Multistable Figures Christoph F. E. Holzhey, 2014-02-14 Multistable figures offer an intriguing model for arbitrating conflicting positions Moving back and forth between different aspects one recognizes that contradictory descriptions of a situation can be equally valid and that disputes over the correct account can be settled without dissolving

differences or establishing a higher synthesis Yet the experience of a gestalt switch also offers a model for radical conversions and revolutions that is for irreversible leaps to incommensurable alternatives foiling ideals of rational choice while providing the possibility and necessity of decision Accentuating the temporal dimensions of multistable figures this multidisciplinary volume illuminates the critical potential and limits of multistability as a complex figure of thought

Model Driven Architecture and Ontology Development Dragan Gašević, Dragan Djuric, Vladan Devedžić, 2006-11-22 Defining a formal domain ontology is considered a useful not to say necessary step in almost every software project This is because software deals with ideas rather than with self evident physical artefacts However this development step is hardly ever done as ontologies rely on well defined and semantically powerful AI concepts such as description logics or rule based systems and most software engineers are unfamiliar with these This book fills this gap by covering the subject of MDA application for ontology development on the Semantic Web The writing is technical yet clear and is illustrated with examples The book is supported by a website *Ontologies for Agents: Theory and Experiences* Valentina Tamma, Stephen Cranefield, Timothy W. Finin, Steven Willmott, 2006-03-30 The volume aims at providing a comprehensive review of the diverse efforts covering the gap existing between the two main perspectives on the topic of ontologies for multi agent systems namely How ontologies should be modelled and represented in order to be effectively used in agent systems and on the other hand what kind of capabilities should be exhibited by an agent in order to make use of ontological knowledge and to perform efficient reasoning with it The volume collects the most significant papers of the AAMAS 2002 and AAMAS 2003 workshop on ontologies for agent systems and the EKAW 2002 workshop on ontologies for multi agent systems

Ontologies in Urban Development Projects Gilles Falquet,Claudine Métral,Jacques Teller,Christopher Tweed,2011-07-29 Ontologies are increasingly recognized as essential tools in information science Although the concepts are well understood theoretically the practical implementation of ontologies remains challenging In this book researchers in computer science information systems ontology engineering urban planning and design civil and building engineering and architecture present an interdisciplinary study of ontology engineering and its application in urban development projects The first part of the book introduces the general notion of ontology describing variations in abstraction level coverage and formality It also discusses the use of ontologies to achieve interoperability and to represent multiple points of view and multilingualism This is illustrated with examples from the urban domain The second part is specific to urban development It covers spatial and geographical knowledge representation the creation of urban ontologies from various knowledge sources the interconnection of urban models and the interaction between standards and domain models The third part presents case studies of the development of ontologies for urban mobility urban morphological processes road systems and cultural heritage Other cases report on the use of ontologies to solve urban development problems in construction business models building regulations and urban regeneration It concludes with a discussion of key challenges for the future deployment of ontologies in this domain This book bridges the gap between urban practitioners and computer scientists As the essence of most urban projects lies in making connections

Current Status and Future Directions T. Narock, P. Fox, 2015-07-14 The geosciences are one of the fields leading the way in advancing semantic technologies This book continues the dialogue and feedback between the geoscience and semantic web communities Increasing data volumes within the geosciences makes it no longer practical to copy data and perform local analysis Hypotheses are now being tested through online tools that combine and mine pools of data This evolution in the way research is conducted is commonly referred to as e Science As e Science has flourished the barriers to free and open access to data have been lowered and the need for semantics has been heightened As the volume complexity and

heterogeneity of data resources grow geoscientists are creating new capabilities that rely on semantic approaches Geoscience researchers are actively working toward a research environment of software tools and interfaces to data archives and services with the goals of full scale semantic integration beginning to take shape The members of this emerging semantic e Science community are increasingly in need of semantic based methodologies tools and infrastructure A feedback system between the geo and computational sciences is forming Advances in knowledge modeling logic based hypothesis checking semantic data integration and knowledge discovery are leading to advances in scientific domains which in turn are validating semantic approaches and pointing to new research directions We present mature semantic applications within the geosciences and stimulate discussion on emerging challenges and new research directions **BLL** ,1985 *Signal Processing and Machine Learning for Biomedical Big Data* Ervin Sejdic,Tiago H.
