**Fertility, Family Planning and Population Policy in China** Chiung-Fang Chang, Che-Fu Lee, Sherry L.

McKibben, Dudley L. Poston, Carol S. Walther, 2005-12-16 China's one child population policy first initiated in 1979 has had an enormous effect on the country's development. By reducing its fertility in the past two decades to less than two children per woman and developing a family planning program focused heavily on sterilization and abortion, China has undergone a significant transition in status to a demographically developed country. Bringing together contributions from leading academics, this book looks at the impact of the government's strict control over planning and population growth on the family, the wider society, and the country's demography. The contributors examine developments such as family planning policy and contraceptive use, biological and social determinants of fertility patterns, of family and marriage, and China's future population trends. As such, it will be essential reading for academics, researchers, policy makers, and government officials with an interest in China's population policy.

Population Growth and Sustainable Transport in China Pengjun Zhao, Dandan Yuan, 2023-03-22 This book discusses the links between population growth, migration, and the transport system in China. It first reviews the theories concerning the relationship between population growth, distribution, and transport systems from an international perspective, and then analyses the history of, and changes in, population growth, population migration, urbanisation, and population spatial distribution in China by using multiple data sources, including the census, China Family Panel Studies data, China Migrants Panel Studies data, and mobile phone data. Thirdly, it explores the effects of population growth and migration on transport infrastructures and services in terms of planning, investments, development, operation, and management. The book also evaluates the features, strengths, and weaknesses of various population policies on the basis of their impacts on transport, birth control, the hukou system, the migration management system, and the policies designed to limit the growth of large cities and encourage the growth of small cities. Further, it addresses transport policies in the context of their capacity to meet people's mobility and accessibility needs and other factors, including energy consumption.

environment pollution and regional development inequalities Examining the trends in population distribution and their influences on transport such as an increase in urban agglomeration and mega city regions in the east of China and population shrinkage in the cities and regions in northeast and west China it also investigates the new trends of rural migration and population movement during the Spring Festival and other public holidays and the challenges of these new trends for transport system Lastly the book discusses future directions and challenges sustainable population and transport policies and proposes population oriented transport strategies and accessibility based population distribution policies Relevant to China and other developing countries the book is a valuable resource for scholars interested in population studies sustainable transportation regional planning and development and environmental policy      **Family Planning in China** Karen

framework so crucial to a proper understanding of this country and the fifth of the world's population it contains. It is particularly suited to courses on China, its geography and development strategy. After the bloody events of Tiananmen Square in June 1989, China's geopolitics will continue to hold the world's attention. With this in view, the book also provides guides to further reading.

**China's Low Birth Rate and the Development of Population** Guo Zhigang, Wang Feng, Cai Yong, 2017-12-12

As the most populous country in the world, China's demographic challenges have always been too many for ecological system resources and the environment. However, by the early 1990s, fertility rate in China had dropped below the replacement level, and China's low fertility has now attracted the world's attention. This book is among the first studies to raise and examine questions on low fertility in China, believing that China has entered a new era featured by low birth rate and ageing population. Utilizing advanced research methods and models on low fertility to analyze China's census data, this book explores the issues from various perspectives: Methodologies employed in past population studies; policy making concerning fertility rate; underreporting of births and fertility rate estimates; fertility level of the migrant population; current population pattern; long-term population trends; population dynamics; and many other thought-provoking problems are covered. Finally, the book revisits China's population issues in the context of globalization. The 21st century has seen the new challenge of persistent population decrease and ageing worldwide, which along with economic globalization demands a new understanding of the changes in population pattern and their consequences. Researchers and students in China's demographic and social studies will be attracted by the insightful analysis and rich materials provided in the book. Population policy makers will also benefit from it.
