Feral Future:

Feral Future Tim Low, 2002-12 A decade ago Tim Low journeyed to the remote northernmost tip of Australia Instead of the pristine rain forests he expected he found jungles infested with Latin American carpet grass and feral cattle That incident helped inspire Feral Future a passionate account of the history and implications of invasive species in that island nation with consequences for ecological communities around the globe Australia is far from alone in facing horrific ecological and economic damage from invading plants and animals and in Low s capable hands Australia s experiences serve as a wake up call for all of us He covers how invasive species like cane toads and pond apple got to Australia often through misguided but intentional introductions and what we can do to stop them He also covers the many pests that Australia has exported to the world including the paperbark tree Melaleuca that infests hundreds of thousands of acres in south Florida Anticipation,

Agency and Complexity Roberto Poli, Marco Valerio, 2019-02-15 This volume presents a selection of the Proceedings of the Workshop on Anticipation Agency and Complexity held in Trento Italy on April 2017 The contributions contained in the book brilliantly revolve around three core concepts agency complexity and anticipation giving precious insights to further define the discipline of anticipation In a world that moves increasingly fast constantly on the verge of disruptive events more and more scholars and practitioners in any field feel in need of new approaches to make sense of the complexity and uncertainty that the future seems to bear The theory of anticipation tries to describe how possible futures are intrinsically intertwined with the present

experiences with the more than human world during childhood and young adulthood The book addresses the question of how and why activists come to value nonhuman animals and the natural world as worthy of protection Emotions and memories of wonder love compassion anger and grief shape activists protest practices and help us understand their deep rooted dedication to the planet and its creatures Drawing on analyses of activist art music and writings as well as interviews and participant observation in activist communities Sarah M Pike delves into the sacred duties of these often misunderstood and marginalized groups with openness and sensitivity **Australia, New Zealand, and the Pacific** Donald S.

Garden,2005-08-19 A fascinating study of the environmental history of Australia New Zealand and the islands of the Pacific from the time of the dinosaurs to the present day Of interest to students and academics alike this book provides a much needed synthesis of the recent literature on the environmental history of Australia and Oceania Part of ABC CLIO s Nature and Human Societies series this book maps out the key trends in the region s environmental history charting the creation of the Australian continent from the ancient land mass of Gondwanaland to the arrival of humans Especially fascinating are the chapters highlighting how successive waves of human migration created environmental havoc throughout the region leading to the collapse of the Easter Island civilization and the spread of nonindigenous flora and fauna From the controversies over the reasons why creatures such as the marsupial lion and the giant kangaroo became extinct to such contemporary problems as deforestation and global warming this book contains sobering lessons for us all **Considering Animals** Carol

Freeman,Elizabeth Leane,Yvette Watt,2011 Considering Animals draws on the expertise of scholars trained in the biological sciences humanities and social sciences to investigate the complex and contradictory relationships humans have with nonhuman animals Taking their cue from the specific animal moments that punctuate these interactions the essays engage with contemporary issues and debates central to human animal studies the representation of animals the practical and ethical issues inseparable from human interactions with other species and perhaps most challengingly the compelling evidence that animals are themselves considering beings Case studies focus on issues such as animal emotion and human sentimentality the representation of animals in contemporary art and in recent films such as March of the Penguins Happy Feet and Grizzly Man animals experiences in catastrophic events such as Hurricane Katrina and the SARS outbreak and the danger of overvaluing the role humans play in the earth s ecosystems From Marc Bekoff s moving preface through to the last essay Considering Animals foregrounds the frequent sometimes uncanny exchanges with other species that disturb our self contained existences and bring into focus our troubled relationships with them Written in an accessible and jargon free style this collection demonstrates that in the face of species extinction and environmental destruction the roles and fates of animals are too important to be left to any one academic discipline **Decolonizing Extinction** Juno Salazar

Parreñas,2018-08-09 In Decolonizing Extinction Juno Salazar Parre as ethnographically traces the ways in which colonialism decolonization and indigeneity shape relations that form more than human worlds at orangutan rehabilitation centers on

