Irish Innovators In Science And Technology:

Irish Innovators in Science and Technology R. Charles Mollan, William J. Davis, Brendan Finucane, 2002 This book of pen portraits of men and women involved in Irish science and technology is a step in redressing the neglected state of the history of Irish science It should assist in bridging the gap between the earlier Irish scientific tradition and the present scientific activities of our universities and research institutes

Knowing Their Place? Brendan Walsh, Pam Hirsch, 2014-09-01 Knowing their Place is a comprehensive account of the public private and intellectual life of Irish women in the Victorian age In particular this book looks at the steady progress of girls and women within the education system their gradual involvement in intellectual life through amateur societies such as the Royal Dublin Society their emergence of independent highly motivated scholarly and philanthropic individuals who operated within local spheres with often very considerable degrees of success and influence

The Role of Women in the History of Geology Cynthia V. Burek, Bettie Higgs, Geological Society of London, 2007 This book is a first as it unravels the diverse roles women have played in the history and development of geology as a science predominantly in the UK Ireland and Australia and selectively in Germany Russia and US The volume covers the period from the late eighteenth century to the present day and shows how the roles that women have played changed with time These included illustrators museum collectors and curators educationalists researchers and geologists Originally as wives sisters or mothers many were assistants to their male relatives This book looks at all these forgotten women and for the first time historians and scientists together explore the contribution they made to this male dominated subject

Innovation, Profit and the Common Good in Higher Education J. Harpur, 2010-07-30 University ethics is everyone's business and big business is what the university is all about whether in the US Europe or the rest of the world How this has come about is less important than that it has and is being taken very seriously by global and national forces The important issue confronting higher education is its assumed role in guaranteeing economic prosperity Governments are no longer content to let research leak out serendipitously into the economy The Post Industrial Society Information Society Knowledge Economy and Smart Economy require nothing less than commercially directed research producing innovative products The public interest is reduced to economic measures The political social and moral implications of changing practices in the university are rarely acknowledged in the rise of the New Alchemy This book examines the resulting ambiguities and questionable evidence in favour of current policies

Joining Complexity Science and Social Simulation for Innovation Policy Petra Ahrweiler, Nigel Gilbert, Andreas Pyka, 2016-04-26 This book explores how complexity science and social simulation can be used to improve and inform policy making in both research and innovation Beginning with an introduction to conceptual definitions of complexity science and social simulation the book demonstrates the validity of the underlying integrated research framework used throughout It is then divided into two parts with the first investigating the effects and impacts of policy making on the structure composition and outputs of research and

innovation networks using the agent based SKIN platform Simulating Knowledge Dynamics in Innovation Networks <http://cress.soc.surrey.ac.uk/SKIN/> The second half of the book discusses a research initiative funded by the Irish government focusing on innovation policy simulation for economic recovery This consists of empirical research on Irish research and innovation networks and SKIN based simulations of technology transfer issues and the commercialization of research in areas with high potential for innovation and economic growth The book concludes with reflections on the maturity and utility of an approach combining complexity science and social simulation for research and innovation policy *Joining Complexity Science and Social Simulation for Innovation Policy* will be of particular interest to scientists concerned with innovation and complex systems including economists sociologists and complexity researchers as well as students and practitioners such as innovation policymakers and innovation business managers

Small Country Innovation Systems Charles Edquist, Leif Hommen, 2009-01-01 What are the challenges that small countries face concerning innovation and what are the effects of globalization on their innovation systems In this very interesting rich and timely book Edquist and Hommen compare ten different small national innovation systems from the Asia Pacific and Northern Europe that are rather advanced in their development The answers that the authors give are convincing and relate not only to the unique characteristics of each national system that shapes innovative activity but also to some commonalities that exist across these countries Franco Malerba Bocconi University Italy This major book presents case studies of ten small country national systems of innovation NSIs in Europe and Asia namely Denmark Finland Hong Kong Ireland the Netherlands Norway Singapore South Korea Sweden and Taiwan These cases have been carefully selected as examples of success within the context of globalization and as new economies where competition is increasingly based on innovation To facilitate comparative analysis the ten studies follow a common structure informed by an activities based approach to describing and analysing NSIs which addresses the critical issues of globalization and the consequences of innovation for economic performance The final chapter compares fast growth and slow growth countries concentrating on issues of innovation policy The results illustrate the usefulness of an activities based approach to studying NSIs point to distinctive national roles within an increasingly differentiated international division of labour and address the key themes of selectivity and coordination in innovation policy This valuable book presents one of the most significant comprehensive and comparative country studies of NSIs in the last decade It will have great import and should be widely read by every serious student and scholar of innovation studies **Ireland**

