Language and Social Situations Joseph P. Forgas,2012-12-06 Most of our interactions with others occur within the framework of recurring social situations and the language choices we make are intimately tied to situational features Although the interdependence between language and social situations has been well recognized at least since G H Mead developed his symbolic interactionist theory psychologists have been reluctant to devote much interest to this domain until recently Yet it is arguable that a detailed understanding of the subtle links between situational features and language use must lie at the heart of any genuinely social psychology This volume contains original contributions from psychologists linguists and philosophers from the United States Canada Europe Israel and Australia who share an interest in the social psychological aspects of language Their work represents one of the first concentrated attempts to chart the possibilities of this exciting field It is perhaps in order to say a few words about the origins of this book The need for a volume integrating research on language and social situations first emerged during the 2nd International Conference of Language and Social Psychology at Bristol University in 1983 at which I was convening a symposium with a similar title at the request of the organizers Peter Robinson and Howard Giles When they first approached me with this idea in 1982 I gladly accepted since my own research on cognitive representations of social episodes seemed eminently relevant to a symposium on language and social situations

The Development of Children's Thinking Jeremy Carpendale,Charlie Lewis,Ulrich Muller,2017-11-27 The Development of Children's Thinking offers undergraduate and graduate students in psychology and other disciplines an introduction to several core areas of developmental psychology It examines recent empirical research within the context of longstanding theoretical debates In particular it shows how a grasp of classic theories within developmental psychology is vital for a grasp of new areas of research such as cognitive neuroscience that have impacted on our understanding of how children develop The focus of this book will be on infancy and childhood and it looks at Theories and context of development How developmental psychology attempts to reconcile influences of nature and nurture Communication in infancy as a precursor to later thinking Language development in primates and young children Cognitive and social development including the child's understanding of the mind How studies of moral reasoning reflect upon our understanding of development

Getting others to do things Simeon Floyd,Giovanni Rossi,N. J. Enfield, Getting others to do things is a central part of social interaction in any human society Language is our main tool for this purpose In this book we show that sequences of interaction in which one person's behaviour solicits or occasions another's assistance or collaboration share common structural properties that provide a basis for the systematic comparison of this domain across languages The goal of this comparison is to uncover similarities and differences in how language and other conduct are used in carrying out

social action around the world including different kinds of requests orders suggestions and other actions brought together under the rubric of recruitment *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),