Borneo Parre as tells the interweaving stories of wildlife workers and the centers endangered animals while demonstrating the inseparability of risk and futurity from orangutan care Drawing on anthropology primatology Southeast Asian history gender studies queer theory and science and technology studies Parre as suggests that examining workers care for these semi wild apes can serve as a basis for cultivating mutual but unequal vulnerability in an era of annihilation Only by considering rehabilitation from perspectives thus far ignored Parre as contends could conservation biology turn away from ultimately violent investments in population growth and embrace a feminist sense of welfare even if it means experiencing loss and pain Zoo Ethics Jenny Gray,2017-07-03 Well run modern zoos and aquariums do important research and

conservation work and teach visitors about the challenges of animals in the wild and the people striving to save them They help visitors to consider their impact and think about how they can make a difference Yet for many there is a sense of disquiet and a lingering question remains can modern zoos be ethically justified Zoo Ethics examines the workings of modern zoos and considers the core ethical challenges that face those who choose to hold and display animals in zoos aquariums or sanctuaries Using recognised ethical frameworks and case studies of wicked problems this book explores the value of animal life and the impacts of modern zoos including the costs to animals in terms of welfare and the loss of liberty It also considers the positive welfare and health outcomes of many animals held in zoos the increased attention and protection for their species in the wild and the enjoyment and education of the people who visit zoos A thoughtfully researched work written in a highly readable style Zoo Ethics will empower students of animal ethics and veterinary sciences zoo and aquarium professionals and interested zoo visitors to have an informed view of the challenges of compassionate conservation and to develop their own defensible ethical position **Hymenoptera and Conservation** T. R. New,2012-07-02 Hymenoptera the

bees wasps and ant are one of the largest insect orders and have massive ecological importance as pollinators and as predators or parasitoids of other insects These roles have brought them forcefully to human notice as governors of some key ecological services that strongly influence human food supply Recent declines of pollinators and introductions of alien pests or biological control agents are only part of the current concerns for conservation of Hymenoptera and of the interactions in which they participate in almost all terrestrial ecosystems Both pests and beneficial species abound within the order sometimes closely related within the same families Many taxa are both difficult to identify and very poorly known This global overview the first such account for the whole of the Hymenoptera discusses a broad range of themes to introduce the insects and their conservation roles and needs and how their wellbeing may be approached The book is intended as a source of information for research workers conservation managers and naturalists as an introduction to the importance of this dominant insect order Osiris, Volume 40 Tamar Novick,Lisa Onaga,Gabriel N. Rosenberg,2025-07-14 Situates animal mobility within the politics of movement opening new perspectives in the history of science Human societies often come to know the natural world by examining animals even as animals frequently both willful and animate can elude human grasps

and challenge human aims. Animals and their movements have underpinned many methodological, moral and epistemic dilemmas that generatively trouble the field. Featuring a range of geographies, species, languages and cultures, the contributions in this volume broaden the view of the historical roles animals play in knowledge production processes. Organized according to three scales of animal movement: individuals, groups, systems, the twelve richly illustrated inquiries are situated in different time periods from the sixteenth century Ottoman Empire to the recent globalized past and introduce varied forms, capacities and politics of movement associated with animals. The analytic attention to animal mobility deepens comprehension of animal agency and human-animal interactions in unexpected spaces including airports, entertainment venues, living rooms, dirt roads and waterways. Taken together, the case studies in this volume reconsider how, where and by whom science is done.

The Life and Times of the Murray Cod Paul Humphries, 2023-05-01. The Murray cod is Australia's largest and most iconic freshwater fish. Tales of the species have long been part of Australian folklore and this book describes its history, biology, cultural significance and conservation. *The Life and Times of the Murray Cod* reveals the many roles the species has played throughout the history of the continent from its place at the heart of the Aboriginal creation story of the Murray River to its role as a food source for explorers surveying inland Australia in the early 1800s to its forming the basis of a commercial fishing industry up to the early 2000s. Living for upwards of half a century and growing to astonishing sizes today, the Murray cod is a hugely popular target for recreational fishing, but its future is anything but assured. In the face of climate change, river management and fishing pressure, much needs to be done to ensure this extraordinary fish swims confidently into the future. *The Life and Times of the Murray Cod* draws on historical, anecdotal and scientific sources to reveal what makes this remarkable species so special and will appeal to fishers, natural resource managers, conservationists and any reader interested in natural history.

