## **Language Cohesion And Form:**

*Language, Cohesion and Form* Margaret Masterman, 2005-01-16 Margaret Masterman was a pioneer in the field of computational linguistics. Working in the earliest days of language processing by computer, she believed that meaning, not grammar, was the key to understanding languages and that machines could determine the meaning of sentences. She was able even on simple machines to undertake sophisticated experiments in machine translation and carried out important work on the use of semantic codings and thesauri to determine the meaning structure of texts. This volume brings together Masterman's groundbreaking papers for the first time. Through his insightful commentaries, Yorick Wilks argues that Masterman came close to developing a computational theory of language meaning based on the ideas of Wittgenstein and shows the importance of her work in the philosophy of science and the nature of iconic languages. Of key interest in computational linguistics and artificial intelligence, it will remind scholars of Masterman's significant contribution to the field.

New Research on Cohesion and Coherence in Linguistics Zhang Delu, Liu Rushan, 2021-09-15 The study of text cohesion and coherence has been a topic of heated discussion in Linguistics since the 1990s. Western linguists have developed two major theoretical frameworks to describe the relationship between the two concepts: one posits that cohesive devices are important means to ensure cohesion; the other argues that coherence does not rely on cohesion. Yet neither has complete explanatory power over reality nor can they solve real-life problems. This title proposes a creative, concrete and highly operational theoretical model that unites cohesion and coherence using authentic English or Chinese examples. The authors clarify the concepts of coherence and expand the scope of the research by focusing on a variety of internal and external factors such as psycho-cognitive and socio-cultural factors. Moreover, the authors propose that the new theoretical paradigm can be applied to a range of other disciplines including translation and foreign language teaching. This title has been one of the most cited works on cohesion and coherence in China. Students and scholars of discourse analysis, linguistics and language education will find this an invaluable reference.

**GECCo - German-English Contrasts in Cohesion** Kerstin Kunz, Ekaterina Lapshinova-Koltunski, José Manuel Martínez

Martínez, Katrin Menzel, Erich Steiner, 2021-10-25 In contrastive linguistics of English and German there is a tradition of accounting for contrasts with respect to grammar and to a lesser extent for lexis and phonetics Moving on to discourse and text there is a sizeable body of literature on cohesive patterns in English and German respectively but very little in terms of a comparison The latter though is of particular interest for language learners translators and of course linguists and researchers in language technology This book attempts to close this gap based on a number of years of corpus based study into variation and cohesion in the two languages While there is an overall focus on language contrasts it also investigates variation between different registers language internally and between written and spoken mode in particular For each of the five major types of cohesion co reference substitution ellipsis conjunctive relations and lexical cohesion overviews are given of contrasts in the system and of contrastive frequencies in texts Results and methods presented in this book are thus relevant for language teaching translation language technology and corpus based work on English and German generally