Globalizing Innovation Patrick J.W. Egan, 2018-01-12 The impact of host country institutions and policy on innovation by multinational firms in emerging economies In the past multinational firms have looked to developing countries as sources of raw materials markets or production efficiencies but rarely as locations for innovation Today however R but Egan finds

host country institutions and the configuration of the host country's investment policies have a strong impact on firm decisions and evolving country investment profiles Egan uses econometric analysis to identify determinants of multinational innovation and examines differences among state institutions as a key variable He then offers a detailed case study assessing Ireland's attempts to use foreign direct investment in innovation as a catalyst for development While FDI is a potential vehicle for industrial upgrading Egan cautions it is neither necessary nor sufficient for development Furthermore innovation intensive investments are not likely to develop linkages with local actors or otherwise embed themselves in host economies in the absence of active discriminating policies channeled through coherent and coordinated institutions

The Legacy of Ireland's Economic Expansion Peadar Kirby, Padraig Carmody, 2013-10-18 Ireland underwent a dramatic economic and social transformation from the 1990s onwards earning it the title the Celtic Tiger Rapid economic growth was accompanied by substantial in migration However in the later 2000s Ireland is also experiencing a severe economic recession This book examines the nature and geographies of the Celtic Tiger focusing on the evolution of industries such as information and communication technology and pharmaceuticals It also examines the changing nature of social ties in cities trends amongst knowledge workers and the experiences of return migrants It concludes with reflections on the nature of the Celtic Tiger phenomenon and how this will shape Ireland's geography and society into the future This book was published as a special issue of Irish Geography

Century of Endeavour Roy H. W. Johnston, 2003 This work is the study of a family's century long involvement with Irish self rule and political freedom Joe Johnston 1890-1972 from a Tyrone Presbyterian small farm background had 3 elder brothers who made their careers in the Indian Civil Service The family were Home Rule within the Empire supporters in the Ulster liberal tradition After studying classics and ancient history in Trinity College Dublin TCD and then in Oxford JJ became a Fellow of Trinity in 1913 He then published his anti Carson book Civil War in Ulster attacking the process which culminated in the 1914 Larne gun running He contributed significantly to the emergent national movement He wrote critically about 1930s economic policies and went on to serve in the Irish Senate Seanad from 1939 to 1954 His son RJ b 1929 was a pioneer of the student left in TCD in the 1940s and was associated with the post war attempt to bring European Marxist thinking into the Irish labour movement with the foundation of the Irish Workers League in 1948 After a period in London in the early 1960s he returned to Dublin this time as a research scientist and helped Cathal Goulding in his attempt to get the 1960s generation of republicans to go political in a democratic left wing mode decoupling from the Stalinist incubus He helped set the stage for the emergence of the Civil Rights approach to reform in Northern politics as a means of opening up an all Ireland perspective His opponents in the Republican movement the Provisionals opted for violence In the ensuing decades he participated in various politicising processes which may in the end show the counter productive nature of the role of the gun in politics in Ireland and elsewhere Roy Johnston lives in Dublin and continues to be politically active An important addition to any library of 20th century Irish Studies Professor J Skelly

The Politics of

High Tech Growth Sean O'Riain, 2004-04-26 This book argues that beneath the Irish trade and foreign investment boom lies a more interesting story of regional innovation promoted by an alliance between the state and local technical communities. This alliance was governed through a decentralized set of state institutions drawing on global and local economic and political resources. This Developmental Network State has had a significant impact on the growth of Ireland's high tech cluster and is central to the emergence of an international network of global high tech regions from Silicon Valley to Ireland, Taiwan and Israel. The book provides a detailed study of the rise of the software industry in Ireland and of the state institutions and political conditions which promoted it. It shows how new network state policies and institutions have been central to high tech regions elsewhere. Creating Regional Wealth in the Innovation Economy Jeff Saperstein, Daniel Rouach, 2002 Pinpoints the reasons why some locations succeed in the quest to become centres of technology and innovation cover.

