Illustrated Glossary for Solar and Solar-Terrestrial Physics A. Bruzek,C.J. Durrant,2012-12-06 At the XV General Assembly of the International Astronomical Union in Sydney 1973 Commission 10 for Solar Activity requested the incoming Organising Committee to establish a small group to recommend a standard nomenclature for solar features and to prepare an illustrated text which would clear the jungle of terms for the benefit of solar physicists as well as of theoreticians and research workers in related fields The challenge was taken up by the president of Commission 10 Prof K O Kiepenheuer and his persuasive advocacy has led eventually to the present book In the course of the work the declared aim but not the basic purpose was revised Rather than prepare a list of standard terms we have preferred to collect together all the terms that appear in current English language literature Synonyms and partially overlapping terms are all recorded for the most part without prejudice Each has been defined as exactly as possible with the hope that in the future they may be used and understood without ambiguity It would be a step on the road to standardisation if these terms were not re used for new phenomena New observations and new theories will lead to reappraisals and redefinitions so the Glossary is intended more as a guide to the present situation than as a rule book Illustrated Glossary for Solar and Solar-Terrestrial Physics A. Cosmic Electrodynamics Gregory D. Fleishman, Igor N. Toptygin, 2013-03-21 This book presents the fundamental concepts of the theory illustrated by numerous examples of astrophysical applications Classical concepts are combined with new developments and the authors demarcate what is well established and what is still under debate To book illustrates how apparently complicated phenomena can be addressed and understood using well known physical principles and equations within appropriate approximations and simplifications For this purpose a number of astrophysical examples are considered in greater detail than what is normally presented in a regular textbook In particular a number of nonlinear self consistent models are considered which is motivated by the latest observational data and modern theory

The Dynamic Sun A. Hanslmeier, Mauro Messerotti, Astrid Veronig, 2012-12-06 Our Sun is the nearest star and thus an ideal laboratory to study dynamic processes which are related to solar terrestrial physics The topics addressed in this book cover solar MHD and generation of acoustic waves as well as physical parameters that are suited to describing solar activity and could serve as proxies for space weather forecasting The influence of solar activity radiation and solar wind on telecommunication systems satellite missions etc is also discussed In short contribution reports are given on various topics in solar physics The book covers solar physics from the photosphere to space weather influences The intended level of readership is aimed at students working in this or related fields professionals and astronomers who wish to acquire some basic knowledge in the field of solar terrestrial relations which is provided in the review articles
