Image Databases And Multi-media Search Ramesh Jain,Arnold W M Smeulders,1998-01-22 The World Wide Web and the Internet are signs that things will be very different in the future And what is so striking about this computer age future is that it comes incredibly fast and is incredibly overwhelming Anyone who has surfed the Web has exclaimed at one point or another that there is so much information available so much to search and so much to keep up with Where Lycos and AltaVista are already accepted tools for textual information image and multimedia search engines are the natural answers in the quest for pictorial information This book provides a state of the art description of that field It contains the proceedings of a valuable workshop in Amsterdam where people gathered to discuss the progress in the field The topics cover computational methods of searching for pictures the powerful pictorial clues in the recognition of objects storage and indexing of objects in a database and ways to access the requested pictorial information Image Databases Vittorio Castelli,Lawrence D. Bergman,2004-04-07 The explosive growth of multimedia data transmission has generated a critical need for efficient high capacity image databases as well as powerful search engines to retrieve image data from them This book brings together contributions by an international all star team of innovators in the field who share their insights into all key aspects of image database and search engine construction Readers get in depth discussions of the entire range of crucial image database architecture indexing and retrieval transmission display and user interface issues And using examples from an array of disciplines the authors present cutting edge applications in medical imagery multimedia communications earth science remote sensing and other major application areas Image and Video Retrieval Erwin M. Bakker,Thomas S. Huang,Michael S. Lew,Nicu Sebe,Xiang S. Zhou,2003-08-02 The refereed proceedings of the Second International Conference on Image and Video Retrieval CIVR 2003 held in Urbana Champaign IL USA in July 2003 The 46 revised full papers presented together with an introduction and 2 invited papers were carefully reviewed and selected from 110 submissions The papers are organized in topical sections on image retrieval indexing strategies and structures feature based retrieval semantic and learning video retrieval user studies applications video summarization and analysis and performance *Multimedia Databases and Image Communication* Maurizio Tucci,2003-06-30 Multimedia technologies are rapidly attracting more and more interest every day The Internet as seen from the end user is one of the reasons for this phenomenon but not the only one Video on Demand is one of the buzzwords today but its real availability to the general public is yet to come Content providers such as publishers broadcasting companies and audio video production rms must be able to archive and index their productions for later retrieval This is a formidable task even more so when the material to be sorted encompasses many different types of several media and covers a time span of several years In order for such a vast amount of data to be easily available existing database design models and indexing methodologies have to be improved and refined In addition new techniques especially tailored to the various types of multimedia must be devised and evaluated For archiving and

transmission data compression is another issue that needs to be addressed In many cases it has been found that compression and indexing can be successfully integrated since compressing the data by filtering out irrelevancy implies some degree of understanding of the content structure
