activities **New Directions in Memory and Aging (PLE: Memory)** Leonard W. Poon, James Fozard, Laird S. Cermak, David Arenberg, Larry W. Thompson, 2014-05-09 Originally published in 1980 this book contains the proceedings from a memorial conference held in honour of George A Talland who made a significant contribution to the area of memory and aging The major objective of the volume was to stimulate research towards a more comprehensive understanding of age related differences in memory It was also hoped it would provide direction for the application and utilization of research findings in the evaluation and treatment of memory complaints and memory difficulties experienced by the elderly The book was intended for two broad groups of scientists The first being researchers in the psychology of memory and those who were currently active in the research on aging at the time The second group was those concerned with applying current research findings to the diagnosis and treatment of problems of memory **Memory, Attention, and Aging** Fergus Craik, 2016-10-26 Memory Attention and Aging is a collection of some of the most influential journal articles previously published by Fergus Craik and his collaborators with new introductory material unifying the research of this noted cognitive psychologist The reprinted articles are grouped into six sections reflecting Craik s various research interests across his career The first section on short term memory focuses on research concerns Craik uncovered in the 1970s but are still valid today They comprise theoretical suggestions and data on the nature of STM including the notion that working memory may be defined as attention paid to features of items held in conscious awareness The second section on levels of processing contains the very influential articles by Craik Lockhart and by Craik Tulving on memory research in addition to a later article in which Craik gives a critical account of the LOP work Craik s third interest is in cognitive aging The section contains two articles from the 1980s in which Craik lays out his ideas on age related changes in memory plus a more recent article addressing lifespan changes in cognition The fourth section on attention and memory has two articles that report on the effects of divided attention on subsequent memory and differences between implicit and explicit memory processes The fifth section on cognitive neuroscience includes an early PET study probing neural correlates of LOP and a study searching for the neural correlates of the self concept Finally the sixth section contains an article on bilingualism that explores age related differences in executive functions as a consequence of bilingualism and a study showing that bilingualism postpones the onset of Alzheimer s disease Grouping the most highly cited and groundbreaking articles of Fergus Craik in one volume this book will be of interest to a wide spectrum of students and professional researchers Handbook of the Psychology of Aging James E. Birren, K Warner Schaie, 2011-04-27 The Handbook of the Psychology of Aging 6e provides a comprehensive summary and evaluation of recent research on the psychological aspects of aging The 22 chapters are organized into four divisions Concepts Theories and Methods in the Psychology of Aging Biological and Social Influences on Aging Behavioral Processes and Aging and Complex Behavioral Concepts and Processes in Aging The 6th edition of the Handbook is considerably changed from the previous edition Half of the chapters are on new topics and the remaining half are on

returning subjects that are entirely new presentations by different authors of new material Some of the exciting new topics include Contributions of Cognitive Neuroscience to Understanding Behavior and Aging Everyday Problem Solving and Decision Making Autobiographical Memory and Religion and Health Late in Life The Handbook will be of use to researchers and professional practitioners working with the aged It is also suitable for use as a textbook for graduate and advanced undergraduate courses on the psychology of aging The Handbook of the Psychology of Aging Sixth Edition is part of the Handbooks on Aging series including Handbook of the Biology of Aging and Handbook of Aging and the Social Sciences also in their 6th editions Clinical Neurology of Aging Martin L. Albert, Janice E. Knoefel, 1994 This thorough revision of a well

established text presents essential information on the neurobiology of aging There are new chapters on competency and ethics problems of daily living psychopharmacology and stability and falls Written in an accessible style this book will be invaluable to clinicians and neurologists who treat elderly patients **Theoretical Perspectives on Cognitive Aging**

Timothy A. Salthouse, 2016-03-23 The phenomenon of age related cognitive decline has long been controversial both in terms of mere existence and with respect to how it is explained Some researchers have dismissed it as an artifact of declining health or lower levels of education and others have attributed it to general changes occurring in the external environment Still other interpretations have been based on the use it or lose it principle known as the Disuse Hypothesis or on the idea that there are qualitative differences in either the structure or the process of cognition across the adult years Perhaps the most popular approach at present relies on the information processing perspective and attempts to identify the critical processing component most responsible for age related differences in cognition The primary purposes of this book are first to review the evidence of age related differences in cognitive functioning and then to evaluate the major explanations proposed to account for the negative relations between age and cognition that have been established Included is a discussion of theoretical dimensions and levels of scientific theorizing assumed to be helpful in understanding and evaluating alternative perspectives on cognitive aging The various perspectives are then covered in detail and analyzed The text concludes with observations about the progress that has been made in explaining cognitive aging phenomena plus recommendations for research practices that might contribute to greater progress in the future **Aging and Cognition** E.A.

