Board of Regents of Education, 1914 **History as a Science and the System of the Sciences** Thomas M. Seebohm, 2015-04-09 This volume goes beyond presently available phenomenological analyses based on the structures and constitution of the lifeworld It shows how the science of history is the mediator between the human and the natural sciences It demonstrates that the distinction between interpretation and explanation does not imply a strict separation of the natural and the human sciences Finally it shows that the natural sciences and technology are inseparable but that technology is one sidedly founded in pre scientific encounters with reality in the lifeworld In positivism the natural sciences are sciences because they offer causal explanations testable in experiments and the humanities are human sciences only if they use methods of the natural sciences For epistemologists following Dilthey the human sciences presuppose interpretation and the human and natural sciences must be separated There is phenomenology interested in psychology and the social sciences that distinguish the natural and the human sciences but little can be found about the historical human sciences This volume fills the gap by presenting analyses of the material foundations of the understanding of expressions of other persons and of primordial recollections and expectations founding explicit expectations and predictions in the lifeworld Next it shows on the basis of history as applying philological methods in interpretations of sources the role of a universal spatio temporal framework for reconstructions and causal explanations of what has really happened **A Critical History and Philosophy of Psychology** Richard T. G. Walsh, Thomas Teo, Angelina Baydala, 2014-03-20 In line with the British Psychological Society s recent recommendations for teaching the history of psychology this comprehensive undergraduate textbook emphasizes the philosophical cultural and social elements that influenced psychology s development The authors demonstrate that psychology is both a human i e psychoanalytic or phenomenological and natural i e cognitive science exploring broad social historical and philosophical themes such as the

role of diverse cultures and women in psychology and the complex relationship between objectivity and subjectivity in the development of psychological knowledge The result is a fresh and balanced perspective on what has traditionally been viewed as the collected achievements of a few great men With a variety of learning features including case studies study questions thought experiments and a glossary this new textbook encourages students to critically engage with chapter material and analyze themes and topics within a social historical and philosophical framework **Understanding History** Bertrand Russell, 2014-12-02 Essays on topics from nuclear physics to the role of faith in society from the Nobel Prize winning philosopher Originally written in 1943 and published in 1957 by Philosophical Library Inc these vigorous essays from one of the most distinguished minds of our time reveal several facets of the English philosopher's thought The title piece exposes the deadliness of the academic approach to the past and shows how the reading of history can be a vivid intellectual pleasure In *The Value of Free Thought* Russell once again proves himself a ruthless foe of stifling orthodoxy and a fearless champion of free thought free action and free speech Then in a series of articles on a subject near to his heart he explores the effect of atomic physics on such philosophic concepts as materialism idealism determinism and faith In short here is a complete banquet of provocative ideas wise and witty skeptical and profound to whet the appetite of every discriminating reader Legislative Documents Ohio. General Assembly, 1887 **Report of the Regents of Education of the State of South Dakota to the Governor** South Dakota. Regents of Education, 1914 Striving for the Whole Rainer Diriwachter, Jaan Valsiner, 2011-12-31 This unusual collection explores the development of ideas in psychology's past and shapes them into a valuable resource for ideas in the discipline's future with particular emphasis on holistic traditions in psychology Diriwachter and Valsiner focus on developmental holistic psychology as advocated by the second school of Leipzig in Germany Although largely neglected this school of thought has provided some of the fundamental ideas necessary for a truly holistic approach in psychology This volume includes Leibniz's dynamic holism and Ehrenfels' discussion about Gestalt qualities which has generally been acknowledged as a major milestone in the formation of Gestalt psychology Each chapter looks at the possible future of holistic psychology *Striving for the Whole* contains several well thought out discussions on possible elaborations of holistic psychology by contrasting it with Ernst Boesch's cultural psychology Pierre Janet's theory on emotions and Jan Smuts' holistic approach to personality theory Discussions of holistic approaches in biology and evolutionary psychology as well as a renewed look at Lloyd Morgan's comparative methodology complete the volume *Striving for the Whole* has been written by an international group of authors and will be of interest to students of the social sciences and intellectual history and anyone who wants to dive deeper into holistic approaches that maintain their ties with empirical methodology It is ideal for graduate and upper level undergraduate courses in psychology Library of Congress Subject Headings Library of Congress, Library of Congress. Office for Subject Cataloging Policy, 2005 Subject Guide to Books in Print, 1991 *Revisiting Discovery and Justification* Jutta Schickore, Friedrich Steinle, 2006-04-18 The distinction between

the contexts of discovery and justification has had a turbulent career in philosophy of science At times celebrated as the hallmark of philosophical approaches to science at times condemned as ambiguous distorting and misleading the distinction dominated philosophical debates from the early decades of the twentieth century to the 1980s Until today it informs our conception of the content domain and goals of philosophy of science It is due to this fact that new trends in philosophy of experimentation and history and sociology of science have been marginalized by traditional scholarship in philosophy To acknowledge properly this important recent work we need to re open the debate about the nature development and significance of the context distinction about its merits and flaws The contributions to this volume provide close readings and detailed analyses of the original textual sources for the context distinction They revise those accounts of forerunners of the distinction that have been written through the lens of Logical Empiricism They map clarify and analyse the derivations and mutations of the context distinctions as we encounter them in current history and philosophy of science The re evaluation of the distinction helps us deal with the philosophical challenges that the New Experimentalism and historically socio politically and economically oriented science studies have placed before us This volume thus clears the ground for the productive and fruitful integration of these new developments into philosophy of science
