Economic Policy Options for a Prosperous Nigeria P. Collier, C. Soludo, C. Pattillo, 2008-04-24 This book demonstrates that there is sufficient evidence on the Nigerian economy and society to inform many policy issues and reveals the current problems and policy options that a democratic Nigeria will need to debate and resolve It presents an agenda of reform as unfinished business

The Second

Paycheck Alice Nakamura, Masao Nakamura, 2014-05-10 The Second Paycheck A Socioeconomic Analysis of Earnings is a comprehensive analysis of the socioeconomic aspects of earnings with emphasis on the dynamic labor supply behavior of men and women The importance of dynamic models in understanding labor supply is highlighted The impact of children on the dynamic labor supply of men and women and how changes in marital status affect female labor supply are also discussed Comprised of eight chapters this book begins by considering several reasons why the labor force behavior of married women has become an important topic in the mainstream of the economics literature The work behavior of married women is examined in the larger context of the work behavior of married and unmarried men and women Furthermore a microanalytic simulation approach to behavioral research and forecasting is presented The behavioral model used in this study is then described In addition to coefficient estimates the probabilities of work expected wage rates and expected hours of work are analyzed A Heckman type model of work behavior is also generalized to include unemployment This monograph is intended for economists sociologists students of labor economics researchers forecasters and those from all backgrounds who are interested in understanding or forecasting the employment and earnings behavior of women

Women and the World of Work Anne Hoiberg, 2012-12-06 From August 4 to 8 1980 the Science Committee of the North Atlantic Treaty Organization NATO sponsored the symposium Women and the World of Work which was held at the Hotel Sintra Estoril in the coastal area south of Lisbon Portugal This symposium has been in progress since 1977 when the idea to prepare a proposal for a NATO sponsored symposium on the topic of women and the military was first suggested by Dr Walter Wilkins then Scientific Director of the Naval Health Research Center San Diego California At that time and during the previous 5 years increasing numbers of women were being recruited into military service not only in the United States but also in several NATO allied countries Few research projects on the utilization of women in the military had been reported in the scientific literature with the exception of work conducted at the University of Chicago and Naval Health Research Center Several investigators however were identified who had recently initiated research in this area and who expressed interest in participating in the proposed symposium A few months after submitting the proposal Dr B A Bayraktar Director of the Scientific Affairs Division responded that the members of the Science Committee recommended the deletion of those segments of the tentative program which pertained to women and the military The reason given for this suggested change was that the topic chosen was similar to the theme of other recent international conferences

Female labor Supply, 1980 *Public Economics and the Household* Patricia Apps, Ray Rees, 2009-03-05 Economic models in much of the public economics literature have been slow to reflect the significant changes towards double income households throughout the developed world This graduate level text develops a more sophisticated approach to household economics one that allows for multiple income earners and shared decision making This approach is used to present a fundamentally new view of consumption It then applies this to an analysis of tax systems combining theoretical analysis of optimal taxation and tax reform with careful

empirical study of the characteristics of income tax systems in four different countries Australia Germany the UK and the USA The book is particularly concerned with analysing both theoretically and empirically the impact of taxation on female labour supply and identifying its effects on work incentives and fairness of income distribution All this adds up to a fascinating new approach to the economics of household for researchers in both public and private sectors [Nominations](#) United States. Congress. Senate. Committee on Labor and Human Resources,1981 [The New Palgrave Dictionary of Economics](#) ,2016-05-18 The award winning The New Palgrave Dictionary of Economics 2nd edition is now available as a dynamic online resource Consisting of over 1 900 articles written by leading figures in the field including Nobel prize winners this is the definitive scholarly reference work for a new generation of economists Regularly updated This product is a subscription based product *Handbook of Labor Economics* Orley Ashenfelter,David Card,1999-11-18 Modern labor economics has continued to grow and develop since the first volumes of this Handbook were published The subject matter of labor economics continues to have at its core an attempt to systematically find empirical analyses that are consistent with a systematic and parsimonious theoretical understanding of the diverse phenomenon that make up the labor market As before many of these analyses are provocative and controversial because they are so directly relevant to both public policy and private decision making In many ways the modern development in the field of labor economics continues to set the standards for the best work in applied economics This volume of the Handbook has a notable representation of authors and topics of importance from throughout the world [Behavioral Simulation Methods in Tax Policy Analysis](#) Martin Feldstein,2007-12-01 These thirteen papers and accompanying commentaries are the first fruits of an ongoing research project that has concentrated on developing simulation models that incorporate the behavioral responses of individuals and businesses to alternative tax rules and rates and on expanding computational general equilibrium models that analyze the long run effects of changes on the economy as a whole The principal focus of the project has been on the microsimulation of individual behavior Thus this volume includes studies of individual responses to an over reduction in tax rates and to changes in the highest tax rates a study of alternative tax treatments of the family and studies of such specific aspects of household behavior as tax treatment of home ownership charitable contributions and individual saving behavior Microsimulation techniques are also used to estimate the effects of alternative policies on the long run financial status of the social security program and to examine the effects of alternative tax rules on corporate investment and of foreign source income on overseas investment The papers devoted to the development of general equilibrium simulation models to include an examination of the implications of international trade and capital flows a study of the effects of capital taxation that uses a closed economy equilibrium model and an examination of the effect of switching to an inflation indexed tax system In the volume s final paper a life cycle model in which individuals maximize lifetime utility subject to a lifetime budget constraint is used to simulate the effects of tax rules on personal savings [Limited-Dependent and Qualitative Variables in](#)

