Features Events And Processes FEPs For Geologic Disposal Of Radioactive Waste:

Features, Events and Processes (FEPs) for Geologic Disposal of Radioactive Waste OECD Nuclear Energy Agency, 2000
This report provides an international compilation of Features Events and Processes FEPs as well as a basis for selecting the FEPs that should be included in safety analyses of radioactive waste disposal sites Geological Disposal of Radioactive Waste Commission of the European Communities, OECD Nuclear Energy Agency. Co-ordinating Group on Geological Disposal of Radioactive Waste, 1984 **Key Topics in Deep Geological Disposal : Conference Report** Fanghaenel, Susanne, 2015-05-22 **Geologic Factors in the Isolation of Nuclear Waste** Susan J. Mara, 1980 Progress Towards Geologic Disposal of Radioactive Waste: where Do We Stand?, 1999 **Geological Disposal of Radioactive Waste** OECD Nuclear Energy Agency. Co-ordinating Group on Geological Disposal of Radioactive Waste, 1982 GEOLOGICAL DISPOSAL OF RADIOACTIVE WASTE: AN OVERVIEW OF THE CURRENT STATUS OF UNDERSTANDING AND DEVELOPMENT. OECD Nuclear Energy Agency, 1984 Establishing and Communicating Confidence in the Safety of Deep Geologic Disposal : Approaches and Arguments Douglas Earle Metcalfe, Geochemical Processes, 1982 Office of Geologic Repositories [sic] Issues for a Mined Geologic Disposal System United States. Department of Energy. Office of Civilian Radioactive Waste Management, 1986 Geological Disposal of Spent Fuel and High Level and Alpha Bearing Wastes International Atomic Energy Agency, 1993 Proceedings of a symposium organized jointly with CEC and OECD NEA Antwerp Belgium 19 23 October 1992 The purpose of the symposium was to review the progress being made in national and international programmes towards the demonstration of safe disposal of radioactive wastes The technical presentations addressed disposal in all the principal geological media currently under consideration clay crystalline rock salt and volcanic tuff The programmes described ranged from national screening surveys on a broad regional scale to detailed site specific investigations in underground research laboratories **Papers Presented at the Nuclear Energy Agency/Organization for Economic Cooperation and Development. (NEA/OECD) Coordinating Group on Geologic Disposal Meetings, 1979** Organisation for Economic Co-operation and Development. Radioactive Waste Management Committee. Coordinating Group on Geologic Disposal, United States. Department of Energy. Albuquerque Operations Office, 1979 Geological Disposal of Radioactive Waste in Deep Clay Formations X.L. Li, M. Van Geet, C. Bruggeman, M. De Craen, 2023-09-01 As part of research into the geological disposal of radioactive waste in Belgium the HADES underground research laboratory URL was constructed in a clay formation in the early 1980s This was the world's first purpose built URL in a deep clay formation Over the past four decades the HADES URL has played an important role in the research development and demonstration RD of geological disposal It enabled the in situ characterization of the clay host rock it allowed experiments to be performed under realistic geological conditions and it demonstrated the feasibility of constructing operating and closing underground repositories This volume presents several key contributions of the HADES URL to both Belgian and international research

into geological disposal It not only compiles some important RD D results but also illustrates the essential role URLs such as the HADES URL have played in developing concepts for the geological disposal of radioactive waste

Risk Methodology for Geologic Disposal of Radioactive Waste ,1980 *Geological Disposal of Radioactive Waste* ,1982 International Cooperation Program ,1986 Thematic Network on the Role of Monitoring in a Phased Approach ,2011 *Granite Disposal of U.S. High-level Radioactive Waste* ,2011 This report evaluates the feasibility of disposing U S high level radioactive waste in granite several hundred meters below the surface of the earth The U S has many granite formations with positive attributes for permanent disposal Similar crystalline formations have been extensively studied by international programs two of which in Sweden and Finland are the host rocks of submitted or imminent repository license applications This report is enabled by the advanced work of the international community to establish functional and operational requirements for disposal of a range of waste forms in granite media In this report we develop scoping performance analyses based on the applicable features events and processes FEPs identified by international investigators to support generic conclusions regarding post closure safety Unlike the safety analyses for disposal in salt shale clay or deep boreholes the safety analysis for a mined granite repository depends largely on waste package preservation In crystalline rock waste packages are preserved by the high mechanical stability of the excavations the diffusive barrier of the buffer and favorable chemical conditions The buffer is preserved by low groundwater fluxes favorable chemical conditions backfill and the rigid confines of the host rock An added advantage of a mined granite repository is that waste packages would be fairly easy to retrieve should retrievability be an important objective The results of the safety analyses performed in this study are consistent with the results of comprehensive safety assessments performed for sites in Sweden Finland and Canada They indicate that a granite repository would satisfy established safety criteria and suggest that a small number of FEPs would largely control the release and transport of radionuclides In the event the U S decides to pursue a potential repository in granite a detailed evaluation of these FEPs would be needed to inform site selection and safety assessment
