Feeding And Swallowing Disorders In Dementia:

Feeding and Swallowing Disorders in Dementia Jacqueline Kindell, 2017-07-05 This informative manual draws on expert research to highlight the feeding and swallowing difficulties that can occur with dementia. It is also a practical guide that offers potential strategies to manage these problems. Professionals are encouraged to focus on the needs of the individual by providing practical questions that should be asked when making an assessment. This is achieved through a step by step process which allows a worker to observe, document and manage feeding and swallowing difficulties. Forms, schedules and checklists that can be photocopied are provided to aid in implementation. This is a detailed practical resource which offers support and direction for speech and language therapists and others with an interest in swallowing problems working with people with dementia. It includes case studies to illustrate theory in practice as well as a wide ranging bibliography.

Swallowing Guidelines Elizabeth Boaden, Joanne Walker, Jo Walker, 2017-07-05 This book and downloadable resources are the simple answer to a busy therapist's problem. It enables the therapist to meet their professional responsibility to inform patients and carers of relevant dysphagia instructions by designing contemporaneous written information, advice and therapy. Using downloadable resources, Swallowing Guidelines allow you to produce multiple individualised programmes that may be emailed or posted to the individuals, their carers or other professionals in any location. The programme sheets offer comprehensive advice covering all aspects of dysphagia care in clear unambiguous language. All that the therapist needs to do is highlight the sections pertinent to their patient and the programme is created. As the individual's status changes, the programme can be quickly amended to reflect their changing needs. The downloadable resources and accompanying template ensures that individualised programmes are comprehensive and produced efficiently, thus maximising the use of clinical and administrative time. Elizabeth Boaden, Principal Speech Language Therapist of Adult Service, teaches dysphagia at an undergraduate and post graduate level to speech language therapists and nurses. She is currently studying for a PhD at the University of Central Lancashire on the efficacy of training pre-registration nurses to perform swallow screening. Jo Walker, Specialist Speech Language Therapist, works in acquired neurology at Chorley South Ribble PCT. She also provides a Speech Language service for the Community Acquired Brain Injury Rehab Team and is currently seconded to the Cumbria and Lancashire Workforce Development Confederation working on an educational project in acquired brain injury.

Stähelin, 2012-12-06 H B Stahelin Under or malnutrition is a frequent and serious problem in geriatric patients 8 Today there is no doubt that malnutrition contributes significantly to morbidity and mortality in the aged The immune function is impaired the risk for falls and fractures increases in acute illness recovery is delayed and complications are frequent Acute and chronic illnesses lead to a catabolic metabolism and hence increase the signs and symptoms of malnutrition Cytokines related to inflammation block the synthesis of albumin and shift protein synthesis to acute phase proteins The activation of the ubiquitin proteasome pathway leads to a degradation of muscle protein which leads to an additional loss of muscle mass which occurs as age dependent sarcopenia and adds to the already existing frailty 2 4 It is often difficult to decide to what extent the metabolic alterations result from malnutrition or concomitant illness Psychological factors contribute as a vicious circle significantly to anorexia and thus aggravate the condition They are the most important causes of failure to thrive in old age 7 It is evident that next to the therapy of the underlying illness an adequate support with calorie and nutrient intake over weeks becomes essential under these conditions Clear cut improvements are often only seen after 6 or more weeks Besides a clinical clearly visible malnutrition selective nutrient deficits are much more frequent Numerous and highly different mechanisms may lead to a marginal or insufficient supply with micronutrients *Pediatric Dysphagia* Julina Ongkasuwan, Eric H. Chiou, 2018-10-03 Pediatric dysphagia is a clinical problem that crosses disciplines Children may be seen by numerous medical specialties including pediatric otolaryngology gastroenterology pulmonology speech pathology occupational therapy and lactation consultants The myriad approaches to the diagnosis and management of dysphagia is confusing for both clinicians and families resulting in recurrent trips to medical professionals Feeding is integral to socialization and to bonding between infants and parents Disruptions in feeding development can be extremely taxing emotionally and economically for families Children with dysphagia are some of the most challenging patients even for clinicians who specialize in their care This text provides the reader with a comprehensive understanding of swallowing and presents a practical evidence based approach to the diagnosis and management of swallowing difficulties in children It also highlights particular clinical challenges and controversies in the management of pediatric dysphagia It is unique in that it incorporates the perspectives of multiple types of clinicians that care for these patients including otolaryngologists gastroenterologists pulmonologists speech pathologists occupational therapists and lactation consultants In doing so this text will encourage cross specialty pollination of ideas and knowledge as well as stimulate further research in the field Part 1 of

the text begins with an overview of the anatomy and physiology of swallowing with a focus on normal development as we currently understand it. It also discusses new information regarding reflexive interactions between the larynx and esophagus that potentially influence swallowing. It then moves on to a discussion of the advantages and limitations of currently available diagnostic modalities and highlights current controversies regarding frame rate radiation exposure, breastfeeding infants, and grading of studies. Additionally, it reviews the current literature regarding medical and behavioral based therapy options including thickening options, oromotor therapy, and controversies concerning strict NPO. Part 2 addresses specific diagnoses which can cause or be associated with dysphagia such as prematurity, velopharyngeal insufficiency, ankyloglossia, laryngeal clefts, laryngomalacia, vocal fold paralysis, and cricopharyngeal dysfunction. The text goes on to explore the pathophysiology and treatment options for each. Anatomic, inflammatory, and neuromuscular esophageal causes of dysphagia are also evaluated. In addition, it delves into the impact of craniofacial anomalies, sialorrhea, and psychological factors on swallowing. Finally, it discusses how a multidisciplinary aerodigestive team can help streamline multidisciplinary care for individual patients. It will incorporate information pertinent to the different roles, tools, and views of a multidisciplinary dysphagia team including how pediatric otolaryngologists, gastroenterologists, pulmonologists, speech language pathologists, occupational therapists, and dietitians can collaborate to provide optimal evaluation and care of these often challenging patients, especially for those who are at high risk of complications related to aspiration.
