Fatal Climate:

A Cultural History of Climate Change Tom Bristow, Thomas H. Ford, 2016-04-20 Charting innovative directions in the environmental humanities this book examines the cultural history of climate change under three broad headings history writing and politics Climate change compels us to rethink many of our traditional means of historical understanding and demands new ways of relating human knowledge action and representations to the dimensions of geological and evolutionary time To address these challenges this book positions our present moment of climatic knowledge within much longer histories of climatic experience Only in light of these histories it argues can we properly understand what climate means today across an array of discursive domains from politics literature and law to neighbourly conversation Its chapters identify turning points and experiments in the construction of climates and of atmospheres of sensation They examine how contemporary ecological thought has repoliticised the representation of nature and detail vital aspects of the history and prehistory of our climatic modernity This ground breaking text will be of great interest to researchers and postgraduate students in environmental history environmental governance history of ideas and science literature and eco criticism political theory cultural theory as well as all general readers interested in climate change

Promoting Climate Change Awareness through Environmental Education Wilson, Lynn, Stevenson, Carolyn, 2015-09-22 Addressing global climate change is a monumental battle that can only be fought by the leaders of tomorrow but future leaders are molded through education and shaped by the leaders of today While the pivotal role of education in spreading awareness of climate change is one universally espoused equally universal is the recognition that current education efforts are falling woefully short Promoting Climate Change Awareness through Environmental Education stems the rising tide of shortcomings in environmental education by plugging a known gap in current research and opening a dialogue for the future Targeting an audience of young scholars academics researchers and policymakers this volume provides a much needed dam of empirical evidence regarding the role of youth education in addressing one of the greatest challenges of our age This timely publication focuses on topics such as building resilience to climate change green learning spaces gender issues and concerns for developing countries and the impact of young adults on the future of environmental sustainability

Climate Resilience for an Aging Nation Danielle Arigoni, 2023-10-23 Climate change is having an immediate and sometimes life threatening impact especially for older adults generally speaking people 65 or older Older adults often face mobility cognitive and resource challenges which contribute to a disproportionate number of deaths in the face of major disasters But some challenges are less visible Consider the grandparent who no longer can stand and wait at the bus stop because of the heat or the retiree who lives in a home with black mold due to chronic flooding that she can t afford to remediate or leave because of her limited fixed income Our population is aging by 2034 the US will have more people over 65 than under 18 Despite the evidence that climate change is severely impacting older adults and the reality that communities will be confronted with more frequent and more severe

disasters we're not prepared to address the needs of older adults and other vulnerable populations in the face of a changing climate. In *Climate Resilience for an Aging Nation*, community resilience and housing expert Danielle Arigoni argues that we cannot achieve true resilience until communities adopt interventions that work to meet the needs of their oldest residents. She explains that when we plan for those most impacted by climate and for those with the greatest obstacles to opportunity and well-being, we improve conditions for all. Arigoni explores how to integrate age-friendly resilience into community planning and disaster preparedness efforts through new planning approaches including an age-friendly process and a planning framework dedicated to inclusive disaster recovery to create communities that serve the needs of older adults better not only during disasters but for all the days in between. Examples are woven throughout the book including case studies of age-friendly resilience in action from New York State, Portland, Oregon, and Multnomah County, and New Orleans. *Climate Resilience for an Aging Nation* will help professionals and concerned citizens understand how to best plan for both the aging of our population and the climate changes underway so that we can create safer, more livable communities for all.

Climate and the Picturesque in the American Tropics Michael Boyden, 2022. This book explains how we came to think of the climate as something abstract and remote rather than a force that actively shapes our existence. It shows how the writings of American travellers in the Caribbean registered and pushed forward a new understanding of the

The Dispute of the New World Antonello

Gerbi, 2010-06-20 Translated by Jeremy Moyle When Hegel described the Americas as an inferior continent he was repeating a contention that inspired one of the most passionate debates of modern times Originally formulated by the eminent natural

scientist Georges Louis Leclerc Comte de Buffon and expanded by the Prussian encyclopedist Cornelius de Pauw this provocative thesis drew heated responses from politicians philosophers publicists and patriots on both sides of the Atlantic The ensuing polemic reached its apex in the latter decades of the eighteenth century and is far from extinct today Translated into English in 1973 *The Dispute of the New World* is the definitive study of this debate Antonello Gerbi scrutinizes each contribution to the debate unravels the complex arguments and reveals their inner motivations As the story of the polemic unfolds moving through many disciplines that include biology economics anthropology theology geophysics and poetry it becomes clear that the subject at issue is nothing less than the totality of the Old World versus the New and how each viewed the other at a vital turning point in history

Modern Great Americans Frederick Houk Law,1926 *Reducing Poverty, Protecting Livelihoods, and Building Assets in a Changing Climate* Dorte Verner,2010-06-25 Climate change is the defining development challenge of our time More than a global environmental issue climate change and variability threaten to reverse recent progress in poverty reduction and economic growth Both now and over the long run climate change and variability threatens human and social development by restricting the fulfillment of human potential and by disempowering people and communities in reducing their livelihoods options Communities across Latin America and the Caribbean are already experiencing adverse consequences from climate change and variability Precipitation has increased in the southeastern part of South America and now often comes in the form of sudden deluges leading to flooding and soil erosion that endanger people s lives and livelihoods Southwestern parts of South America and western Central America are seeing a decrease in precipitation and an increase in droughts Increasing heat and drought in Northeast Brazil threaten the livelihoods of already marginal smallholders and may turn parts of the eastern Amazon rainforest into savannah The Andean inter tropical glaciers are shrinking and expected to disappear altogether within the next 20 40 years with significant consequences for water availability These environmental changes will impact local livelihoods in unprecedented ways Poverty inequality water access health and migration are and will be measurably affected by climate change Using an innovative research methodology this study finds quantitative evidence of large variations in impacts across regions Many already poor regions are becoming poorer traditional livelihoods are being challenged in unprecedented ways water scarcity is increasing particularly in poor arid areas human health is deteriorating and climate induced migration is already taking place and may increase Successfully reducing social vulnerability to climate change and variability requires action and commitment at multiple levels This volume offers key operational recommendations at the government community and household levels with particular emphasis placed on enhancing good governance and technical capacity in the public sector building social capital in local communities and protecting the asset base of poor households
