Optical and Wireless Communications Matthew N.O. Sadiku,2018-10-08 Optical and wireless technologies are being introduced into the global communications infrastructure at an astonishing pace Both are revolutionizing the industry and will undoubtedly dominate its future yet in the crowded curricula in most electrical engineering programs there is no room in typical data communications courses for proper coverage of these next generation technologies Optical and Wireless Communications Next Generation Networks covers both types of networks in a unique presentation designed for a one semester course for senior undergraduate or graduate engineering students Part I Optical Networks covers optical fibers transmitters receivers multiplexers amplifiers and specific networks including FDDI SONET fiber channel and wavelength routed networks Part II Wireless Networks examines fundamental concepts and specific wireless networks such as LAN ATM wireless local loop and wireless PBXs This section also explores cellular technologies and satellite communications Eventually next generation networks will be as ubiquitous as traditional telephone networks and today s engineering students must be prepared to meet the challenges of optical and wireless systems development and deployment Filled with illustrations examples and end of chapter problems Optical and Wireless Communications Next Generation Networks provides a brief but comprehensive introduction to these technologies that will help future engineers build the foundation they need for success

High Speed Networking, III Otto Spaniol,A. Danthine,1991 From a user point of view it is obvious that experience in the 100Mbit/sec range is still very limited and that early efforts of deployment have been sometimes rather painful But the trend is clear and the stabilization of the standards makes researchers confident in a forthcoming evolution which will follow the pace of the Ethernet deployment ten years ago Yet even if the 100Mbit/sec range is not yet stabilized there is much continuing effort in the Gigabit and Terabit ranges where many research claims have been considered as remote dreams Included in this conference proceedings are papers dealing with the 100Mbit/sec range where the standards and the products are coming and where the integration begins and state of the art research in the very high speed range from 1 Gigabit/sec up
