Feature Distribution in Swedish Noun Phrases Kersti Borjars, 1999-01-26 This book examines in some detail two issues associated with Swedish noun phrases Firstly it considers the issue of the headedness of these phrases in the light of a general discussion of criteria for head status Secondly the status of the definite ending is discussed from a typological perspective Based on the findings of this examination of the data a theoretical account of Swedish noun phrases is provided in terms of Head driven Phrase Structure Grammar

Noun Phrases in Australian Languages Dana Louagie, 2019-11-18 This book presents a first comprehensive typological analysis of noun phrases in Australian languages covering the domains of classification qualification quantification determination and constituency The analysis is based on a representative sample of 100 languages Among other points the results call into question the classic idea that Australian languages tend to lack phrasal structures in the nominal domain with over two thirds of the languages showing evidence for phrasehood Moreover it is argued that it may be more interesting to typologise languages on the basis of where and how they allow phrasal structure rather than on the basis of a yes no answer to the question of constituency The analysis also shows that a determiner slot can be identified in about half of the languages even though they generally lack classic determiner features like obligatory use in particular contexts or a restriction to one determiner per NP Special attention is given to elements which can be used both inside and beyond determiner slots demonstrating how part of speech and functional structure do not always align The book is of interest to researchers documenting Australian languages as well as to typologists and theorists

Demonstratives and Definite Articles as Nominal Auxiliaries Dorian Roehrs, 2009-02-18 Written in the cartographic tradition this monograph is concerned with the inner structure and derivation of noun phrases It proposes that demonstratives and definite articles are similar to auxiliaries in the clause Referencing mostly Germanic languages the book argues that determiners are base generated below adjectives and subsequently move to the left periphery in a successive cyclic fashion Demonstrating that determiners are complex elements it is proposed that languages vary with regard to when and what part of the determiner they move This provides a novel account of the variation in the Scandinavian noun phrase With various copies left behind by moving the determiner the restrictive and non restrictive readings of adjectives and relative clauses are suggested to follow from the interpretation of these different copies The system is extended to the strong and weak adjective inflections in German Proposing that determiners are auxiliaries in the nominal domain explains these apparently unrelated data in a uniform way

The Norwegian Nominal System Madeleine Halmøy, 2016-09-26 This study presents a unified economic account of the intricate relationship between form meaning and interpretation in the Norwegian nominal system without reference to polysemy It covers all kinds of nominal signs i e nouns adjectives pronouns and determiners as well as the conventionalised syntactic combinations between them Among its central innovations is the introduction of the feature

general number into Norwegian morphology *Nominal Phrases from a Scandinavian Perspective* Marit Julien, 2005-01-01
This monograph presents a new model of the internal syntax of nominal phrases. The model is mainly based on Scandinavian since with the wide range of variation that Scandinavian displays in the nominal domain despite the close genetic relationship between the different varieties. Scandinavian is particularly well suited for explorations into nominal syntax. Among the topics covered are the basic syntactic structure of nominal phrases, definiteness, adjective phrases, possessors, relative clauses and nominal predicates. The model is however meant to be a tool for analysing the nominal phrases of any language. While the base generated structure is taken to be universally uniform, the model allows for variation in the feature makeup of individual elements in the phonological realisation of the features and in the movements that may or may not apply. Hence as shown in the final chapter, patterns found in languages outside of Scandinavian can also be accounted for within the model. Vannestål, 2004 **Copular Sentences in Russian** Asya Pereltsvaig, 2007-05-11 This book provides a detailed study and a novel Minimalist account of copular sentences in Russian focusing on case marking alternations nominative vs instrumental and drawing a distinction between two types of copular sentences On the assumption that Merge is defined in the simplest way possible it is argued that not all syntactic structures are anti symmetrical One of the copular sentence types is analyzed as a poster child for symmetrical structures while the other type is treated as asymmetrical The originality of this study lies

in treating the copula in the two types of copular sentences neither as completely identical nor as two distinct lexical items instead the two types of copula are derived through the process of semantic bleaching Furthermore it is argued that the two types of the copula need to combine with post copular phrases of different categories It is concluded that Russian draws a distinction between saturated DPs and unsaturated NPs in spite of its renowned lack of overt articles **Perspectives on Classifier Constructions in Sign Languages** Karen Emmorey,2003-04-02 This text is the result of work discussed and presented at the Workshop on Classifier Constructions It aims to bring to light issues related to the study of classifier constructions and to present contemporary linguistic and psycholinguistic analyses of these constructions
