Architecture: A Very Short Introduction Ian Thompson,2014-05-29 Landscape architecture plays an important role in shaping the places in which we live and work But what is it Landscape architects are involved amongst other things in the layout of business parks the reclamation of derelict industrial sites the restoration of historic city parks and the siting and design of major pieces of infrastructure such as motorways dams power stations and flood defences as well as the planning of parks and gardens Taking a historical perspective Ian Thompson looks at both the roots of landscape architecture and the people that established it This Very Short Introduction explores some of the misconceptions about landscape architecture and considers the discipline s origins in landscape gardening Thompson takes a look at a number of areas including the influence of Modernism the difference between landscape design and landscape planning and the way that planning legislation has driven the growth of the discipline He also explores contemporary environmentalism the debate as to whether landscape architecture is an art or a science landscape architecture in the community post industrial projects and its relationship with ecological urbanism ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable Treatise on Geomorphology ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth s surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth s diverse surfaces This Treatise on Geomorphology

provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned

The Routledge Companion to Landscape Studies Peter Howard,Ian Thompson,Emma Waterton,Mick Atha,2013-02-15 Landscape is a vital synergistic concept which opens up ways of thinking about many of the problems which beset our contemporary world such as climate change social alienation environmental degradation loss of biodiversity and destruction of heritage As a concept landscape does not respect disciplinary boundaries Indeed many academic disciplines have found the concept so important it has been used as a qualifier that delineates whole sub disciplines landscape ecology landscape planning landscape archaeology and so forth In other cases landscape studies progress under a broader banner such as heritage studies or cultural geography Yet it does not always mean the same thing in all of these contexts The Routledge Companion to Landscape Studies offers the first comprehensive attempt to explore research directions into the many uses and meanings of landscape The Companion contains thirty nine original contributions from leading scholars within the field which have been divided into four parts Experiencing Landscape Landscape Culture and Heritage Landscape Society and Justice and Design and Planning for Landscape Topics covered range from phenomenological approaches to landscape to the consideration of landscape as a repository of human culture from ideas of identity and belonging to issues of power and hegemony and from discussions of participatory planning and design to the call for new imaginaries in a time of global and environmental crisis Each contribution explores the future development of different conceptual and theoretical approaches as well as recent empirical contributions to knowledge and understanding Collectively they encourage dialogue across disciplinary barriers and reflection upon the implications of research findings for local national and international

policy in relation to landscape This Companion provides up to date critical reviews of state of the art perspectives across this multifaceted field embracing disciplines such as anthropology archaeology cultural studies geography landscape planning landscape architecture countryside management forestry heritage studies ecology and fine art It serves as an invaluable point of reference for scholars researchers and graduate students alike engaging in the field of landscape studies

interesting and challenging topics highly readable Landscapes and Landforms of Eastern Canada Olav Slaymaker, Norm Catto, 2020-02-13 This critical book focuses on the geomorphological landscapes of eastern Canada and provides a companion volume to *Landscapes and Landforms of Western Canada* 2017 There are a number of unique characteristics of eastern Canada's landscapes notably its magnificent coastlines the extraordinary variety and extent of wetlands the huge Great Lakes St Lawrence basin the high incidence of meteorite craters the spectacular Niagara Falls urban karst in Montreal and Ottawa youthful glaciated karst in Ontario Newfoundland Quebec and Nova Scotia the ubiquitous permafrost terrain of Nunavut Labrador and northern Quebec and the magnificent arctic fjords and glaciers Looking at coastlines the tidal extremes of the Bay of Fundy are world renowned the structural complexity of the island of Newfoundland is less well known but produces an astounding variety of coastlines in close succession the arctic fjordlands of Baffin and Ellesmere islands and the extravagant raised beaches of Hudson Bay bear comparison with the classic fjords of Norway and the Baltic Sea raised beaches As for wetlands there are distinctive Arctic Subarctic Boreal Eastern Temperate and Atlantic wetlands and their extent is second only to those of Russia In the Hudson and James Bay regions between 75-100% of the terrestrial surface is comprised of wetlands One of North America's largest river basins the Great Lakes St Lawrence basin has its source in Minnesota straddles the USA-Canada border and debouches into Quebec as the St Lawrence River and evolves through its estuary into the Gulf of St Lawrence a journey of almost 5 000 km As far as meteorite craters are concerned 10% of the world's total are located in eastern Canada including some of the largest and most complex landforms They are preserved preferentially in the ancient Shield terrain of Quebec Finally the three million km² of permafrost controlled relief in eastern Canada serves as a reminder of the vulnerability of eastern Canada's landscapes to climate change Effects of warming are expressed through thawing of the permafrost disruption of transportation corridors and urban construction problems ever present geomorphic hazards *The Landscape Architecture Book Catalog*, 1982 Dams and Geomorphology P.J. Beyer, 2005-12-19 Dams profoundly impact the geomorphology of rivers by altering the natural patterns of water sediment and energy flow in rivers These changes have a largely negative impact on aquatic and riparian ecosystems upstream and downstream of the dam Natural dams also impact river geomorphology although with positive and negative repercussions for aquatic and riparian organisms In 2002 the 33rd Binghamton Geomorphology Symposium convened under the theme Dams and Morphology and featured invited papers and contributed posters on topics of natural dams artificial dams and dam removal Fourteen of these papers have been included in this volume *Gondwana Landscapes in southern South America* Jorge Rabassa, Cliff Ollier, 2014-04-11 This book presents extensive and new information on the geomorphology of cratonic areas of southern South America It includes valuable data relating to recurrent controversies in general geomorphology beyond the boundaries of South America and reveals the great need to integrate many different aspects of geomorphology in regional studies With the focus on ancient landscapes and especially on planation surfaces it addresses the question of what

processes could form such huge features and how they can be preserved for so long Many of the papers include maps of planation surfaces or other geomorphic units The volume brings together an up to date state of the art collection of information on South American geomorphology and shows beyond doubt that geomorphology is on the same time scale as global tectonics biological evolution and major climate change Some of the papers describe ancient geomorphological features of areas that have never been studied or published before while others describe regions which are totally unknown to the public The scope of the book extends from tropical latitudes north of the Tropic of Capricorn south to freezing Patagonia in the roaring fifties more than 3 500 km from north to south Including over one thousand citations from geological and geomorphological literature this volume will serve as a starting point for a whole new phase of studies of the fascinating landscape history of southern South America **Urban Geomorphology** Mary J Thornbush, Casey D.

Allen, 2018-07-17 **Urban Geomorphology Landforms and Processes in Cities** addresses the human impacts on landscapes through occupation urbanization and development as a contribution to anthropogenic geomorphology or anthropogeomorphology This includes a focus on land clearance conservation issues pollution decay and erosion urban climate and anthropogenic climate change These topics as well as others are considered to shed more light on the human transformation of natural landscapes and the environmental impacts and geomorphological hazards that environmental change can encompass Its multidisciplinary approach is appropriate for audiences from a range of disciplines and professions from geologists conservationists and land use planners to architects and developers **Urban Geomorphology** not only transcends disciplines but also covers varied spatial temporal frameworks and presents a diverse set of approaches and solutions to human impacts and geomorphological hazards within urban landscapes Features a cross disciplinary perspective highlighting the importance of the geosciences to environmental science engineering and public policy Focuses on the built environment as the location of concentrated human impacts and change Provides an international scope including case studies from urban areas around the world **University of Michigan Official Publication** University of Michigan, 1977
