D'Abro, 1927 **From Newton to Einstein** Benjamn Harrow, 2019-09-20 FROM THE PREFACE Einstein's contributions to our ideas of time and space and to our knowledge of the universe in general are of so momentous a nature that they easily take their place among the two or three greatest achievements of the twentieth century This little book attempts to give in popular form an account of this work The text of this addition focuses on the contributions of the two scientists born 237 years apart to our understanding of the gravitation phenomenon and to the role played by Einstein's

formulation of his theory of relativity In a format eminently accessible to the curious modern reader Harrow offers the a glimpse of two particular moments in a timeline of scientific discovery As the author states With the knowledge existing in Newton's day Newton could have done no more than he did no mortal could have done more But since Newton's day physics and science in general has advanced in great strides and Einstein can interpret present day knowledge in the same masterful fashion that Newton could in his day With more facts to build upon Einstein's law of gravitation is more universal than Newton's it really includes Newton's

Understanding Space-Time Robert

DiSalle,2006-04-27 Presenting the history of space time physics from Newton to Einstein as a philosophical development

DiSalle reflects our increasing understanding of the connections between ideas of space and time and our physical knowledge He suggests that philosophy s greatest impact on physics has come about less by the influence of philosophical hypotheses than by the philosophical analysis of concepts of space time and motion and the roles they play in our assumptions about physical objects and physical measurements This way of thinking leads to interpretations of the work of Newton and Einstein and the connections between them It also offers ways of looking at old questions about a priori knowledge the physical interpretation of mathematics and the nature of conceptual change Understanding Space Time will interest readers in philosophy history and philosophy of science and physics as well as readers interested in the relations between physics and philosophy

From Newton, Einstein, to GOD Leong Ying,2015-01-13 From Newton Einstein to GOD is a poetic memoir that follows the amazing life of Leong Ying beginning with his birth into poverty in 1961 in the former British colony of Singapore After a short time his family is able to make their way to England There as a child with prophetic abilities and a penchant for daydreaming Ying turns away from his spirituality and toward the logic of science ultimately earning a graduate degree in nuclear physics Shortly thereafter Ying immigrates to the United States and for a time chases what he sees as the declining American dream In this new land the duality of Ying s life comes into focus and he uses science which he d formerly applied to deny the existence of God to reveal the ultimate godly secrets In doing so he discovers the Twin Universe a grand cosmic cycle that will lead us into a new phase one that will have a dramatic influence on the existence and evolution of humankind and our humanity to come Through his unique writing style Ying s philosophy and ideas come vividly to life Interspersed with photographs from his youth and adulthood each page is a unique dance between words and images that will inspire and enlighten
