representations of an environment is the cognitive map Since Tolman coined the term the concept of cognitive map has evolved to integrate many different sources which can influence such mental representations The first of these sources is the environment itself Studies on spatial orientation and spatial perception are primarily focused on the way that physical characteristics of the environment influence knowledge wayfinding ability or orientation capabilities of the subjects All the papers in this special issue are proof of the complexity of issues involved in understanding the nature of the relations between people and the environment as well as the large number of disciplines needed to deal with such phenomena This issue seeks to shed some light on the various aspects which may be relevant or may contribute to theoretical developments in this scientific field *Final Report*, 1978 *Environmental Policies (Routledge Revivals)* Chris C. Park, 2013-10-18 The importance of the effective management of the natural environment has become vital over the past few decades In different countries varying policies are implemented by governments to manage the environment both to foster growth and reduce pollution and destruction Employing a broad country based approach this edited collection first published in 1986 surveys the growth nature and effectiveness of the environmental management policies implemented by governments around the world The overarching argument is that a coherent international approach is needed to deal with the problems surrounding environmental sustainability This title will be of great value to students of the natural environment sustainability and resource management *Contesting Views and Changing Paradigms* Annika Dahlberg, 1994 **Environmental Psychology** Mirilia Bonnes, Gianfranco Secchiarioli, 1995-08-11 This textbook provides a clear and comprehensive introduction to the rapidly expanding field of environmental psychology The authors start with a review of the history of environmental psychology highlighting its interdisciplinary nature They trace its roots in architecture ecology and geography and examine the continuing relationship of these subjects to the psychological tradition The book

then moves through key contemporary lines of research in the field contrasting models from perception and cognition such as those of Gibson and Brunswick with major social psychological approaches as represented by Lewin Barker and others. The book concludes with an analysis of the most promising areas of research and practice. *Final Report* International Co-ordinating Council of the Programme on Man and the Biosphere, 1978. **Special Report**, 1982. *Land Degradation and Society* Piers Blaikie, Harold Brookfield, 2015-07-30. Why does land management so often fail to prevent soil erosion, deforestation, salination and flooding? How serious are these problems and for whom? This book, first published in 1987, sets out to answer these questions which are still some of the most crucial issues in development today using an approach called regional political ecology. This approach acknowledges that the reason why land management can fail are extremely varied and must include a thorough understanding of the changing natural resource base itself, the human response to this and broader changes in society of which land managers are a part. *Land Degradation and Society* is essential reading for all students of geography, agriculture, social sciences, development studies and related subjects. **Policy Implications on Environment** I. S. Kikula, 1997. Traditional methods of land management through rapid change in the name of development have led to land degradation. Resettlement during villagisation increased the human and livestock population. The concentration of this increased population into nucleated settlements and the rigid so-called land use plans meant a complete disruption of the traditional land management system. This study points towards the need for educational and awareness programs to go along with policies which have environmental implications. Rethinking the Meaning of Place Lineu Castello, 2016-03-23. The spread of newly invented places such as theme parks, shopping malls and revamped historic areas necessitates a redefinition of the concept of place from an architectural perspective. In this interdisciplinary work, these invented places are categorized according to the different phenomenological experiences they are able to provide. The book explores how such cloning spaces use placemaking and placemarketing in attempt to replicate the characteristics found in urban spaces traditionally viewed as successful and how these places can affect society's environmental perception. A range of international empirical studies illustrates how such invented places can be perceived as legitimate urban spaces and contribute towards the quality of life in today's cities. Methods and Interpretation of Environmental Perception Research, 1977. *Management of Pests and Pesticides* Joyce Tait, 2019-03-11. The contributors discuss pesticide production, distribution and use, the problems caused by pests and pesticides and the role of integrated pest management in minimizing these problems. It describes research at the international and regional level and addresses individual farmers' pesticide usage, their perceptions of pests and pesticides and the relationship of the farmers' practices and attitudes to the development of integrated pest management systems. The book concludes with a summary of research achievements and a discussion of future prospects. **Water, Development and the Environment** William James, 1992-03-24. *Water Development and the Environment* presents an impressive compilation of ideas addressing the most pressing problems facing the world today.
