

Type-XXI Class *II - Start, the "Electric Hammer"*

Project Ursel

The Type XXI was intended to be fitted with an ahead firing anti-air rocket system for self defense against destroyers and other escort vessels. A series of rockets were tested from 1940, some with supercavitating technology but the system was not ready before the end of the war.

Some sources suggest that the system would be installed in a pop-up 4-round launcher ahead of the sailing tower (as drawn). However an all firing configuration appears more logical (see alternative interpretation illustrated below).
