Languages Of Nature Critical Essays On Science And Literature:

Languages of Nature L. J. Jordanova, 1986 **South of the West** Ross Gibson, 1992 some of the finest of Ross Gibson's essays across ten years of thinking about Australia Media Information Australia In this study of Western aesthetics and the politics of everyday life Ross Gibson offers provocative analyses of Australia's films and examines an array of objects and attitudes encountered in his southern locale His twelve chapters interweave to form an essay on the realignment of space time and meaning in contemporary Western societies Gibson demonstrates how these different systems of representation construct Australia **Language of Nature**, 1986 Literature and Science, 1660-1834, Part I. Volume 3 Judith

Hawley, 2024-10-28 This volume reproduces primary texts which embody the polymathic nature of the literature of science and provides editorial overviews and extensive references to provide a resource for specialized academics and researchers with a broad cultural interest in the long 18th century **Encyclopedia of Literature and Science** Pamela

Gossin, 2002-08-30 Science and literature have always been strange bedfellows Like puzzle pieces they fit because they're different Some of the greatest works of world literature have been inspired by the marvels of the scientific world Scientists have written works of the imagination Even formal scientific writings have been known to employ rhetoric There is a tendency to think of literature and the humanities in general as having little to do with science Yet scholars have conducted fruitful studies of the history and philosophy of science With the rise of technology scholars have also applied scientific analysis to the study of literature and the creative process The intersection of scientific and humanistic inquiry is finally being mapped This volume includes more than 650 A-Z entries on topics and themes in science and literature significant writers key scientists seminal works and important theories and methodologies This reference defines the rapidly emerging interdisciplinary field of literature and science An introductory essay traces the history of the field its growing reputation and the current state of research Broad in scope the volume covers world literature from its beginnings to the present day and illuminates the role of science in literature and literary studies A wide range of experts contributed entries to this volume each of which concludes with a brief bibliography The entire volume closes with a list of works for further reading

Literature and Science, 1660-1834, Part II vol 8 Judith Hawley, 2024-10-28 This volume reproduces primary texts which embody the polymathic nature of the literature of science and provides editorial overviews and extensive references to provide a resource for specialized academics and researchers with a broad cultural interest in the long 18th century

Literature & Medicine During the Eighteenth Century Marie Mulvey Roberts, Roy Porter, 2022-10-10 First published in 1993 *Literature Medicine During the Eighteenth Century* analyses the close interplay of medicine and literature by paying special attention to questions of body language and the representation of inner life Although today medicine and literature are widely seen as falling on different sides of the two cultures divide this was not so in the eighteenth century when doctors scientists writers and artists formed a well integrated educated elite Locke Smollett and Goldsmith were doctors and

physicians such as Erasmus Darwin doubled as poets Written by leading historians of medicine and eighteenth century literary critics this book uncovers the interconnections between medical and psychological theory and ideas of taste beauty and genius Its contributors explore the rich cultural milieu of the period and investigate the ways in which medicine itself contributed to informing a gendered discourse of the world This book will be of interest to historians literary scholars and medical historians

Representations of the Post/human Elaine L. Graham, 2002 This work draws together a wide range of literature on contemporary technologies and their ethical implications It focuses on advances in medical reproductive genetic and information technologies

Inventing the American Primitive Helen Carr, 1996-07 Inventing the American Primitive examines a body of work both literary and anthropological that describes inscribes translates and transforms Native American myths and poetry Drawing on post colonial and feminist theory as well as ethnography s recent textual turn Carr reveals the conflicts and ambivalence in these texts Through their writings the writers and anthropologists studied were attempting to preserve a culture which their country with their help or connivance sought to destroy The contradictions and tensions of this position run throughout their work Although there is no simple narrative of progress in this story as it moves from the eighteenth century primitivism to twentieth century modernism the book shows the process by which the richness and complexity of Native American traditions came to be acknowledged

Lost Words L. S. Jacyna, 2009-08-16 In the mid nineteenth century physicians observed numerous cases in which individuals lost the ability to form spoken words even as they remained sane and healthy in most other ways By studying this condition which came to be known as aphasia neurologists were able to show that functions of mind were rooted in localized areas of the brain Here L S Jacyna analyzes medical writings on aphasia to illuminate modern scientific discourse on the relations between language and the brain from the very beginnings of this discussion through World War I Viewing these texts as literature complete with guiding metaphors and rhetorical strategies Jacyna reveals the power they exerted on the ways in which the human subject was constructed in medicine Jacyna submits the medical texts to various critical readings and provides a review of the pictorial representation involved with the creation of aphasiology He considers the scientific experimental and clinical aspects of this new field together with the cultural professional and political dimensions of what would become the authoritative discourse about language and the brain At the core of the study is an inquiry into the processes whereby men and women suffering from language loss were transformed into the aphasic an entity amenable to scientific scrutiny and capable of yielding insights about the fundamental workings of the brain But what became of the subject s human identity Lost Words explores the links among language humanity and mental presence that make the aphasiological project one of continuing fascination

