The Intimacy of Images Myriam Lamrani, 2025 It's been said that Oaxacans believe in images Visual manifestations of saints and loved ones are a fundamental part of life there Oaxacans also seem to have a special relationship with La Santa Muerte a female reaper like figure whose cult has grown rapidly as violence in Mexico has increased In this book Myriam Lamrani recontextualizes Santa Muerte within Mexican Catholicism by looking at how intimately devotees interact with images including effigies tattoos artworks photographs even dreams of the infamous saint For Lamrani focusing on the intimate modalities through which people interact with their images offers insight into religious social and political life as well as anthropology itself The media turn in anthropology often considers religion as mediation and media as a bridge with the divine Lamrani suggests that it is intimacy with rather than mediation through such images that make the dead be they former humans loved ones or divine entities Santa Muerte present for the living She is essentially using aesthetics and affect theory to make intimacy her theoretical frame rather than visual analysis or the media turn The manuscript has six chapters divided into three sections The first section explores what constitutes an image how to move beyond the idea of it as medium and how dreams play into these ideas Part two unpacks her ideas about intimacy particularly devotional intimacy and the very special dead loved ones and saints The final section covers how images transcend boundaries through different scales of

intimacy from an individual's devotion to their ofrenda altar to the Mexican nation's famously intimate relationship with death. A conclusion reflects on devotion to Santa Muerte in Mexico within the landscape of popular religion and political unrest and summarizes the central argument of this book that intimacy understood as a scalable index of closeness which traverses all spheres of sociality is an anthropological tool to make sense of how people understand their worlds. **Nature Inspired Optimization Techniques for Image Processing Applications** Jude Hemanth, Valentina Emilia Balas, 2018-09-19 This book provides a platform for exploring nature inspired optimization techniques in the context of imaging applications. Optimization has become part and parcel of all computational vision applications and since the amount of data used in these applications is vast the need for optimization techniques has increased exponentially. These accuracy and complexity are a major area of concern when it comes to practical applications. However these optimization techniques have not yet been fully explored in the context of imaging applications. By presenting interdisciplinary concepts ranging from optimization to image processing the book appeals to a broad readership while also encouraging budding engineers to pursue and employ innovative nature inspired techniques for image processing applications. Ancient Greek Scholarship Eleanor Dickey, 2007-04-05 Ancient Greek scholarship constitutes a precious resource for classicists but one that is underutilized because graduate students and even mature scholars lack familiarity with its conventions. The peculiarities of scholarly Greek and the lack of translations or scholarly aids often discourages readers from exploiting the large body of commentaries scholia lexica and grammatical treatises that have been preserved on papyrus and via the manuscript tradition. Now for the first time there is an introduction to such scholarship that will enable students and scholars unfamiliar with this material to use it in their work. Ancient Greek Scholarship includes detailed discussion of the individual ancient authors on whose works scholia commentaries or single author lexica exist together with explanations of the probable sources of that scholarship and the ways it is now used as well as descriptions of extant grammatical works and general lexica. These discussions and the annotated bibliography of more than 1200 works also include evaluations of the different texts of each work and of a variety of electronic resources. This book not only introduces readers to ancient scholarship but also teaches them how to read it. Here readers will find a detailed step by step introduction to the language a glossary of over 1500 grammatical terms and a set of more than 200 passages for translation each accompanied by commentary. The commentaries offer enough help to enable undergraduates with as little as two years of

Greek to translate most passages with confidence in addition readers are given aids to handling the ancient numerical systems understanding the references found in works of ancient scholarship and using an apparatus criticus including an extensive key to the abbreviations used in an apparatus Half the passages are accompanied by a key so that the book is equally suitable for those studying on their own and for classes with graded homework Self-Consciousness Masakazu Shoji,2020-02-24 A summary of author Masakazu Shoji s previous works Self Consciousness Human Brain as Data Processor explains self consciousness by using a simple mechanical model of the human brain which reflects its past development of evolution by natural selection The model was built from the information acquired from the unbiased introspective observation of Shoji s own mind and other rational assumptions In this study geared for those with a background in the research and science of psychology Shoji introduces a new approach based on systems and information science it relies on the synthetic method of study by designing the human brain s functional model It deals with the self conscious directly without adding in subconsciousness or quantum mystery as has been done previously The model was designed realistically using hardware built with genetic instructions using neurons as the elements of digital and analog operations Shoji shares that versions of this model reveal how humans acquire and store memories of images of the outside objects sense the images internally execute necessary actions directed by the images feel an emotional state by facing life s events and develop intelligence by accumulated experiences The model also explains mysterious mental experiences such as seeing dreams daydreams phantoms ghosts and feeling premonitions **Chinese Theories of Reading and Writing** Ming Dong Gu,2012-02-01 This ambitious work provides a systematic study of Chinese theories of reading and writing in intellectual thought and critical practice The author maintains that there are two major hermeneutic traditions in Chinese literature the politico moralistic mainstream and the metaphysico aesthetical undercurrent In exploring the interaction between the two Ming Dong Gu finds a movement toward interpretive openness In this the Chinese practice anticipates modern and Western theories of interpretation especially literary openness and open poetics Classic Chinese works are examined including the Zhouyi the I Ching or Book of Changes the Shijing the Book of Songs or Book of Poetry and selected poetry along with the philosophical background of the hermeneutic theories Ultimately Gu relates the Chinese practices of reading to Western hermeneutics offering a cross cultural conceptual model for the comparative study of reading and writing in general Library of Congress Subject Headings Library of Congress,2002 *State of the Arts* Jonas Tinius,2023-08-02 This is a bold and wide ranging account of the unique German public theatre system through the prism of a migrant artistic institution in the western post industrial Ruhr region State of the Arts analyses how artistic traditions have responded to social change racism and cosmopolitan anxieties and recounts how critical contemporary cultural production positions itself in relation to the tumultuous history of German state patronage difficult heritage and self cultivation through the arts Jonas Tinius fieldwork with professional actors directors cultural policy makers and activists unravels how they constitute theatre as a site for extra
