**Unravelling the Evolution of Language** Rudolf P. Botha,2021-11-22 What blocks the way to a better understanding of language evolution it is widely held is above all a paucity of factual evidence Not so argues *Unravelling the Evolution of Language* This book finds the main obstacle instead in a poverty of a specific kind of theory restrictive theory It shows too that this poverty of restrictive theory is one of the root causes of the paucity of factual evidence *Unravelling* takes it that a theory of a thing T for example language is restrictive if it gives us a basis for distinguishing T in a non arbitrary way from all things that are in fact distinct from it including those that happen to be related to it The book then argues in detail that much of the recent work on language evolution proceeds from loose assumptions rather than restrictive theories about a number of crucial things The entities prelinguistic or linguistic that are believed to have undergone evolution the processes by which these entities are believed to have evolved the ways in which these pre linguistic entities link up with entities that are believed to be correlates of them the sources of data that are believed to yield indirect evidence about the evolution of language and the factors that add to or subtract from the scientific substance of accounts of language evolution In support of its main argument *Unravelling the Evolution of Language* puts forward detailed analyses of various recent accounts of language evolution including co optionist accounts by Noam Chomsky Stephen Jay Gould Massimo Piattelli Palmarini and Lyle Jenkins preadaptationist accounts by Philip Lieberman Wendy Wilkins Jenny Wakefield Andrew Carstairs McCarthy William Calvin and Derek Bickerton adaptationist accounts by Steven Pinker Paul Bloom and others This means that *Unravelling* as it builds its main argument also offers an appraisal of some significant contributions to recent work on language evolution

**Virtual Teacher** Boris Aberšek,Janez Bregant,2014-10-17 Today in the age of technology contemporary researchers from the fields of philosophy cognitive science neurobiology and artificial intelligence ask many questions about the nature of the mind and body originating in ancient Greek philosophy Among those are also questions about the relationship between humans and machines and the implications this carries for solving traditional problems within philosophy In this book the term machine is taken to refer to every system which in the contemporary world tries to make a task easier for humans or even tries to

replace the human altogether such as a humanoid robot able to perform different physical activities as well as various mental activities like decision making and problem solving The volume makes the first step towards a connection between certain different disciplines involved in education The gap between neurochemistry cognitive science neurobiology and other rapidly developing disciplines on one side and education as part of social sciences on the other currently appears to be great and even unbridgeable except by analogy metonymy and metaphor From the experiences of recent years it seems clear that the existing educational system as a whole is perceived as an ailing system that fails to meet the needs of a major portion of the society it serves This book brings to attention a form of learning that transcends logic and rhetorical appeal It defines appropriate architecture on the basis of cognitive science and methods of artificial intelligence taking into account that a school system is a dynamical system which follows the dynamical systems theory The volume shows how to build an intelligent tutoring system and an intelligent teaching learning system upon it Through the use of intelligent tutoring systems students are placed in an active role as opposed to the passive role that they more or less have today

**A Way Through the Global Techno-Scientific Culture** Sheldon Richmond,2020-04-07 Computers are supposed to be smart yet they frustrate both ordinary users and computer technologists Why are people frustrated by smart machines Computers don t fit people People think in terms of comparisons stories and analogies and seek feedback whereas computers are based on a fundamental design that does not fit with analogical and feedback thinking They impose a binary an all or nothing approach to everything Moreover the social world and institutions that have developed around computer technology hide and reinforce the lack of alignment between computers and people This book suggests a solution we do not have to accept the way things are now and work around the bad social and technical design of computers Rather it proposes a diverse distributed critical discussion of how to design and build both computer technology and its social institutions
