Light In Architecture:

Illuminating Michelle Corrodi, Klaus Spechtenhauser, 2014-03-12 The image of open working and living spaces flooded with light has more than any other become fixed in our minds as a symbol of modernity and the spirit of the times While the workplace has always been the focus of ergonomic studies and optimization with respect to a good provision of daylight large glass surfaces have now become the order of the day for living spaces as well But does this automatically make for better illumination Taking this question as its starting point the publication *Illuminating* thematizes central aspects of light planning including the connection between the provision of daylight and architectural design building orientation the nature of the facade the ground plan comfort and the proportions and atmosphere of rooms In the process general characteristics and fundamental principles as well as subtle facets of an intelligent treatment of daylight are discussed and critically examined within an expanded architecture and culture historical context

Made of Light Mark Major, 2005-01-01 *Made of Light* the Art of Light and Architecture explores our illuminated world in a way that is both affecting and thought provoking Rather than addressing quantitative criteria this book deliberately focuses on qualitative ephemeral and abstract considerations and shows them to be an essential part of the relationship between light and built form *Made of Light* is not

intended to prescribe an approach rather it attempts to recognise that while we have our own individual subjective perception of light there is also a dialogue to be had through which this most exciting but elusive medium might be explored Jonathan Speirs and Mark Major was well established authorities on light Taking their cues from the natural world their approach at the forefront of lighting design is both invigorating and inspirational Edited by Anthony Tischhauser this book includes an interview with both architects as well as vivid illustrations of their personal approach to an architecture that is Made of Light BOOK JACKET

Electric Light Sandy Isenstadt, 2018-09-25 How electric light created new spaces that transformed the built environment and the perception of modern architecture In this book Sandy Isenstadt examines electric light as a form of architecture as a new uniquely modern kind of building material Electric light was more than just a novel way of brightening a room or illuminating a streetscape it brought with it new ways of perceiving and experiencing space itself If modernity can be characterized by rapid incessant change and modernism as the creative response to such change Isenstadt argues then electricity instantaneous malleable ubiquitous evanescent is modernity's medium Isenstadt shows how the introduction of electric lighting at the end of the nineteenth century created new

architectural spaces that altered and sometimes eclipsed previously existing spaces He constructs an architectural history of these new spaces through five examples ranging from the tangible miracle of the light switch to the immaterial and borderless gloom of the wartime blackout He describes what it means when an ordinary person can play God by flipping a switch when the roving cone of automobile headlights places driver and passenger at the vertex of a luminous cavity when lighting in factories is seen to enhance productivity when Times Square became an emblem of illuminated commercial speech and when the absence of electric light in a blackout produced a new type of space In this book the first sustained examination of the spatial effects of electric lighting Isenstadt reconceives modernism in architecture to account for the new perceptual conditions and visual habits that followed widespread electrification
