*Integer Programming and Related Areas* C. Kastning, 2013-11-11 Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl Math Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries

*Nonlinear Programming* Anthony V. Fiacco, Garth P. McCormick, 1990-01-01 Recent interest in interior point methods generated by Karmarkar's Projective Scaling Algorithm has created a new demand for this book because the methods that have followed from Karmarkar's bear a close resemblance to those described There is no other source for the theoretical background of the logarithmic barrier function and other classical penalty functions Analyzes in detail the central or dual trajectory used by modern path following and primal dual methods for convex and general linear programming As researchers begin to extend these methods to convex and general nonlinear programming problems this book will become indispensable to them

*Mathematics of Military Action, Operations and Systems* United States. Department of the Army, 1968

*Mathematical Methods and Theory in Games, Programming, and Economics* Samuel Karlin, 2014-05-12 Matrix Games Programming and Mathematical Economics deals with game theory programming theory and techniques of mathematical economics in a single systematic theory The principles of game theory and programming are applied to simplified problems related to economic models business decisions and military tactics The book

explains the theory of matrix games and some of the tools used in the analysis of matrix games The text describes optimal strategies for matrix games which have two basic properties as well as the construction of optimal strategies The book investigates the structure of sets of solutions of discrete matrix games with emphasis on the class of games whose solutions are unique The examples show the use of dominance concepts symmetries and probabilistic arguments that emphasize the principles of game theory One example involves two opposing political parties in an election campaign particularly how they should distribute their advertising efforts for wider exposure The text also investigates how to determine an optimal program from several choices that results with the maximum or minimum objective The book also explores the analogs of the duality theorem the equivalence of game problems to linear programming problems and also the inter industry nonlinear activity analysis model requiring special mathematical methods The text will prove helpful for students in advanced mathematics and calculus It can be appreciated by mathematicians engineers economists military strategists or statisticians who formulate decisions using mathematical analysis and linear programming Engineering Design Handbook United States. Army Materiel Command,1971 The purpose of this handbook is to provide a text and reference material in System Analysis and Cost Effectiveness It is intended for those technical scientific management and administrative personnel who are responsible for preparing information making decisions or reviewing decisions made by others regarding life cycle cost system effectiveness availability dependability capability or technical feasibility of a system or equipment at any phase in its life cycle The handbook consists of four chapters 1 an introduction to the concept of system analysis and cost effectiveness 2 a basic framework or general methodological approach for conducting and reviewing cost effectiveness or system analysis studies 3 a set of techniques linear programming queueing theory simulation etc that can be used for performing cost effectiveness and system analysis studies and 4 a review of the basic mathematical and statistical concepts that underlie the scientific approach in the system analysis cost effectiveness process *Mathematical Programming* Steven Vajda,2009-01-01 This classic by a well known expert explores both theory and applications It focuses on linear programming in addition to other programming topics and features numerous worked out examples and problems 1961 edition **Lineat Programming : A management tool** , Fuzzy Mathematical Programming Young-Jou Lai,Ching-Lai Hwang,2012-12-06 In the last 25 years the fuzzy set theory has been applied in many disciplines such as operations research management science control theory artificial intelligence expert system etc In this volume methods and applications of fuzzy mathematical programming and possibilistic mathematical programming are first systematically and thoroughly reviewed and classified This state of the art survey provides readers with a capsule look into the existing methods and their characteristics and applicability to analysis of fuzzy and possibilistic programming problems To realize practical fuzzy modelling we present solutions for real world problems including production manufacturing transportation assignment game environmental management resource allocation project investment banking finance and agricultural economics To improve flexibility and

robustness of fuzzy mathematical programming techniques we also present our expert decision making support system IFLP which considers and solves all possibilities of a specific domain of fuzzy linear programming problems Basic fuzzy set theories membership functions fuzzy decisions operators and fuzzy arithmetic are introduced with simple numerical examples in an easy to read and easy to follow manner An updated bibliographical listing of 60 books monographs or conference proceedings and about 300 selected papers reports or theses is presented in the end of this study
