Thinking in Education Research Nick Peim,2018-03-08 Thinking in Education Research examines the resources available from philosophy and theory that can be practically applied to any educational research project Nick Peim argues that the current well established divide between theory and the empirical in research methods is unhelpful to students Instead Thinking in Education Research looks at major lines of thinking in modern European philosophy from Kant to Freud and Derrida to Malabou and how they provide a rich resource for every stage of conducting research By getting students engaged in how to think and how to do Peim illustrates that thinking is in fact a vital part of how you do research and is not an aside Essential aspects of the research endeavour are re examined in the light of key philosophical positions to offer constructive potential including defining the object giving an account of the field the relation to truth the process of writing and constructing a case and the value attributed to formal knowledge Thinking in Education Research does not try to resolve the unresolved issues of research thinking but rather encourages readers to productively engage with them so that we can enhance the possibilities of research practice and find opportunities for its expansion and refinement Throughout the chapters clear and concise summaries of key philosophical positions and ideas are complemented with boxed accounts of how the philosophical debates discussed can be applied to real research projects These features encourage the reader to consider how they can develop thinking and apply theory at every stage of their own research This is essential reading for any educational research methods student or practicing researcher for important ways of thinking afresh about research methodology

Investigating Complex Phenomena: Bridging between Systems Thinking and Modeling in Science Education Tom Bielik,Moritz Krell,Laura Zangori,Orit Ben Zvi Assaraf,2023-11-15 Understanding the complexity of the natural world and making sense of phenomena is one of the main goals of science and science education When investigating

complex phenomena such as climate change or pandemic outbreaks students are expected to engage in systems thinking by considering the boundaries of the investigated system identifying the relevant components and their interactions and exploring system attributes such as hierarchical organization dynamicity feedback loops and emergence Scientific models are tools that support students reasoning and understanding of complex systems and students are expected to develop their modeling competence and to engage in the modeling process by constructing testing revising and using models to explain and predict phenomena Computational modeling tools for example provide students with the opportunity to explore big data run simulations and investigate complex systems Therefore both systems thinking and modeling approaches are important for science education when investigating complex phenomena
