Embryic And Fetal Development Reproduction In Mammals Series:

Reproduction in Mammals: Embryonic and fetal development Colin Russell Austin, Roger Valentine Short, 1972 V 1 Germ cells and fertilization V 2 Embryonic and fetal development V 3 Hormones in reproduction V 4 Reproductive patterns V 5 Artificial control of reproduction *Uterine and Embryonic Factors in Early Pregnancy* Jerome F. Strauss III, C. Richard Lytle, 2012-12-06 Human reproduction is the most dynamic of processes The events which lead to the birth of a normal healthy infant have their origin long before actual fertilization Indeed the whole process can be looked upon as a continuum Human fertilization and early development once sequestered in the protective environment of the fallopian tubes and uterus have now been exposed in the laboratory These events have over time been extensively observed and catalogued in animal models The tools of modern morphology and molecular biology have reopened issues long since considered settled as facets of early reproduction are reexplored This volume consisting of the proceedings of a workshop on uterine and embryonic factors in early pregnancy has been designed to enhance that effort Attention is focused largely on early embryonal development with special attention to the interrelationship between the embryo and the uterus in early pregnancy Each of the contributing scientists brings with him or her the perspective of one specific discipline or another The common denominator is the application of emerging techniques in modern molecular biology to problems pertaining to embryonal uterine interaction The goal is to consider specific areas of concern in a multidisciplinary way and to reexplore the factors behind early development and implantation Uterine complement the function of uterine macrophages immunoregulatory loops in the peri implantation period colony stimulating factors and interferon like factors are reviewed and their interrelationship explored Uterine angiogenesis factors as well as embryonic growth factors are also considered

Reproduction in Mammals: Volume 2, Embryonic and Fetal Development C. R. Austin, R. V. Short, 1982 Cell Signaling During Mammalian Early Embryo Development Henry J. Leese, Daniel R. Brison, 2015-05-08 The book considers signaling events from the zygote embryo through to the blastocyst with relevant data from embryonic stem ES cells including dialogue with the extracellular environment and with the maternal tract during the implantation process Application of the knowledge described to improve the success of human and animal assisted conception is considered where appropriate but the focus is largely on fundamental rather than applied cell molecular biology as this is the area that has historically been neglected While the general features of metabolism during preimplantation development are well established especially in terms of nutrient requirements uptake and fate remarkably little is known about early embryo signaling events intracellular or intercellular between individual embryos in vitro or with the female reproductive tract in vivo This contrasts with the wealth of information on cell signaling in somatic cells and tissues as a glance at any textbook of biochemistry illustrates This lack of information is such that our understanding of the molecular cell biology of early embryos a prerequisite to defining the mechanisms which regulate development at this critical stage of the life cycle is seriously incomplete This volume is the

first to address this issue by describing the current state of knowledge on cell signaling during mammalian early embryo development and highlighting priority areas for research **Reproductive Physiology of Marsupials** C. Hugh

Tyndale-Biscoe, Marilyn Renfree, 1987-01-30 The results of this compilation of new research on the reproductive physiology of marsupials reveal much about their patterns of reproduction and evolution in comparison to monotremes and eutherians

Mammalian Evolution, Diversity and Systematics Frank Zachos, Robert Asher, 2018-10-22 There are nearly 6 000 mammalian species among them our own Research on our evolutionary cousins has a long history but the last 20 years have seen particularly rapid progress in disentangling the interrelationships and evolutionary history of mammals The present volume combines up to date reviews on mammalian phylogenetics with paleontological taxonomic and evolutionary chapters and also summarizes the historical development of our insights in mammalian relationships and thus our own place in the Tree of Life Our book places the present biodiversity crisis in context with one in four mammal species threatened by extinction and reviews the distribution and conservation of mammalian diversity across the globe This volume is the introductory tome to the new Mammalia series of the Handbook of Zoology and will be essential reading for mammalogists zoologists and conservationists alike **Marshall's Physiology of Reproduction** G.E. Lamming, 2013-04-17 The most comprehensive review available today Marshall's Physiology of Reproduction is the classic reference source for teachers and researchers of animal reproduction Internationally recognised leaders in their respective fields provide an analytical synopsis of the area review current research and outline their philosophical approach to the subject Volume 3 of the fourth edition reviews the processes of pregnancy and lactation in mammals incorporating marsupials non primate eutherians and primates including man Book one covers pregnancy from ovulation to pre parturition book two reviews fetal physiology parturition and lactation The extensive coverage of the physiology of human reproduction and lactation makes this volume a particularly important reference source for researchers in human fertility control while the review of large animal reproduction is relevant to veterinary and para veterinary workers **Animal Biotechnology** L.A. Babiuk, J.P. Phillips, Murray

Moo-Young, 2013-10-22 The advent of biotechnology has the potential to develop a variety of novel or better quality products for the treatment of a large number of diseases in livestock In addition as we understand more about the reproductive physiology of animals the potential exists to dramatically increase the productivity of animals through better therapeutics and diagnostics for the control of many infectious diseases Productivity can also be increased through animal breeding strategies including gene transfer micromanipulation of embryos and gamete sex selection As well as being a valuable reference to current knowledge in these areas this first supplement to Comprehensive Biotechnology also looks at societal concerns over the use of antibiotics and chemical residues in meat and milk products which are forcing biotechnologists to investigate more natural means of controlling infection by stimulating the animal's own immune system to combat infection The identification of a variety of cytokines which are involved in regulating immune responses provides opportunities to use

the animal's natural defence mechanisms to combat many infections or increase the animal's resistance to such infections. These approaches should provide tools for eventual elimination of specific diseases from counties, regions or whole continents.

