Speech and Language Advances in Basic Research and Practice Volume 7 presents contributions that discuss a wide array of topics on speech and language processes and pathologies This volume contains 11 contributions focusing on a broad range of topics on speech and language Topics discussed in the book include auditory processing deficits in aphasic individuals and the factors that influence their performance the functioning of the auditory system in stutterers speech training aids for the deaf and techniques for the assessment of language abilities in children The morphological structure and mechanical properties of the vocal fold the factors which participate in determining the location of a boundary signal and its amplitude and the assessment and remediation of communication behavior in moderately retarded developmentally disabled adults are likewise covered extensively Linguists speech pathologists and other language experts will find the book very insightful and informative      *Language and Identity* Dr. Jihane Farissi, Kahimbi Siloka, Joefrey Ngha Fuh Nji, Sally Chege, Patrick Evans, 2025-04-25 TOPICS IN THE BOOK Language Issues in Morocco Nativisation of English by Third Year Students of Wildlife Management and Ecotourism The University of Namibia Katima Mulilo Campus Conceptualizing and Contextualizing Time and Other Utterances in Cameroon A Linguistic Perspective Neurolinguistic Evidence for Predictive Coding in Language Comprehension Lexical Borrowing and Cultural Identity      Attention and Vision in Language Processing Ramesh Kumar Mishra, Narayanan Srinivasan, Falk Huettig, 2015-07-13 This volume provides a comprehensive overview of the nature of attentional and visual processes involved in language comprehension Key concerns include how linguistic and non linguistic processes jointly determine language comprehension and production and how the linguistic system interfaces with perceptual systems and attention Language scientists have traditionally considered language in isolation from other cognitive and perceptual systems such as attention vision and memory In recent years however it has become increasingly clear that language comprehension must be studied within interaction contexts The study of multimodal interactions and attentional processes during language processing has thus become an important theoretical focus that guides many research programs in psycholinguistics and related fields      *Information Theory and Language* Łukasz Dębowski , Christian Bentz, 2020-12-15

Information Theory and Language is a collection of 12 articles that appeared recently in Entropy as part of a Special Issue of the same title. These contributions represent state of the art interdisciplinary research at the interface of information theory and language studies. They concern in particular Applications of information theoretic concepts such as Shannon and Rnyi entropies, mutual information and rate distortion curves to the research of natural languages. Mathematical work in information theory inspired by natural language phenomena such as deriving moments of subword complexity or proving continuity of mutual information. Empirical and theoretical investigation of quantitative laws of natural language such as Zipf's law, Herdan's law and Menzerath-Altmann's law. Empirical and theoretical investigations of statistical language models including recently developed neural language models, their entropies and other parameters. Standardizing language resources for statistical investigation of natural language. Other topics concerning semantics, syntax and critical phenomena. Whereas the traditional divide between probabilistic and formal approaches to human language cultivated in the disjoint scholarships of natural sciences and humanities has been blurred in recent years, this book can contribute to pointing out potential areas of future research cross fertilization.

**Handbook of Child Language Disorders** Richard G. Schwartz, 2017-02-03

The acquisition of language is one of the most remarkable human achievements. When language acquisition fails to occur as expected, the impact can be far reaching, affecting all aspects of the child's life and the child's family. Thus, research into the nature, causes and remediation of children's language disorders provides important insights into the nature of language acquisition and its underlying bases and leads to innovative clinical approaches to these disorders. This second edition of the Handbook of Child Language Disorders brings together a distinguished group of clinical and academic researchers who present novel perspectives on researching the nature of language disorders in children. The handbook is divided into five sections: Typology, Bases, Language Contexts, Deficits, Assessment and Intervention, and Research Methods. Topics addressed include autism, specific language impairment, dyslexia, hearing impairment and genetic syndromes and their deficits, along with introductions to genetics, speech production and perception, neurobiology, linguistics, cognitive science and research methods. With its global context, this handbook also includes studies concerning children acquiring more than one language and variations within and across languages. Thoroughly revised, this edition offers state of the art information in child language disorders together in a single volume for advanced undergraduate students and graduate students. It will also serve as a valuable resource for researchers and practitioners in speech language pathology, audiology, special education and neuropsychology, as well as for individuals interested in any aspect of language acquisition and its disorders.

