software successfully providing a fast automatic and flexible route to the design and analysis of the connections in steel structures Steel Connection Analysis explains several general methods which have been researched and programmed during many years and that can be used to tackle the problem of connection analysis in a very general way with a limited and automated computational effort It also covers several problems related to steel connection analysis automation Uses Finite Element Analysis to discuss the analysis of structural steel connections Analysis is applicable to all connections in steel structures The methodology is the basis of the commercially successful CSE connection analysis software Analysis is fast and flexible Structural engineers fabricators software developing firms university researchers and advanced students of civil and structural engineering will all benefit from Steel Connection Analysis
