Maria Saleth,1999-01-01 Physical limits to fresh water expansion an emerging reality in many parts of the world make absolute water scarcity inevitable The inability of the already developed water supply to meet an ever growing demand for fresh water also makes the emergence of relative water scarcity unavoidable Water scarcity both in its absolute and relative forms gets accentuated further by an increasing premium attached to water quality and ecological sustainability The water sector has undergone remarkable changes in recent years While past achievements were associated mainly with investment in new physical structures recent developments in the water sector are associated to a greater extent with improved management and institutional changes Although both the nature and direction of these institutional changes vary by country specific economic political cultural and resource realities there are clearly identifiable trends and patterns This report suggests a new methodology to shed light on the process of institution performance interaction It demonstrates the use of the methodology by applying it to an extensive cross country data set and by deriving policy guidance based on the results The authors aim to stimulate thought and debate about methodologies and strategies to be used in order to evaluate institutional change and institution performance interactions in the water sector      **Assessment Strategies for Knowledge**

**Judgment in Predictive Analytics** Matthias Seifert, 2023-06-02 This book highlights research on the behavioral biases affecting judgmental accuracy in judgmental forecasting and showcases the state of the art in judgment-based predictive analytics. In recent years, technological advancements have made it possible to use predictive analytics to exploit highly complex big data resources. Consequently, modern forecasting methodologies are based on sophisticated algorithms from the domain of machine learning and deep learning. However, research shows that in the majority of industry contexts, human judgment remains an indispensable component of the managerial forecasting process. This book discusses ways in which decision makers can address human behavioral issues in judgmental forecasting. The book begins by introducing readers to the notion of human-machine interactions. This includes a look at the necessity of managerial judgment in situations where organizations commonly have algorithmic decision support models at their disposal. The remainder of the book is divided into three parts, with Part I focusing on the role of individual-level judgment in the design and utilization of algorithmic models. The respective chapters cover individual-level biases such as algorithm aversion, model selection criteria, model judgment aggregation issues, and

implications for behavioral change In turn Part II addresses the role of collective judgments in predictive analytics The chapters focus on issues related to talent spotting performance weighted aggregation and the wisdom of timely crowds Part III concludes the book by shedding light on the importance of contextual factors as critical determinants of forecasting performance Its chapters discuss the usefulness of scenario analysis the role of external factors in time series forecasting and introduce the idea of mindful organizing as an approach to creating more sustainable forecasting practices in organizations