**Incremental Conceptualization for Language Production** Markus Guhe, 2020-07-24

Incremental Conceptualization for Language Production discusses the simultaneous actions involved in thinking and speaking as well as the piecemeal way in which individuals construct an internal representation of the external world and use this internal representation for speaking. Author Markus Guhe presents the first computational model that captures these observations in

a cognitively adequate fashion The volume is an innovative look at the mind's process of producing semantic representations that can be transformed into language The first section of the book illustrates four stages of conceptualization construction of a conceptual representation selection of content to be verbalized linearization of the selected content and generation of preverbal messages Guhe then analyzes incremental processing processing that takes place in a piecemeal fashion and offers a blueprint of incremental models while discussing the dimensions along which the processing principles and the blueprint varies Finally incremental processing and conceptualization merge to form the incremental conceptualiser model inC The effective use of inC is demonstrated through simulations carried out with the implementation of the model Intended for researchers in cognitive science particularly cognitive modeling of language this volume will also interest researchers in artificial intelligence computational linguistics psycholinguistics and linguistics and psychology

*Ignorance of Language* Michael Devitt, 2006-04-27 The Chomskian revolution in linguistics gave rise to a new orthodoxy about mind and language Michael Devitt throws down a provocative challenge to that orthodoxy What is linguistics about What role should linguistic intuitions play in constructing grammars What is innate about language Is there a language faculty These questions are crucial to our developing understanding of ourselves Michael Devitt offers refreshingly original answers He argues that linguistics is about linguistic reality and is not part of psychology that linguistic rules are not represented in the mind that speakers are largely ignorant of their language that speakers' intuitions do not reflect information supplied by the language faculty and are not the main evidence for grammars that the rules of Universal Grammar are largely if not entirely innate structure rules of thought indeed that there is little or nothing to the language faculty Devitt's controversial theses will prove highly stimulating to anyone working on language and the mind

*Working Memory and Language* Susan E. Gathercole, Alan D. Baddeley, 2014-02-04 This book evaluates the involvement of working memory in five central aspects of language processing vocabulary acquisition speech production reading development skilled reading and comprehension The authors draw upon experimental neuropsychological and developmental evidence in a wide ranging evaluation of the contribution of two components of working memory to each aspect of language The two components are the phonological loop which is specialised for the processing and maintenance of verbal material and the general purpose processing system of the central executive A full introduction to the application of the working memory model to normal adults neuropsychological patients and children is provided in the two opening chapters Non experts within this area will find these chapters particularly useful in providing a clear statement of the current theoretical and empirical status of the working memory model Each of the following chapters examines the involvement of working memory in one specialised aspect of language processing in each case integrating the available experimental neuropsychological and developmental evidence The book will therefore be of direct relevance to researchers interested in both language processing and memory

*Working Memory and Language* is unique in that it draws together findings from normal adults brain damaged patients and children

For each of these populations working memory involvement in language processing ranging from the speech production to comprehension are evaluated Working Memory and Language provides a comprehensive analysis of just what roles working memory does play in the processing of language Biological and Behavioral Determinants of Language Development Norman A. Krasnegor, Duane M. Rumbaugh, Richard L. Schiefelbusch, Michael Studdert-Kennedy, Esther Thelen, 2014-02-25 This book presents a current interdisciplinary perspective on language requisites from both a biological comparative perspective and from a developmental learning perspective Perspectives regarding language and language acquisition are advanced by scientists of various backgrounds speech hearing developmental psychology comparative psychology and language intervention This unique volume searches for a rational interface between findings and perspectives generated by language studies with humans and with chimpanzees Intended to render a reconsideration as to the essence of language and the requisites to its acquisition it also provides readers with perspectives defined by various revisionists who hold that language might be other than the consequence of a mutation unique to humans and might fundamentally not be limited to speech *A Coursebook on Aphasia and Other Neurogenic Language Disorders, Fifth Edition* M.N.