Responsible Research and Innovation Robert Gianni, John Pearson, Bernard Reber, 2018-07-27 Responsible Research and Innovation provides a comprehensive and impartial overview of the European Commission's Responsible Research and Innovation (RRI) framework including discussion of both the meaning and aims of the concept and of its practical application. As a governance framework for research and innovation RRI involves four key perspectives: ethical, economic, business, legal and governance and political. The book is organised into chapters covering these different dimensions. The authors provide different viewpoints on these aspects in order to offer guidance from experts in the field while at the same time acknowledging the interpretative openness of the RRI frameworks.

Field Day Review Seamus Deane, Breandán Mac Suibhne, 2008-03 Talking about contemporary Ireland this work also looks at literary criticism, fiction, history, politics and art.

Innovation and Institutional Embeddedness of Multinational Companies Martin Heidenreich, 2012 This wonderful volume brings together contributions mainly from the innovation literature whose findings are in a sense quite familiar but which in this collection are juxtaposed in such a way as to highlight their common institutional underpinnings. This is very much due to the efforts of the editor whose insightful introduction and editorial vision brings out several interesting and emerging themes from this collection of papers. I think this volume breaks new ground in highlighting the embeddedness of MNE subsidiaries in multiple contexts and it will be of considerable interest to scholars engaged with institutional analysis. However, I also believe that researchers interested in regional embeddedness, the geography of innovation and knowledge management will find new angles to their work in this collected volume.

Sarianna M Lundan, University of Bremen, Germany. Multinational companies are crucial actors in a global knowledge based economy combining the advantages of global and locally coordinated production and innovation strategies with specific regional and national factors. This book questions how MNCs can best exploit institutionally embedded knowledge, explores the utilization of external institutionally embedded knowledge in corporate innovation processes and addresses the challenges of embeddedness. The expert contributors draw on managerial, economic, geographic and sociological perspectives to explore

the essential roles of regional and national knowledge infrastructures and the cultural and political environment of MNCs. They build upon and extend the discussion on the regional and national embeddedness of MNCs with new country case studies and comparative analyses focussing on the relationship between innovation in companies and regional studies. Significantly the book also establishes a link between two important debates that have hitherto been largely disconnected. Regional studies and international business studies separately address issues that fall within the scope of the book but do not provide an integrated analysis of the embeddedness of MNCs. This pathbreaking book goes some way to fill this gap in the literature and as such will prove invaluable to academics, R D managers, regional policy makers and students with an interest in international business, business economics, regional studies and organization studies. Governance of Innovation Systems: Volume 2 Case Studies in Innovation Policy OECD, 2005-11-15. This book presents case studies of governance of innovation policy in selected OECD countries. It focuses on providing an analysis of governance challenges, institutional changes and policy learning practices. Innovation, Human Capital and Trade Competitiveness Marzena Anna Weresa, 2013-11-18. This work focuses on researching and establishing the importance of human capital and innovation as determinants of competitive advantages in international trade in the context of rapidly evolving technological advancement, globalization and economic integration. The processes that accompany the shift from industrial economics to a knowledge based economy are currently the object of interest of both scientists, politicians, investors and entrepreneurs. In many countries the traditional sources of socioeconomic development such as low labor costs, availability of inexpensive raw materials and favorable geographic location are waning. These economies are searching for new sources of competitive advantage that will allow for maintaining growth among other things by boosting participation in international trade. The book explores non traditional drivers of competitiveness in both theory and practice. First chapters 1 through 4 present theoretical and methodological aspects of the relationships among international trade, human capital and innovation. Here the authors address the controversy associated with the concept of competitiveness itself and its measurement while paying special attention to the political development of comparative advantages related to international trade. The second part of the monograph, chapters 5 through 8, is of empirical nature. This section contains case studies of selected countries that represent models of various national innovation systems. Finally, the theoretical and practical aspects are integrated, allowing policymakers and financial and business leaders to consider how their decisions can influence their countries' competitive positions through their investments in innovation and human capital. *Complexity and Knowledge Management* Kurt A. Richardson, Andrew Tait, 2010-02-01. It seems as if attempts to use knowledge to understand and manage social networks are everywhere. Millions if not billions of dollars are being spent in an attempt to derail terrorist networks, with much of it being invested in making sense of massive data streams. There is growing concern that much of this money is being squandered on approaches that will never deliver on their promises. Our armed forces are being prepared to combat terrorist threats by the

