Linguistic Evidence Stephan Kepser, Marga Reis, 2008-08-22 The renaissance of corpus linguistics and promising developments in experimental linguistic techniques in recent years have led to a remarkable revival of interest in issues of the empirical base of linguistic theory in general and the status of different kinds of linguistic evidence in particular Consensus is growing that even so called primary data from introspection as well as authentic language production are inherently complex performance data only indirectly reflecting the subject of linguistic

theory b that for an appropriate foundation of linguistic theories evidence from different sources such as introspective data corpus data data from psycho linguistic experiments historical and diachronic data typological data neurolinguistic data and language learning data are not only welcome but also often necessary It is in particular by contrasting evidence from different sources with respect to particular research questions that we may gain a deeper understanding of the status and quality of the individual types of linguistic evidence on the one hand and of their mutual relationship and respective weight on the other The present volume is a collection of selected papers presented at the conference on Linguistic Evidence in Tbingen 2004 which was explicitly devoted to the above issues All of them address these issues in relation to specific linguistic research problems thereby helping to establish a better understanding of the nature of linguistic evidence in particularly insightful ways

Psycholinguistics (PLE: Psycholinguistics)

Alan Garnham,2013-10-23 Originally published in 1985 this title was an important new teaching text at the time Alan Garnham focuses on current theories about the central cognitive aspects of language understanding and attempts to reflect the emergence of cognitive science an inter disciplinary approach to the study of language and other cognitive processes As well as describing psychological studies the text includes ideas from linguistics artificial intelligence the philosophy of language and formal logic Some introductory remarks on the study of language understanding precede a discussion of word recognition and the computation of the syntactic structure of sentences The central part of the book is concerned with questions about meaning the mental representation of word meanings and text comprehension The final two chapters address questions of how the parts of the language processing system operate together and how language production is related to comprehension Rather than attempting an exhaustive discussion of empirical research on his chosen topics the author gives the reader the flavour of linguistic arguments In particular Psycholinguistics attempts to indicate the problems and also the possibilities of relating experimental data to theories of language processing Psycholinguistics will still be useful reading on courses in psycholinguistics language and thought and cognitive psychology
