Evaluation Of The Neel Isogrid Retaining Wall System:

Evaluation of the ISOGRID Retaining Wall System Highway Innovative Technology Evaluation Center (U.S.),1999-01-01 Prepared by the Highway Innovative Technology Evaluation Center a CERF service center This report presents the results of a HITEC evaluation of the Isogrid Retaining Wall System designed and developed by the Neel Company The report describes the basic capabilities and limitations of the Isogrid System for use as a technically viable precast mechanically stabilized earth retaining wall system The evaluation was conducted based on material design construction performance and quality assurance information outlined in the HITEC Protocol The Isogrid System features a diamond shaped segmental precast concrete facing panel with weep holes where four panels intersect and welded wire grid type soil reinforcement attached to the center of each facing panel *Guidelines for Evaluating Earth Retaining Systems* Highway Innovative Technology Evaluation Center (U.S.),1998-05-07 Not a set of standards and practices but a description of the Center s program and advice on how manufacturers of retaining walls and other systems can take part in it Discusses the background the panel and consultant evaluation methodology program requirements and deliverables No index Annotation copyrighted by Book News Inc Portland OR **Michigan Roads and Pavements** ,1999 **Native Backfill Materials for Mechanically Stabilized Earth Walls** Joseph E. Dove,2005 Mechanically stabilized earth walls are an attractive alternative to conventional reinforced concrete retaining walls The economy of these walls for non critical applications might be improved by using alternative backfills consisting of on site soils or quarried materials for the reinforced zone The results of this study indicate that use of alternative backfill soils is feasible for non critical wall applications Soils for use with metallic reinforcement should be well graded with a maximum size of 3 inches and have less than 20 percent fines with a plasticity index less than 6 Backfill for polymer reinforced walls should be well graded with a maximum size of 3 4 inch and less than 30 percent fines with a plasticity index less than 9 Use of wall systems such as geosynthetic reinforced modular block walls should be considered when using alternative backfills The primary benefit of using alternative soils is in material procurement Additional costs might be incurred for quality control testing and material placement however there is presently insufficient data to provide quantitative estimates of these costs **Evaluation of the SSL MSE Plus Retaining Wall System** Highway Innovative Technology Evaluation Center (U.S.),2001-01-01 Prepared by the Highway Innovative Technology Evaluation Center HITEC a CERF service center This report describes a HITEC evaluation designed to determine the basic capabilities and limitations of the MSE Plus System manufactured by SSL LLC for use as a mechanically stabilized earth retaining system The evaluation was conducted based on material design construction performance and quality assurance information outlined in the HITEC Protocol The MSE Plus System features rectangular segmental precast concrete facing panels and galvanized welded wire grid type soil reinforcement *Evaluation of the Versa Lok/Miragrid Reinforced Soil Wall System* Highway Innovative Technology Evaluation Center (U.S.),2005-04-25 Prepared by the Highway Innovative Technology Evaluaton Center HITEC a