International Life Writing Paul Longley Arthur, 2013-10-31. Representing the best of international life writing scholarship, this collection reveals extraordinary stories of remarkable lives. These wide-ranging accounts span the Americas, Britain, Europe, Asia, Africa, Australia and the Pacific over a period of more than two centuries. Showing fascinating connections between people, places and historical eras, they unfold against the backdrop of events and social movements of global significance that have influenced the world in which we live today. The effects of colonialism, war and conflict on individual lives can be seen throughout the book alongside themes of transnational connection, displacement and exile, migration of individuals, families and peoples, and recovery and recuperation through memory and writing, creativity and performance. This book was originally published as a special issue of the journal *Life Writing*.

Facing the Wild Chilla Bulbeck, 2012-06-25. What do wild animals mean to humans? Will they survive both rampant habitat loss and extinction caused by human encroachment and, as ecotourists, our enthusiasm for them? With ecotourism now the fastest growing segment of tourism and encounters with wild animals be it

swimming with dolphins going on safari or bird watching ever more popular these are critical questions Yet until now little has been known about why people crave encounters with wild animals and the meaning for the ecotourism industry conservation efforts and society at large Facing the Wild is the first serious empirical examination of why people seek out animals in their natural environment what the desire for this experience tells us about the meanings of animals nature authenticity and wilderness in contemporary industrialized societies and whether visitors change their environmental perspectives and behaviour as the custodians of wildlife parks would like them to The book explores the contradictions and ambivalence that so many people experience in the presence of wild nature in loving it we may diminish it and in the act of wanting to see it we may destroy it Ultimately the book makes a case for respectful stewardship of a hybrid nature and provides insight for both practitioners and ecotourists alike

Fencing for Conservation Michael J. Somers, Matthew Hayward, 2011-11-23 The conflict between increasing human population and biodiversity conservation is one of the IUCN s key threatening processes Conservation planning has received a great deal of coverage and research as a way of conserving biodiversity yet while theoretically successful it has never been tested Simple lines on maps to illustrate conservation areas are unlikely to be successful in the light of human encroachment It may be that some form of overt display is necessary to ensure the protection of reserves This may be signage presence of guards rangers or physical fencing structures The need for some form of barrier goes beyond restricting human access The megafauna of Africa pose a genuine threat to human survival In southern Africa fences keep animals in and protect the abutting human population Elsewhere fencing is not considered important or viable Where poverty is rife it won t take much to tip the balance from beneficial conservation areas to troublesome repositories of crop raiders diseases and killers Conversely in New Zealand fences are used to keep animals out Introduced species have decimated New Zealand s endemic birds reptiles and invertebrates and several sites have been entirely encapsulated in mouse proof fencing to ensure their protection Australia faces the same problems as New Zealand however surrounds its national parks with cattle fences Foxes and cats are free to enter and leave at will resulting in rapid recolonisation following poisoning campaigns How long will these poison campaigns work before tolerance aversion or resistance evolves in the introduced predator populations

Meanderings in the Bush Richard MacMillen, Barbara

MacMillen, 2009-07-15 The Channel Country is of special interest because its extreme aridity is disrupted unpredictably by summer monsoonal rains causing massive flooding and is followed by prodigious growth of plants and reproduction of animals before returning to daunting conditions of drought Yet it is a region teeming with life both plant and animal possessing unusual capacities for existing there It is also a region favoured by hardy pastoralists and their livestock who have learned to coexist with this harsh climate In *Meanderings in the Bush* the authors describe their many adventures and misadventures in the region with its climate its animals and its human inhabitants They also discuss results of their research which reveals some of the secrets for survival of many of the native animals including marsupials rodents birds and the remarkable desert crab These studies are cast in the light of both the prehistoric and historic records of the Lake Eyre Basin including the probable impacts of changing and or stable climates Aboriginal occupation later European pastoral development and the influences of introduced exotic mammals
