

# HOW TO ENSURE YOU ARE Drinking Safe Water

## Use an at-home water analysis kit

- ◆ At-home kits typically include a number of strips that change color if any of a variety of contaminants are present.

## If you use well water, test it regularly

- ◆ The rules that govern municipal water supplies do not apply to private sources. Monitor water quality on your own.

## Invest in water filtration systems

- ◆ High-quality filtration systems notify you which contaminants they filter out—and have the data to back up their effectiveness.

## Replace filters as required

- ◆ Water filtration systems are only effective when they're properly maintained.
- ◆ For this reason, it's critical to follow the care instructions for your filter—especially as it relates to filter replacement.

## Contact your local government for water quality info

- ◆ Get in touch with your local or state health and human services department to learn more about your water quality.