introduction of network centric approaches and digital battlefields basically attempts to provide warfighters with a complete picture of the battlespace. However, the experience of practitioners suggests that the data smog this creates is actually counterproductive. From the arena of politics, the recent invigorating battle between senators Clinton and Obama has thrown the spotlight on the deficiencies in political polling. Economist 2008b. Changes in the structure of the situation, e.g. high turnouts have thrown the whole industry into chaos. Complexity is being discounted and the results are stark. The conclusion formed in the media was that the situation was wildly unpredictable so anyone's to win and ended up having real consequences for the Democratic challenger in November 2008. Baldwin 2008. Turning to business, we find that Societale recently lost 7.2bn as the result of a single rogue trader making a series of bogus transactions amid turbulent markets in 2007 and 2008. There has been much speculation on what was known when it was known and who knew it. In other words, we have speculation that this is an example of the role of knowledge in the mismanagement of social networks with spectacular effect. At a glance, the problems highlighted above seem positively overwhelming. Where do you start? But start we must. Simple cause and effect thinking doesn't seem to be able to cut the mustard. There is broad agreement that even if the Kyoto targets were fully met on schedule by 2100, it would only delay the warming of the planet by six years. Parry et al. 1998. We need to utilize knowledge in new ways or maybe uncover insights from old ways. It is hard to think of something more worthy of attention than the role of knowledge in the management of complex systems. In Volume 4 of the Managing the Complex Series, we have brought together seventeen essays from authors around the globe to explore the complex systems view of knowledge and its role in social networks. Contributors explore such topics as the limitations to our knowledge of complex systems, the transfer of knowledge from local to global levels, collaborative knowledge generation, decision making in complex multi-stakeholder situations, organizational learning and innovation, all through the lens of the emerging field of complexity science. The editors hope that this volume will give theorists further avenues to explore in their attempts to understand knowledge creation, maintenance and distribution and also provide practitioners with new tools to apply in the complex and messy real world.

Curriculum in Context Jim Gleeson, 2010. This critical analysis locates Irish curriculum policy and practice in their broader socio-cultural and policy contexts. Such an analysis is particularly necessary at a time when Irish schools are experiencing unprecedented waves of curriculum reform in a context where substantive curriculum debates rarely occur. The book explores the implications of these contextual factors for official understandings of and attitudes towards curriculum, with particular reference to the experiences of the curriculum development agencies, recent curriculum reforms and the nature of Irish curriculum contestation and discourse. Education and curriculum policy making are considered from the perspectives of economic growth, social inclusion, policy fragmentation and the prevailing representational model of partnership. The study identifies the tensions that inevitably arise in attempting to achieve both quality and equality in education and offers some alternatives to the prevailing contractual model of accountability. The

author draws on his own long experience of curriculum development and evaluation and on interviews with key players in Irish curriculum decision making Governance of Innovation Systems: Volume 3 Case Studies in Cross-Sectoral Policy
OECD,2005-11-28 This OECD book provides lessons from case studies in policy governance for the information society and sustainable development It highlights important lessons from these policy areas and illustrates mechanisms and practices for better co ordination and integration across policy areas
