Event Oriented Approaches In Geographic Information Science A Special Issue Of Spatial Cognition And Computation:

Event-Oriented Approaches in Geographic Information Science Kathleen Hornsby, Michael Worboys, 2004 This special issue originated from a workshop held in Holden Maine in November 2002 on the topic of event oriented approaches for geographic information science Following the workshop a call for papers was distributed resulting in nine papers being submitted for review Four of these papers appear in this special issue and cover events performed by humans from the psychological perspective information services that must guide users through a set of decision points that are based on ontologies that typically do not capture dynamic aspects such as events and actions multiaspect phenomena such as floods and wildfires that are not adequately and separately describable either as dynamic objects or as spatiotemporal fields and the foundations for ontologies of the dynamic world in which snapshot views of the world at a single time and happenings over time have an equal but complementary status

Land Use and Land Cover Semantics Ola Ahlqvist, Dalia Varanka, Steffen Fritz, Krzysztof Janowicz, 2018-10-08 Explore the Important Role that the Semantics of Land Use and Land Cover Plays within a Broader Environmental Context Focused on the information semantics of land use and land cover LULC and providing a platform for reassessing this field Land Use and Land Cover Semantics Principles Best Practices and Prospects presents a comprehensive overview of fundamental theories and best practices for applying semantics in LULC Developed by a team of experts bridging relevant areas related to the subject LULC studies ontology semantic uncertainty information science and earth observation this book encourages effective and critical uses of LULC data and considers practical contexts where LULC semantics can play a vital role The book includes work on conceptual and technological semantic practices including but not limited to categorization the definition of criteria for sets and their members metadata documentation for data reuse ontology logic restrictions reasoning from text sources and explicit semantic specifications ontologies vocabularies and design patterns It also includes use cases from applicable semantics in searches LULC classification spatial analysis and visualization issues of Big Data knowledge infrastructures and their organization and integration of bottom up and top down approaches to collaboration frameworks and interdisciplinary challenges such as EarthCube This book Centers on the link between planning goals objectives and policy and land use classification systems Uses examples of maps and databases to draw attention to the problems of semantic integration of land use cover data Discusses the principles used in a categorization Explores the origins and impacts of semantic variation using the example of land cover Examines how crowd science and human perceptions can be used to improve the quality of land cover datasets and more Land Use and Land Cover Semantics Principles Best Practices and Prospects offers an up to date account of land use land cover semantics looks into aspects of semantic data modeling and discusses current approaches ongoing developments and future trends The book provides guidance to anyone working with land use or land cover data looking to harmonize categories repurpose data or

Geographic Information Science Max J. Egenhofer, Christian Freksa, Harvey J. Miller, 2005-01-11 This section gives a description of notions used throughout this study Current achievements in developing action centered ontologies are also discussed

2.1 Ontologies

In the context of information extraction and retrieval different kinds of ontologies can be distinguished

1.5 Top level ontologies

describe very general concepts like space and time not depending on a particular domain Domain ontologies and task ontologies describe the vocabulary related to a generic domain or kind of task detailing the terms used in the top level ontology Application ontologies describe the concepts that depend on the particular domain and task within a specific activity Several investigations have been conducted to bring actions tasks to bear on ontologies Among them are Chandrasekaran et al 6 and Mizoguchi et al 23 in the fields of AI and Knowledge Engineering For the geospatial domain Kuhn 21 and Raubal and Kuhn 26 have attempted to support human actions in ontologies for transportation Acknowledging the importance of human actions in the geographic domain a research workshop was held in 2002 bringing together experts from different disciplines to share the knowledge and work on this issue

1.5.1 Camara

5 one of the workshop participants has proposed that action driven spatial ontologies are formed via category theory for the case of emergency action plans

publicly available online data **Visual Analytics of Movement** Gennady Andrienko, Natalia Andrienko, Peter Bak, Daniel Keim, Stefan Wrobel, 2013-09-20 Many important planning decisions in society and business depend on proper knowledge and a correct understanding of movement be it in transportation logistics biology or the life sciences Today the widespread use of mobile phones and technologies like GPS and RFID provides an immense amount of data on location and movement What is needed are new methods of visualization and algorithmic data analysis that are tightly integrated and complement each other to allow end users and analysts to extract useful knowledge from these extremely large data volumes This is exactly the topic of this book As the authors show modern visual analytics techniques are ready to tackle the enormous challenges brought about by movement data and the technology and software needed to exploit them are available today The authors start by illustrating the different kinds of data available to describe movement from individual trajectories of single objects to multiple trajectories of many objects and then proceed to detail a conceptual framework which provides the basis for a fundamental understanding of movement data With this basis they move on to more practical and technical aspects focusing on how to transform movement data to make it more useful and on the infrastructure necessary for performing visual analytics in practice In so doing they demonstrate that visual analytics of movement data can yield exciting insights into the behavior of moving persons and objects but can also lead to an understanding of the events that transpire when things move Throughout the book they use sample applications from various domains and illustrate the examples with graphical depictions of both the interactive displays and the analysis results In summary readers will benefit from this detailed description of the state of the art in visual analytics in various ways Researchers will appreciate the scientific precision involved software technologists will find essential information on algorithms and systems and practitioners will profit from readily accessible examples with detailed illustrations for practical purposes *Proceedings of the ... Cognitive and Linguistic Aspects of Geographic Space Martin Raubal,David M Mark,Andrew U. Frank,2013-01-30 20 years ago from July 8 to 20 1990 60 researchers gathered for two weeks at Castillo Palacio Magalia in Las Navas del Marques Avila Province Spain to discuss cognitive and linguistic aspects of geographic space This meeting was the start of successful research on cognitive issues in geographic information science produced an edited book D M Mark and A U Frank Eds 1991 *Cognitive and Linguistic Aspects of Geographic Space* NATO ASI Series D Behavioural and Social Sciences 63 Kluwer Dordrecht Boston London and led to a biannual conference COSIT a refereed journal *Spatial Cognition and Computation* and a substantial and still growing research community It appeared worthwhile to assess the achievements and to reconsider the research challenges twenty years later What has changed in the age of computational ontologies and cyber infrastructures Consider that 1990 the web was only about to emerge and the very first laptops had just appeared The 2010 meeting brought together many of the original participants but was also open to others and invited contributions from all who are researching these topics Early career scientists engineers and humanists working at the intersection of cognitive science and geographic information science were invited to help with the re assessment of research needs and approaches The meeting was very successful and compared the research agenda laid out in the 1990 book with achievements over the past twenty years and then turned to the future What are the challenges today What are worthwhile goals for basic research What can be achieved in the next 20 years What are the lessons learned This edited book will assess the current state of the field through chapters by participants in the 1990 and 2010 meetings and will also document an interdisciplinary research

agenda for the future
