3G CDMA2000 Samuel C. Yang, 2004 Breaking down complex technology into easy to understand concepts this hands on system level resource offers expert guidance in designing optimizing and managing a CDMA2000 wireless network The book focuses on the development of practical knowledge that can be readily applied in the field and also provides the theoretical background needed to effectively engineer a 3G network Offering a deeper richer treatment of critical topics than other books in this area this unique

reference concentrates on how and why the technology works in addition to providing descriptions of technology You learn the key requirements of a 3G network and the relevant CDMA2000 features that satisfy these requirements The book thoroughly explains the protocol layer framework and provides an in depth discussion of power control and handoff functionalities Additionally it delivers an extensive treatment of system performance and design addressing the important tradeoff between system coverage and capacity A chapter on network architecture clearly explains how the CDMA2000 interface works and interacts with other elements in the network as a whole Moreover the book includes a detailed presentation of 1xEV DO explaining the differences between 1xEV DO and CDMA2000 the ways both technologies operate in tandem and how 1xEV DO delivers high rate packet data services

Tactical Communications for the Digitized Battlefield Michael J. Ryan, Michael R. Frater, 2002 Traditional tactical communications systems consist of a number of separate subsystems with little interworking between them and with external sensors and weapons systems Combat net radio CNR has provided the high mobility communications required by combat troops while trunk communications systems have provided high capacity communications between headquarters at the expense of mobility The focus of this book is on new information age technologies that promise to offer seamless integration of real time data sharing creating a single logical network architecture to facilitate the movement of data throughout the battlespace Because the structure of this network is constrained by the fundamental trade off between range mobility and capacity that applies to all communications systems this network is unlikely to be based on a single network technology This book presents an architecture for this network and shows how its subsystems can be integrated to form a single logical network
