**Memory in a Social Context** Takashi Tsukiura, Satoshi Umeda, 2017-12-15 This book explores new points of view of human memory in the link among mind brain and society Research of human memory traditionally has been in the field of experimental psychology and a number of psychological researchers have come upon important findings regarding human memory They have provided critical theories to explain human memory processes but this approach is hitting a brick wall The experimental psychological approach or laboratory based approach to human memory functions is examined in a very controlled environment but the evidence obtained from this approach may not necessarily reflect real life events in our mind In addition findings from experimental psychology have often ignored the link with biological structures or the brain One solution is a cognitive neuroscience approach in which functional neuroimaging techniques have enabled us to view how memory processes are represented in the brain In addition the new approach extends the traditional concept of human memory into a wider framework by reconsidering memory functions in a social context These advanced approaches help us to understand how social memory is represented in the human brain and is processed in real life situations The work reported in this volume is at the forefront of cognitive neuroscience in the research of human memory in a social context and the potential application of memory research This book will help to motivate young scientists and graduate and undergraduate students in psychology and neuroscience
