Image Interpretation In Geology:

Image Interpretation in Geology Stephen A. Drury, 1993 The second edition of Image Interpretation in Geology has been fully rewritten to take account of recent advances in geographic information systems GIS and digital image processing The basic physical principles of remote sensing and how they are applied in acquiring image data from aircraft and satellites are described in detail and are then related to the relevant physiology and psychology of human vision From here images from different climate zones of minerals the rocks and soils that they make up common geological structures and geologically controlled vegetation are analysed using the basic mathematical principles of digital processing and GIS In particular the second edition covers all aspects of remote sensing in geology without requiring sophisticated use of mathematics includes a new chapter on applications gives guidelines for the use of remote sensing and GIS and is illustrated by a comprehensive selection of outstanding half tones stereoscopic and colour images This comprehensive text will serve the needs of intermediate and advanced geology and environmental science undergraduates on aerial photograph interpretation and remote sensing courses It is also suitable for postgraduates and professional geologists involved in digital image processing GIS and geological mapping BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

3D Digital Geological Models Andrea Bistacchi, Matteo Massironi, Sophie Viseur, 2022-04-05 3D DIGITAL GEOLOGICAL MODELS Discover the practical aspects of modeling techniques and their applicability on both terrestrial and extraterrestrial structures A wide overlap exists in the methodologies used by geoscientists working on the Earth and those focused on other planetary bodies in the Solar System Over the course of a series of sessions at the General Assemblies of the European Geosciences Union in Vienna the intersection found in 3D characterization and modeling of geological and geomorphological structures for all terrestrial bodies in our solar system revealed that there are similar datasets and common techniques for the study of all planets Earth and beyond from a geological point of view By looking at Digital Outcrop Models DOMs Digital Elevation Models DEMs or Shape Models SM researchers may achieve digital representations of outcrops topographic surfaces or entire small bodies of the Solar System like asteroids or comet nuclei 3D Digital Geological Models From Terrestrial Outcrops to Planetary Surfaces has two central objectives to highlight the similarities that geological disciplines have in common when applied to entities in the Solar System and to encourage interdisciplinary communication and collaboration between different scientific communities The book particularly focuses on analytical techniques on DOMs DEMs and SMs that allow for quantitative characterization of outcrops and geomorphological features It also highlights innovative 3D interpretation and modeling strategies that allow scientists to gain new and more advanced quantitative results on terrestrial and extraterrestrial structures 3D Digital Geological Models From Terrestrial Outcrops to Planetary Surfaces readers will also find The first volume dedicated to this subject matter that successfully integrates methodology and applications A series of methodological chapters that provide instruction on best practices involving DOMs DEMs and SMs A wide range of case studies including small to large scale projects on Earth Mars the 67P Churyumov Gerasimenko comet and the Moon Examples of how data collected at surface can help reconstruct 3D subsurface models 3D Digital Geological Models From Terrestrial Outcrops to Planetary Surfaces is a useful reference for academic researchers in earth science structural geology geophysics petroleum geology remote sensing geostatistics and planetary scientists and graduate students studying in these fields It will also be of interest for professionals from industry particularly those in the mining and hydrocarbon fields

Processing of Remotely-Sensed Images Paul M. Mather, Magaly Koch, 2022-04-06 Computer Processing of Remotely Sensed Images A thorough introduction to computer processing of remotely sensed images processing methods and applications Remote sensing is a crucial form of measurement that allows for the gauging of an object or space without direct physical contact allowing for the assessment and recording of a target under conditions which would normally render access difficult or impossible This is done through the analysis and interpretation of electromagnetic radiation EMR that is reflected or emitted by an object surveyed and recorded by an observer or instrument that is not in contact with the target This methodology is particularly of importance in Earth observation by remote sensing wherein airborne or satellite borne instruments of EMR provide data on the planet s land seas ice and atmosphere This permits scientists to establish relationships between the measurements and the nature and distribution of phenomena on the Earth s surface or within the atmosphere Still relying on a visual and conceptual approach to the material the fifth edition of this successful textbook provides students with methods of computer processing of remotely sensed data and introduces them to environmental applications which make use of remotely sensed images The new edition s content has been rearranged to be more clearly focused on image processing methods and applications in remote sensing with new examples including material on the Copernicus missions microsatellites and recently launched SAR satellites as well as time series analysis methods The fifth edition of Computer Processing of Remotely Sensed Images also contains A cohesive presentation of the fundamental components of Earth observation remote sensing that is easy to understand and highly digestible Largely non technical language providing insights into more advanced topics that may be too difficult for a non mathematician to understand Illustrations and example boxes throughout the book to illustrate concepts as well as revised examples that reflect the latest information References and links to the most up to date online and open access sources used by students Computer Processing of Remotely Sensed Images is a highly insightful textbook for advanced undergraduates and postgraduate students taking courses in remote sensing and GIS in Geography Geology and Earth Environmental Science departments

Geological Field Techniques Dr Angela L. Coe, 2010-11-01 The understanding of Earth processes and environments over geological time is highly dependent upon both the experience that can only be gained through doing fieldwork and the collection of reliable data and appropriate samples in the field This textbook explains the main data gathering techniques used by geologists in the field and the reasons for these with emphasis throughout on how to make effective field

observations and record these in suitable formats Equal weight is given to assembling field observations from igneous metamorphic and sedimentary rock types There are also substantial chapters on producing a field notebook collecting structural information recording fossil data and constructing geological maps The volume is in a robust and handy size with colour coded chapters for ease of use and quick reference in the field Geological Field Techniques is designed for students amateur enthusiasts and professionals who have a background in geology and wish to collect field data on rocks and geological features Teaching aspects of this textbook include step by step guides to essential practical skills such as using a compass clinometer making a geological map and drawing a field sketch tricks of the trade checklists flow charts and short worked examples over 200 illustrations of a wide range of field notes maps and geological features appendices with the commonly used rock description and classification diagrams a supporting website hosted by Wiley Blackwell Image Processing and GIS for Remote Sensing Jian Guo Liu, Philippa J. Mason, 2016-03-21 Following the successful publication of the 1st edition in 2009 the 2nd edition maintains its aim to provide an application driven package of essential techniques in image processing and GIS together with case studies for demonstration and guidance in remote sensing applications The book therefore has a 3 in 1 structure which pinpoints the intersection between these three individual disciplines and successfully draws them together in a balanced and comprehensive manner The book conveys in depth knowledge of image processing and GIS techniques in an accessible and comprehensive manner with clear explanations and conceptual illustrations used throughout to enhance student learning The understanding of key concepts is always emphasised with minimal assumption of prior mathematical experience The book is heavily based on the authors own research Many of the author designed image processing techniques are popular around the world For instance the SFIM technique has long been adopted by ASTRIUM for mass production of their standard Pan sharpen imagery data The new edition also includes a completely new chapter on subpixel technology and new case studies based on their recent research **Proceedings of the 27th International Geological Congress ,1984-12**
