Myslobodsky, Ina Weiner, 2013-03-09 Despite considerable progress in clinical and basic neurosciences the cure of psychiatric disorders is still remote little is known about their prevention and the etiology and molecular mechanisms of mental disorders are still obscure Diagnoses are still guided by patients stories The mission of animal models is to bridge the gap between the story and the synapse Contemporary Issues in Modeling of Psychopathology attempts to do this by examining such questions as What good might come from such a model Are we wasting our time How far can we carry results from model animals such as rats and mice without causing a highly distorted view of the field and its goals This book serves as the opening volume for a new series Neurobiological Foundation of Aberrant Behaviors

*Schizophrenia Bulletin*, 2005 **A Neuroscientist's Guide to Classical Conditioning** John W. Moore, 2012-09-05 Classical conditioning CC refers to the general paradigm for scientific studies of learning and memory initiated by Pavlov and his followers As a model system associative learning in human and animals CC continues to play a central role in research and an expanding role in evaluating disorders of learning and memory aging drug abuse teratology The book is aimed at the growing population of scientists and medical specialists who employ CC methods Despite the current high level of interest in CC within neuroscience There is presently no single source that provides up to date comprehensive coverage of core topics CC is a very large field Nevertheless some organisms and behaviors have dominated the neuroscience scene Foremost of these are classical eyeblink conditioning rats cats rabbits and humans and fear conditioning This handbook of CC focuses on these systems