biotechnologies and challenges in their application Stefan Gregore Ciornei, Mihai Cenariu, Graça Lopes, 2025-02-14. Animal reproductive biotechnologies encompass a diverse array of scientific techniques aimed at improving livestock breeding, enhancing animal health and conserving endangered species. These technologies include artificial insemination, AI, embryo transfer, ET, cloning and gene editing. By leveraging these methods, researchers and farmers can enhance desirable traits in livestock such as disease resistance, meat quality and milk production, thereby increasing agricultural productivity and food security. Additionally, in conservation efforts, reproductive biotechnologies play a crucial role in preserving genetic diversity and restoring populations of endangered species. However, the application of these technologies faces numerous challenges, including infertility, ethical concerns surrounding animal welfare, genetic modification and the potential environmental impact of genetically modified organisms. Furthermore, regulatory frameworks vary across regions and species, posing obstacles to the widespread adoption of these technologies. Addressing these challenges is essential for ensuring the responsible use of animal reproductive biotechnologies while maximizing their potential benefits for agriculture and conservation efforts. The research topic, Animal Reproductive biotechnologies and challenges in their application, addresses the significant problem of animal infertility, which poses considerable challenges in agricultural production, breeding programs and conservation efforts. One key aspect to address this issue involves leveraging reproductive biotechnologies to overcome infertility barriers in various animal species. Advanced techniques such as in vitro fertilization (IVF), intracytoplasmic sperm injection (ICSI) and embryo transfer (ET) offer promising solutions for assisting animals with reproductive challenges. Recent advances in reproductive biotechnologies include the development of improved culture media for embryo development, optimization of cryopreservation techniques for gametes and embryos and the application of genomics to identify genetic markers associated with fertility traits. Additionally, research efforts focus on understanding the underlying causes of infertility in animals, including genetic, environmental and physiological factors, to develop targeted interventions and management strategies. By integrating scientific advancements with comprehensive management approaches, researchers aim to enhance fertility outcomes in animals and thereby improve agricultural productivity, breeding efficiency and the conservation of endangered species. **Environmental Contaminants and Endocrine Health** Oliana Carnevali, Gary Hardiman, 2023-05-30

Environmental Contaminants and Endocrine Health focuses specifically on contaminants with hormonal disrupting activities. The book provides insights into the multiple effects of endocrine disrupting chemicals (EDCs) and their mechanism of action.

MoA on metabolism reproduction and the multiple physiological roles of the endocannabinoid system which has recently been indicated as new target The content systematically covers EDC sources and effects EDCs as sources of disease and health impairment in laboratory models EDCs as the cause of disease and health impairment in humans and wild species and the removal of hazardous pollutants from wastewaters to highlight intervention mitigation and adaptation for reduced threat This content will be a foundational resource for academic and research staff in endocrinology and hormone toxicology as well as for professors researchers and students in these areas Includes important foundational coverage of the endocrine system definitions of EDC sources and descriptions model examples and mechanisms of action biological effects Provides coverage of EDC effects in humans and animals from metabolic alterations to epidemiological studies of fertility and metabolism Presents insights into the confirmed and suspected human diseases spectrum with origins linked to EDC exposure including cancers intellectual disabilities autism birth defects of the urethra hypospadias decreased sperm count increased rates of miscarriage obesity type 2 diabetes and more

Medical and Health Related Sciences Thesaurus,1985 *Ultrastructure of Reproduction* Jonathan van Blerkom,P. Motta,2012-12-06 Advances in the development and application of electron microscopic techniques have occurred recently such that the electron microscope has evolved to become an essential tool in both basic and clinical research Use of this instrument has contributed significantly to the formation of new perspectives and concepts concerning cell fine structure These structural perspectives are now being integrated with specific functional biochemical and pathophysiological events and processes of cells and tissues Most recently utilization of innovative electron microscopic techniques such as freeze fracture freeze etching and scanning and high voltage electron microscopy offers both the basic and clinical scientist potentially fundamental insights into many morphodynamic processes related to the activities of cells and tissues Such an approach has been especially rewarding when applied to the dynamic events of gametogenesis and early embryonic development The chapters comprising this book have been selected and edited with the aim of providing an up to date and comprehensive account of the most important aspects of vertebrate gametes and embryos as revealed by the integration of several different submicroscopic methods The organization of the chapters is designed to indicate present gaps in our knowledge of the developmental and reproductive biology of gametes and the developing embryo and possible lines of research which may lead to a lessening of these gaps

Gamete and Embryo-fetal Origins of Adult Diseases He-Feng Huang,Jian-Zhong Sheng,2013-11-19 The book Gamete and Embryo fetal Origins of Adult Diseases introduces various diseases resulting from the abnormal gametogenesis and embryo development which manifests as growth retardation birth defects or increased susceptibility to chronic metabolic diseases such as diabetes cardiovascular disease and cancer in childhood and adult life even fertility disorders and the risk of transgenerational transmission Six common kinds of these diseases are discussed in separate chapters The authors explore the connections between these diseases and epigenetic reprogramming rapid cell differentiation and organ formation and environmental influences including assisted reproductive

technology and adverse intrauterine environments With a summary of findings on the causes and progression of adult diseases at the phase of gametogenesis and embryo development this book provides insights into the pathogenesis of disease and aids in the treatment and prevention of disease meeting the requirement for improving the quality of the newborn population and effectively preventing and curing major diseases at an early stage This book offers new perspectives and will be an enlightening resource for obstetricians paediatricians epidemiologists endocrinologists and sanitarians Editor He Feng Huang M D is Professor and President of Women s Hospital School of Medicine Zhejiang University China Editor Jian Zhong Sheng Ph D is Professor at the Department of Pathology Pathophysiology School of Medicine Zhejiang University China
