Empiricism and Language Learnability Nick Chater,Alexander Simon Clark,John A. Goldsmith,Amy Perfors,2015 This book explores one of the central theoretical problems in linguistics learnability Written by four researchers in linguistics psychology computer science and cognitive science it sheds light on the problems of learnability and language and their implications for key theoretical linguistics and the study of language acquisition **Psychosyntax** David

Pereplyotchik,2017-10-05 This volume examines two main questions What is linguistics about And how do the results of linguistic theorizing bear on inquiry in related fields particularly in psychology The book develops views that depart from received wisdom in both philosophy and linguistics With regard to questions concerning the subject matter methodological goals and ontological commitments of formal syntactic theorizing it argues that the cognitive conception adopted by most linguists and philosophers is not the only acceptable view and that the arguments in its favor collapse under scrutiny Nevertheless as the book shows a detailed examination of the relevant psycholinguistic results and computational models does support the claim that the theoretical constructs of formal linguistics are operative in real time language comprehension These constructs fall into two categories mental phrase markers and mental syntactic principles Both are indeed psychologically real but in importantly different ways The book concludes by drawing attention to the importance of the often elided distinction between personal and subpersonal psychological states and processes as well as the logical character of dispositional and occurrent states By clarifying these concepts particularly by reference to up and running psychological and computational models the book yields a richer and more satisfying perspective on the psychological reality of language

The Human Mind through the Lens of Language Nirmalangshu Mukherji,2022-06-30 Most living forms in nature display various cognitive abilities in their behaviour However except for humans no other animal builds fires and wheels navigates with maps and tells stories to other conspecifics We can witness this unique feature of the human mind in almost everything humans do such as painting singing and cooking there is an underlying sense of unity in the generative part of these systems despite wide differences in what they are about This book introduces defends and develops a novel philosophical approach to the study of the generative mind Nirmalangshu Mukherji argues for a single species specific generative principle that accounts for the human ability to combine symbolic forms without bound in each domain that falls under the generative mind