Breeding Jenny Davidson, 2023-05-09 The Enlightenment commitment to reason naturally gave rise to a belief in the perfectibility of man Influenced by John Locke and Jean Jacques Rousseau many eighteenth century writers argued that the proper education and upbringing breeding could make any man a member of the cultural elite Yet even in this egalitarian

environment the concept of breeding remained tied to theories of blood lineage caste distinction and biological difference Turning to the works of Locke Rousseau Swift Defoe and other giants of the British Enlightenment Jenny Davidson revives the debates that raged over the husbandry of human nature and highlights their critical impact on the development of eugenics the emergence of fears about biological determinism and the history of the language itself Combining rich historical research with a keen sense of story she links explanations for the physical resemblance between parents and children to larger arguments about culture and society and shows how the threads of this compelling conversation reveal the character of a century A remarkable intellectual history Breeding not only recasts the fundamental concerns of the Enlightenment but also uncovers the seeds of thought that bloomed into contemporary notions of human perfectibility Companion to the History of Modern Science G N Cantor,G.N. Cantor,J.R.R. Christie,M.J.S. Hodge,R.C. Olby,2020-10-07 The 67 chapters of this book describe and analyse the development of Western science from 1500 to the present day Divided into two major sections The Study of the History of Science and Selected Writings in the History of Science the volume describes the methods and problems of research in the field and then applies these techniques to a wide range of fields Areas covered include the Copernican Revolution Genetics Science and Imperialism the History of Anthropology Science and Religion Magic and Science The companion is an indispensable resource for students and professionals in History Philosophy Sociology and the Sciences as well as the History of Science It will also appeal to the general reader interested in an introduction to the subject

Sympathy, Sensibility and the Literature of Feeling in the Eighteenth Century I. Csengei,2011-12-13 What makes it possible for self interest cruelty and violence to become part of the benevolent compassionate ideology of eighteenth century sensibility This book explores forms of emotional response including sympathy tears swoons and melancholia through a range of eighteenth century literary philosophical and scientific texts **Uncommon Contexts: Encounters between Science and Literature, 1800-1914** Ben Marsden,Hazel Hutchinson,Ralph O'Connor,2016-09-12 Britain in the long nineteenth century developed an increasing interest in science of all kinds Whilst poets and novelists took inspiration from technical and scientific innovations those directly engaged in these new disciplines relied on literary techniques to communicate their discoveries to a wider audience The essays in this collection uncover this symbiotic relationship between literature and science at the same time bridging the disciplinary gulf between the history of science and literary studies Specific case studies include the engineering language used by Isambard Kingdom Brunel the role of physiology in the development of the sensation novel and how mass communication made people lonely *Romantic Dynamics* M. Lussier,1999-10-11 Romantic Dynamics creatively collides English poetry with a wide range of exotic concepts associated with the new physics of relativity and quantum to uncover their shared concerns for indeterminacy uncertainty relativity and complexity in a chaotic universe This interdisciplinary work traces the elaboration of dynamical models of cosmos and consciousness in works by Blake Byron Coleridge the Shelleys and Wordsworth finding in those works an exploration of the interpenetration of psyche and

phenomena This model the author argues establishes a new metaphoric terrain liberated from the classical mechanics of Newtonian thought and more easily traversed with models articulated by Bohr Einstein and Hawking The Figure of Consciousness Jill M. Kress, 2013-08-21 Through analysis of metaphors of consciousness in the philosophy and fiction of William James Henry James and Edith Wharton this work traces the significance of representations of knowledge gender and social class revealing how writers conceived of the self in modern literature **The Language of Science** Ilse N. Bulhof, 1992-09-01 The existence of a separation between science and literature has long been taken for granted This study shows that in science language functions in very much the same way as in literature it is rhetorical in that it persuades readers to the author's point of view and it is poetical in that with its metaphors and other figures of speech it shapes the experience of author and reader The separation between science and literature proves to be untenable This has important ontological implications science can no longer be considered an action performed by a speaking subject on a mute object Does the creative role of language in science mean that human beings create the world The author emphatically rejects a conclusion which would degrade nature to mere malleable material at the mercy of human beings A hermeneutical model for the relationship between knower and known is suggested creative interaction between reader and text The reader's responses actualise a text's meaning in like manner scientists give their responses to reality by actualising one of many possibilities The hermeneutical ontology proposed in this book steers away from the rocks of realism and anti realism

The Sciences in Enlightened Europe William Clark, Jan Golinski, Simon Schaffer, 1999-07 Radically reorienting our understanding of the Enlightenment this book explores the complex relations between enlightened values and the making of scientific knowledge Here monsters and automata barometers and botanical gardens polite academics and boisterous clubs plans for violent wars and for universal peace are all relocated in the landscape of enlightened Europe The contributors show how changing forms of discipline machinery and instrumentation affected the emergence of new kinds of knowledge consider how institutions of public taste and conversation helped provide a common frame for the study of human and nonhuman natures and explore the regional operations of scientific culture at the geographical fringes of Europe Covering a wide range of scientific disciplines both in the principal European countries and in areas peripheral to Europe the book also includes ample illustrations and an extensive bibliography Implicated in the rise of both fascism and liberal secularism the moral and political values that shaped the Enlightenment remain controversial today Through careful scrutiny of how these values influenced and were influenced by the concrete practices of its sciences this book gives us an entirely new sense of the Enlightenment from back cover *Four Augustan Science Poets: Abraham Cowley, James Thomson, Henry Brooke, Erasmus Darwin* Richard Hillyer, 2020-04-30 Focusing on four poets who because of their distinctive profiles illustrate especially well the opportunities and pitfalls of writing science poetry during the long eighteenth century *Four Augustan Science Poets* Abraham Cowley James Thomson Henry Brooke Erasmus Darwin offers numerous close readings that shed light not only on

standard versions of the sublime but also on these idiosyncratic variants the apologetic Abraham Cowley the illicit James Thomson the perverse Henry Brooke and the atheistic Erasmus Darwin Recurrent concerns include the similarities and differences among the languages of poetry science and religion Of the poets analyzed all but Thomson wrote extensive notes to accompany their lines permitting further comparison of languages in this case between the same authors poetry and prose

Rhyming Reason Michelle Faubert, 2015-10-06 During the Romantic era psychology and literature enjoyed a fluid relationship Faubert focuses on psychologist poets who grew out of the literary medical culture of the Scottish Enlightenment They used poetry as an accessible form to communicate emerging psychological cultural and moral ideas
