Fatigue, Environment and Temperature Effects John J. Burke, 1983 **NASA Technical Memorandum**, 1994 **Effects of the Environment on the Initiation of Crack Growth** William Alan Van der Sluys, Robert S. Piascik, Robert Zawierucha, 1997 **Engine Structures**, 1988 SSC. United States. Ship Structure Committee, 1984 **Energy Research Abstracts**, 1986 Comprehensive Structural Integrity Ian Milne, R. O. Ritchie, B.L. Karihaloo, 2003-07-25 The aim of this major reference work is to provide a first point of entry to the literature for the researchers in any field relating to structural integrity in the form of a definitive research reference tool which links the various sub disciplines that comprise the whole of structural integrity Special emphasis will be given to the interaction between mechanics and materials and structural integrity applications Because of the interdisciplinary and applied nature of the work it will be of interest to mechanical engineers and materials scientists from both academic and industrial backgrounds including bioengineering interface engineering and nanotechnology The scope of this work encompasses but is not restricted to fracture mechanics fatigue creep materials dynamics environmental degradation numerical methods failure mechanisms and damage mechanics interfacial fracture and nanotechnology structural analysis surface behaviour and heart valves The structures under consideration include pressure vessels and piping off shore structures gas installations and pipelines chemical plants aircraft railways bridges plates and shells electronic circuits interfaces nanotechnology artificial organs biomaterial prostheses cast structures mining and more Case studies will form an integral part of the work *Fracture Mechanics* Robert P. Wei, 2010-02-08 Fracture and slow crack growth reflect the response of a material i.e its microstructure to the conjoint actions of mechanical and chemical driving forces and are affected by temperature There is therefore a need for quantitative understanding and modeling of the

influences of chemical and thermal environments and of microstructure in terms of the key internal and external variables and for their incorporation into design and probabilistic implications This text which the author has used in a fracture mechanics course for advanced undergraduate and graduate students is based on the work of the author's Lehigh University team whose integrative research combined fracture mechanics surface and electrochemistry materials science and probability and statistics to address a range of fracture safety and durability issues on aluminum ferrous nickel and titanium alloys and ceramics Examples are included to highlight the approach and applicability of the findings in practical durability and reliability problems

comprehensive and authoritative overview of the latest research into managing hydrogen embrittlement in energy technologies Volume 1 is divided into three parts the first of which provides an overview of the hydrogen embrittlement problem in specific technologies including petrochemical refining automotive hydrogen tanks nuclear waste disposal and power systems and H₂ storage and distribution facilities Part two then examines modern methods of characterization and analysis of hydrogen damage and part three focuses on the hydrogen degradation of various alloy classes With its distinguished editors and international team of expert contributors Volume 1 of Gaseous hydrogen embrittlement of materials in energy technologies is an invaluable reference tool for engineers designers materials scientists and solid mechanics working with safety critical components fabricated from high performance materials required to operate in severe environments based on hydrogen Impacted technologies include aerospace petrochemical refining gas transmission power generation and transportation Summarises the wealth of recent research on understanding and dealing with the safety durability performance and economic operation of using gaseous hydrogen at high pressure Reviews how hydrogen embrittlement affects particular sectors such as the petrochemicals automotive and nuclear industries Discusses how hydrogen embrittlement can be characterised and its effects on particular alloy classes Comprehensive Hard Materials Daniele Mari, Luis Miguel, Christoph E. Nebel, 2014-02-01 Comprehensive Hard Materials Three Volume Set deals with the production uses and properties of the carbides nitrides and borides of these metals and those of titanium as well as tools of ceramics the superhard boron nitrides and diamond and related compounds Articles include the technologies of powder production including their precursor materials milling granulation cold and hot compaction sintering hot isostatic pressing hot pressing injection moulding as well as on the coating technologies for refractory metals hard metals and hard materials The characterization testing quality assurance and applications are also covered Comprehensive Hard Materials provides meaningful insights on materials at the leading edge of technology It aids continued research and development of these materials and as such it is a critical information resource to academics and industry professionals facing the technological challenges of the future Hard materials operate at the leading edge of technology and continued research and development of such materials is critical to meet the technological challenges of the future Users of this work can improve their knowledge of basic principles and gain a better understanding of process structure property relationships With the convergence of nanotechnology coating techniques and functionally graded materials to the cognitive science of cemented carbides cermets advanced ceramics super hard materials and composites it is evident that the full potential of this class of materials is far from exhausted This work unites these important areas of research and will provide useful insights to users through its extensive cross referencing and thematic presentation To link academic to industrial usage of hard materials and vice versa this work deals with the production uses and properties of the carbides nitrides and borides of these metals and those of titanium as well as tools of ceramics the superhard boron nitrides and diamond and related compounds