Lovelace, 1990-12-11 Presented in this volume is a discussion of current literature and theoretical issues relating to three aspects of late life age related cognitive change Firstly evidence regarding aging and the basic mental processes of attention motor control memory language problem solving and intelligence are presented Secondly the role of personal traits such as personality and self efficacy in the aging of cognitive function are developed along with self awareness of cognitive processes and age changes in the monitoring of these processes Thirdly consideration is given to the study of interventions to delay or remediate the cognitive declines of aging Gerontechnology Herman Bouma, Jan A. and Human Cognition John T. E. Richardson, Randall W. Engle, Lynn Hasher, Robert H. Logie, Ellen R. Stoltzfus, Rose T. Zacks, 1996-05-16 This new volume in the Counterpoints series compares and contrasts different conceptions of working memory generally recognized as the human cognitive system responsible for temporary storage of information The book includes proponents of several different views Robert Logie discusses the theoretical and empirical utility of separating working memory into an articulatory loop a phonological store and a visuo spatial sketchpad into visual and spatial subsystems Patricia Carpenter provides evidence for a process view of working memory arguing that both task specific processing and general processing capabilities can account for the full range of working memory phenomena She focuses on findings from reading comprehension and memory tasks suggesting that working memory is used to represent the set of skills and strategies necessary for complex tasks while retaining residual capacity for use as a storage buffer Lynn Hasher argues in favor of the new inhibitory model with evidence drawn from the literature on aging and pathology that demonstrates parallels between memory disorders and normal memory functioning Randall Engle addresses the issue of whether working memory resources are required for retrieval of information or whether that task is relatively automatic Engle's empirical studies in turn bear directly on the positions of Carpenter Hasher and Logie As interest in working memory is increasing at a rapid pace an open discussion of the central issues involved is both useful and timely This work serves this purpose for a wide audience of cognitive psychologists and their students

Memory Change in the Aged David F. Hulstsch, 1998-11-13 Do memory abilities decline with aging Are changes in memory universal or differential Do they occur similarly or differently for all types of memory and to all aging persons These are some of the principal questions explored in the Victoria Longitudinal Study and presented in this volume Although there is a tremendous amount of research comparing the memory performance of younger and older adults very few studies have followed the same older adults over time Only through the use of such longitudinal methods can one directly observe changes in memory functioning with aging This monograph reports longitudinal data following the same individuals over a six year period The authors consider a variety of theoretical and methodological issues related to memory and aging

Memory Improved Bonnie J.F. Meyer, Carole J. Young, Brendan J. Bartlett, 2014-02-24 This unique text presents a systematic study of a proven method for increasing the memory and reading comprehension of older adults by using a program based on discourse processing The program facilitates the encoding and retrieval of information through a reading strategy plan utilizing top level structures in the text The authors of this volume provide student and teacher training manuals for the program as well as a review of the literature data tables and graphs an extensive bibliography and five 1 1 2 hour sessions to improve memory and reading comprehension *Memory in Everyday Life* G.M. Davies, R.H. Logie, 1993-08-25 The last decade has seen a major growth in research on how memory is used in everyday life This volume represents a reaction to traditional laboratory bound studies of the first half of the century which sought to identify the fundamental principles of learning and memory through the use of materials and methods totally divorced from the real world The new wave of memory research has had considerable success in charting how memory develops the role it plays in educational and social skills and the impact of memory impairment on mental life The current volume consists of authoritative reviews of this emerging area linked to comment and criticism from major researchers in the field Contrasted probably for the first time are two major styles of research in applied memory research The naturalistic approach which has sought to study memory in everyday environments using actual experiences from people's lives as the raw data from which to derive more general principles and the applied cognitive approach whereby theories and methods are developed using orthodox laboratory techniques which are then validated by applying them directly to real phenomena This is one of the few books to bring together evidence across the very wide spectrum of humdrum activity that constitutes the everyday uses of memory **Memory** Elizabeth Ligon Bjork, Robert A. Bjork, 1996-09-18 Memory conveys the state of knowledge regarding human memory This book is composed of seven parts beginning with a discussion on different memory structures and the processes that regulate the flow of information between those structures A chapter follows on the distinction between explicit and implicit memory Other chapters address the different aspects of storing information in long term memory how information in long term memories is accessed and the controlling and monitoring of such storage and retrieval processes How memory capacities and characteristics vary as a function of individual differences and aging as well as the implications of memory research for two real world domains of strong interest witness interrogation and testimony and the long term retention of skills and knowledge are also addressed This handbook will be an important resource for students of human memory *The Handbook of Aging and Cognition* Fergus I.M. Craik, Timothy A. Salthouse, 2011-03-15 Cognitive aging is a flourishing area of research A significant amount of new data a number of new theoretical notions and many new research issues have been generated in the past ten years This new edition reviews new findings and theories enables the reader to assess where the field is today and evaluates its points of growth The chapters are organized to run from reviews of current work on neuroimaging neuropsychology genetics and the concept of brain reserve through the mainstream topics of attention

memory knowledge and language to a consideration of individual differences and of cognitive aging in a lifespan context This edition continues to feature the broad range of its predecessors while also providing critical assessments of current theories and findings
