The Confusion between Art and Design Tsion Avital, 2020-10-06 In the past century the borders

have blurred between art and design. Designers, artists, aestheticians, curators, art and design critics, historians, and students all seem confused about these borders. Figurative painting was reduced to graphic design while still being called art. Figurative sculpture was reduced to nonfunctional industrial design while being called sculpture. This fundamental blunder resulted from total misunderstanding of the concept of abstraction by the founders of modern art. Comprehensive analysis shows that so-called abstract art is neither abstract nor art but a very simple even trivial kind of design. In this book, the prehistoric philosophical, logical, historic, and religious sources of the confusion between art and design are analyzed. A new and coherent conceptual framework is proposed to distinguish between art and design. Nearly one hundred distinctions, contradistinctions, and comparisons between art and design are presented, showing clearly that they are totally independent domains. Philosophy of art books are written by philosophers for philosophers, not for artists and designers; therefore, they are irrelevant for the latter, especially for students who normally lack the necessary conceptual training. This book is not only for theoreticians but for art and design practitioners at all levels. This is a new kind of book: an illustrated philosophical book for the art and design world which can make philosophical knowledge accessible and useful for solving real problems for designers and artists who are mostly visual rather than conceptual thinkers. The book contains over two hundred images, thus art and design people can easily follow the arguments and reasoning presented in this book in their own language. Images lack of distinction between art and design harms both. Design is contaminated by the ills of modern art, while modern art cannot recover from its current stagnation whilst under the illusion that it is actually art rather than design.

Developing Creative Thinking in Beginning Design Stephen Temple, 2018-10-03. Learning to think and act creatively is a requisite, fundamental aspect of design education for architectural and interior design as well as industrial and graphic design. Development of creative capacities must be encountered early in design education for beginning students to become self-actualized as skillful designers. With chapters written by beginning design instructors, Developing Creative Thinking in Beginning Design addresses issues that contribute to deficiencies in teaching creativity in contemporary beginning design programs. Where traditional pedagogies displace creative thinking by placing conceptual abstractions above direct experiential engagement, the approaches presented in this book set forth alternative pedagogies that mitigate student fears and misconceptions, to reveal the potency of authentic encounters for initiating creative transformational development. These chapters challenge design pedagogy to address such issues as the spatial body, phenomenological thinking, making as process, direct material engagement, and its temporal challenges, creative decision making, and the wickedness of design, and the openness of the creative design problem. In doing so, this book sets out to give greater depth to first design experiences and more effectively enable the breadth and depth of the teacher-student relationship as a means of helping your students develop the capacity for long-term self-transformation.

The Visibility of the Image Lambert Wiesing, 2016-09-22. Now available in English for the first time. The Visibility of the Image explores the development of an influential aesthetic tradition.

through the work of six figures Analysing their contribution to the progress of formal aesthetics from its origins in Germany in the 1880s to semiotic interpretations in America a century later the six chapters cover Robert Zimmermann 1824 1898 the first to separate aesthetics and metaphysics and approach aesthetics along the lines of formal logic providing a purely syntactic way of using signs regardless of objective content Alois Riegl 1858 1905 who went on to further develop aesthetics on the model of formal logic creating a theory of style in response to Zimmermann's call for an aesthetics oriented toward formal logic Heinrich Wölfflin 1864 1945 who represents a step toward an understanding of consciousness by using pictures as cognitive tools Konrad Fiedler 1841 1895 the Saxon philosopher who considered the possibility that some kinds of images are made and viewed not for what they show but for their visibility's sake alone Maurice Merleau-Ponty 1908 1961 responsible for taking up the connections between the problems of reducing the range of potential meanings and contexts of a given image down to just the picture surface Charles William Morris 1901 1979 who set out to establish whether a picture with no objective reference such as an abstract painting still counts as a sign and if so in what sense Bringing these thinkers together and interlinking their ideas Lambert Wiesing presents an engaging history of formal aesthetics while reconstructing the philosophical foundations for the appearance of new image forms in the 20th century including the video clip abstract collage digital simulation and virtual reality Using this original approach *The Visibility of the Image* introduces the rise of modern image theory and provides a valuable account of our engagement with pictures in the 21st century
