Attention has focused on **Recent Advances in Edible Fats and Oils Technology** Yee-Ying Lee,Teck-Kim

Tang, Eng-Tong Phuah, Oi-Ming Lai, 2022-03-15 This book is written by international experts with both academic and industrial credentials. It presents for the first time a collection of up to date scientific advances in the area of edible fats and oils technology over a span of 10 years from 2009 to the year 2019. The book covers the existing and recent advanced techniques adopted in the edible fats and oils research and touches on the processing and modification to the traceability and sustainability issues of fats and oils. Some recent technologies like supercritical carbon dioxide microwave ultrasound and enzymatic assisted processes, ionic liquid enzymatic processes, biosensor and membrane technology are presented in the book. The book aims to provide the technologists and researchers in research development and operations in the edible fats and oils industries with critical and readily accessible information on the recent advances in the field. The book is divided into three broad sections: Fats and Oils Chemistry and Processing, Fats and Oils Modification and Health Implications, and Fats and Oils Safety. Social, Environmental and Economic Impacts. It is an extremely comprehensive and valuable resource which serves as an essential reference for students and lipid scientists from academia or industry.

**The Chemistry of Food Additives and Preservatives** Titus A. M. Msagati, 2012-12-17 Chemistry of Food Additives and Preservatives. Food additives are chemicals or ingredients that are added to food during processing to improve quality, flavour, appearance or nutritional value or to prevent chemical or microbial spoilage. The most common types of additives are preservatives, colourants, sweeteners, flavourings, emulsifiers, thickeners and stabilisers. Adding new ingredients to a food has an effect upon its chemistry and structure as well as its sensory characteristics. Additives are usually characterised by where they come from, for example, whether they are natural or synthetic, by their purpose, such as improving shelf life, and the risks associated with them, such as their toxicity and any side effects upon the consumer. Although in recent years the trend in consumer marketing has been to trumpet a lack of additives and preservatives, with artificial ingredients commonly seen in a negative light, there nevertheless remains a wide variety of additives and preservatives that are crucial both to producers and consumers without which the quality of the food would suffer. Chemistry of Food Additives and Preservatives is an up to date reference guide to the wide range of different types of additives used in the food industry today. It looks at the processes involved in adding preservatives and additives to foods and the mechanisms and methods used. The book provides full details about the chemistry of each major class of food additive, showing the reader not just what kind of additives are used and what their functions are, but also how they work and how they may have multiple functionalities. This book also covers numerous new additives currently being introduced, how the quality of these is ascertained and how consumer safety is ensured. Chemistry of Food Additives and Preservatives is an ideal reference for food chemists, food safety specialists and agencies, food processors who are working with additives and preservatives, and food regulators and policy makers. Written in an accessible style and covering a broad range of food additives and preservatives, the book offers an in depth analysis of the chemical interactions of food additives and preservatives with the natural composition of the foods to which they are added. It is a

unique and ground breaking treatment of a topic vital to both the food industry and the researcher **Food Processing**,2004 **Nutraceutical and Specialty Lipids and their Co-Products** Fereidoon Shahidi,2006-03-14 While certain saturated and trans fats continue to face scrutiny as health hazards new evidence indicates that in addition to supplying foods with flavor and texture fats also provide us with dietary components that are absolutely critical to our well being The importance of essential fatty acids and fat soluble vitamins and other minor **Natural Product Extraction 2nd edn** Mauricio A.