Econometrics G. S. Maddala, 1986-06-27 This book presents the econometric analysis of single equation and simultaneous equation models in which the jointly dependent variables can be continuous categorical or truncated Despite the traditional emphasis on continuous variables in econometrics many of the economic variables encountered in practice are categorical those for which a suitable category can be found but where no actual measurement exists or truncated those that can be observed only in certain ranges Such variables are involved for example in models of occupational choice choice of tenure in housing and choice of type of schooling Models with regulated prices and rationing and models for program evaluation also represent areas of application for the techniques presented by the author Work, Wages, and Welfare in a Developing Metropolis Rakesh Mohan, 1986 Examining five key urban sectors of Bogota Columbia housing transport employment location labor markets and public finance this book provides a well written and concise summary of one of the largest research projects undertaken on a major city in a developing country **Household and Family Economics** Paul L. Menchik, 2012-12-06 This volume is a compilation of essays by prominent economists in the area of household and family economics The volume attempts to cover some areas in the field and focuses on topics such as income determination and the intergenerational transmission of income generation the changing role of women in the labor force fertility and income tax treatment of the family Each essay is followed by a discussion of part or all of its contents **Labor Supply**, Social Experimentation Jerry A. Hausman, David A. Wise, 2007-12-01 Since 1970 the United States government has spent over half a billion dollars on social experiments intended to assess the effect of potential tax policies health insurance plans housing subsidies and other programs Was it worth it Was anything learned from these experiments that could not have been learned by other and cheaper means Could the experiments have been better designed or analyzed These are some of the questions addressed by the contributors to this volume the result of a conference on social experimentation sponsored in 1981 by the National Bureau of Economic Research The first section of the book looks at four types of experiments and what each accomplished Frank P Stafford examines the negative income tax experiments Dennis J Aigner considers the experiments with electricity pricing based on time of use Harvey S Rosen evaluates housing allowance experiments and Jeffrey E Harris reports on health experiments In the second section addressing experimental design and analysis Jerry A Hausman and David A Wise highlight the absence of random selection of participants in social experiments Frederick Mosteller and Milton C Weinstein look specifically at the design of medical experiments and Ernst W Stromsdorfer examines the effects of experiments on policy Each chapter is followed by the commentary of one or more distinguished economists Handbook of Econometrics James J. Heckman, Edward Leamer, 2007-12-13 As conceived by the founders of the Econometric Society econometrics is a field that uses economic theory and statistical methods to address empirical problems in economics It is a tool for empirical discovery and policy analysis The chapters in this volume embody this vision and either implement it directly or provide the tools for doing so This vision is not shared by those who view econometrics as a branch of statistics

rather than as a distinct field of knowledge that designs methods of inference from data based on models of human choice behavior and social interactions All of the essays in this volume and its companion volume 6B offer guidance to the practitioner on how to apply the methods they discuss to interpret economic data The authors of the chapters are all leading scholars in the fields they survey and extend Part of the renowned Handbooks in Economics Series Updates and expands the existing Handbook of Econometrics volumes An invaluable reference written by some of the world's leading econometricians
