Limits For Intakes Of Radionuclides By Workers Index:

ICRP Publication 30 ICRP,1980-12-01 This part gives metabolic data for 30 further elements including Annual Limits on Intakes ALI s for their isotopes The data given in this report are intended to be used together with the text and dosimetric models described in ICRP Publication 30 Part 1 ICRP Publication 30 ICRP,1982-08-31 A subject index and a comprehensive index of radionuclides considered in all parts and supplements of ICRP Publication 30 *Limits for Intakes of Radionuclides by Workers* International Commission on Radiological Protection. Committee 2,1982 **ICRP Publication 30** ICRP,1982-08-31 A subject index and a comprehensive index of radionuclides considered in all parts and supplements of ICRP Publication 30 *Radiation Protection* William H. Hallenbeck,2020-11-26 This text reference provides an excellent introduction to fundamental topics in radiation protection including energetics kinetics interaction external radiation protection dosimetry standards and measurement Chapters on radioactive waste and radon topics not normally covered in introductory texts have been incorporated as well An extensive glossary of terms abbreviations acronyms physical constants units and unit conversions provides a ready source of frequently needed information Several appendices contain specifications and vendors for commercially available portable radiation survey instruments personal dosimeters and radon radon progeny monitors Cumulated Index Medicus ,1981 Environmental Radioactivity and Emergency Preparedness Mats Isaksson,Christopher L. Raaf,2017-01-06 Radioactive sources such as nuclear power installations can pose a great threat to both humans and our environment How do we measure model and regulate such threats Environmental Radioactivity and Emergency Preparedness addresses these topical questions and aims to plug the gap in the lack of comprehensive literature in this field The book explores how to deal with the threats posed by different radiological sources including those that are lost or hidden and the issues posed by the use of such sources It presents measurement methods and approaches to model and quantify the extent of threat and also presents strategies for emergency preparedness such as strategies for first responders and radiological triage in case an accident should happen Containing the latest recommendations and procedures from bodies such as the IAEA this book is an essential reference for both students and academicians studying radiation safety as well as for radiation protection experts in public bodies or in the industry The Publishers' Trade List Annual ,1985 **Radiation Exposure and Occupational Risks** Eberhard Scherer,Christian Streffer,Klaus-Rüdiger Trott,2012-12-06 The aim of radiation protection standards is to make the radiation workplace as safe as is humanly possible The gradual evolution over the last 20 years has been towards a more precise definition of the limits for occupational exposure These have been created not only in terms of short term effects but also more importantly in terms of long term risks involving such problems as the potential for carcinogenesis and genetic change In the United States the National Committee for Radiation Protection has recommended that 5 rems 50 mSv should remain as the maximum permissible dose equivalent for total body exposure This would represent the sum of internal and external exposure and

should be regarded as the upper limit allowed The community of radiation users is required to conduct its operations in such a manner that the absolute value of the individual's dose equivalent in rems does not exceed his age in years There should be additional limits for tissues and organs based on short term effects Therefore individual organs are limited to dose equivalents low enough to ensure that the dose threshold values are not exceeded Current Catalog National Library of

practical guide for medical physicists and others involved with radiation protection in the healthcare environment

Radioactivity Measurements W. B. Mann, A. Rytz, A. Spornol, 2012-12-02 The authors have addressed the basic need for internationally consistent standards and methods demanded by the new and increasing use of radioactive materials radiopharmaceuticals and labelled compounds Particular emphasis is given to the basic and practical problems that may be encountered in measuring radioactivity The text provides information and recommendations in the areas of radiation protection focusing on quality control and the precautions necessary for the preparation and handling of radioactive substances New information is also presented on the applications of both traditional and innovative instruments in the fields of diagnostic and clinical radiology radiation protection biomedical research industrial and agricultural applications power production and waste control

Health Physics and Radiological Health Thomas E. Johnson, Brian K. Birky, 2012-10-09 This text is an invaluable comprehensive data reference for anyone involved in health physics or radiation safety This new edition addresses the specific data requirements of health physicists with data presented in large tables including the latest NCRP recommendations which are tabulated and given in both SI and traditional units for ease of use Although portions of these data can be obtained from various internet sites many are obscure difficult to navigate and or have conflicting information for even the most common data such as specific gamma ray constants This new edition compiles all essential data in this vast field into one user friendly authoritative source It also offers a website with full text search capability Markets include radiation safety medical physics and nuclear medicine
