Imagery in Scientific Thought

Arthur I. Miller,1986 Arthur I Miller is a historian of science whose approach has been strongly influenced by current work in cognitive science and in this book he shows how the two fields might be fruitfully linked to yield new insights into the creative process

Metaphors: Figures of the Mind Z. Radman,2013-03-09 This book deals with various aspects of metaphors and yet it is not only or perhaps not even primarily about metaphor itself Rather it is concerned with the argument from metaphor In other words it is about what I think we can learn from metaphor and the possible consequences of this lesson for a more adequate understanding for instance of our mental processes the possibilities and limitations of our reasoning the strictures of propositionality the cognitive effect of fictional projections and so on In this sense it is not strictly speaking a contribution to metaphorology instead it is an attempt to define the place of metaphor in the world of overall human intellectual activity exemplary thematized here in the span that ranges from problems relating to the articulation of meanings up to general issues of creativity Most of the aspects discussed therefore are examined not so much for the sake of gaining some new knowledge about metaphor work conducted in the science of metaphor is presently so huge that an extra attempt to spell out another theory of metaphor may have an inflationary effect the basic strategy of this book is to view metaphor within the complex of language usage and language competence in human thought and action and finally to see in what philosophically relevant way it improves our knowledge of ourselves Certainly by adopting this basic strategy we also simultaneously increase our knowledge of metaphors of their functions and importance

Scientific Theology: Theory

Alister E. McGrath,2007-01-23 The third volume of an extended and systematic exploration of the relation between Christian theology and the natural sciences focussing on the origins and place of theory in Christian theology

Scientific

Theology: Theory Alister E. McGrath,2006-11-23 Noting the important parallels between scientific theory and Christian doctrine McGrath offers a sustained defense of the necessity of doctrine within Christian theology against those who argue for a non dogmatic Christianity The approach developed within this volume builds on the work of writers such as Heidegger and Habermas and argues that theory is to be conceived in terms of the communal beholding of reality The many theoretical issues to be addressed in this volume include the manner in which closure is secured in theological theorizing the implications of the stratification of reality for its representation the place of metaphysics in Christian theology and the nature of revelation itself Viewed as a whole Theory represents a fresh evaluation of the origins and place of theory in Christian theology which is certain to provoke discussion and debate This third volume completes the A Scientific Theology series A Scientific Theology is a groundbreaking work of systematic theology in three volumes Nature Reality and Theory Now available as a three volume set

Thinking from Within J. Roos,2006-01-31 This text is a tribute to the idea that strategy should be practised in ways that fuel our minds by engaging our bodies When we do strategy rather than think strategy we

engage our senses in ways that pure intellectual reasoning cannot This book considers ideas that can help leaders transform strategy into imaginative and responsible practice

Routledge Revivals: Science as a Questioning Process (1996)
 Nigel Sanitt, 2017-09-29 First published in 1996 Science as a Questioning Process evaluates scientific theories through from Darwinian evolution to relativity and from quantum theory to cosmology It offers an examination of these theories in terms of a compromise between resolvable empirical questions and theoretical questions left unresolved The book asks questions that deal with both intellectual and public concern about what science tells us and how reliable it is Through this novel perspective the book examines science in the context of everyday culture and the role it plays in everyday life This book will be of interest to anyone working in the fields of philosophy sociology and science

Science as a Questioning Process: N
 Sanitt, 1996-01-01 Science as a Questioning Process is a general philosophy of science book aimed at a wide audience interested in science philosophy and social science The book views science as a questioning process From this novel perspective the author then evaluates theories in terms of a trade off between empirical questions resolved and theoretical questions left unresolved He discusses questions of perennial intellectual and public concern about what science tells us and how reliable it is

The Process of Science N.J. Nersessian, 2012-12-06 For some time now the philosophy of science has been undergoing a major transformation It began when the received view of scientific knowledge that developed by logical positivists and their intellectual descendants was challenged as bearing little resemblance to and having little relevance for the understanding of real science Subsequently an overwhelming amount of criticism has been added One would be hard pressed to find anyone who would support the received view today Yet in the search for a new analysis of scientific knowledge this view continues to exert influence over the tenor of much of present day philosophy of science in particular over its problems and its methods of analysis There has however emerged an area within the discipline called by some the new philosophy of science that has been engaged in transforming the problems and methods of philosophy of science While there is far from a consensus of beliefs in this area most of the following contentions would be affirmed by those working in it that science is an open ended on going activity whose character has changed significantly during its history that science is not a monolithic enterprise that good science can lead to false theories that science has its roots in everyday circumstances needs methods concepts etc

Quantum Language and the Migration of Scientific Concepts Jennifer Burwell, 2018-02-09 How highly abstract quantum concepts were represented in language and how these concepts were later taken up by philosophers literary critics and new age gurus The principles of quantum physics and the strange phenomena they describe are represented most precisely in highly abstract algebraic equations Why then did these mathematically driven concepts compel founders of the field particularly Erwin Schrödinger Niels Bohr and Werner Heisenberg to spend so much time reflecting on ontological epistemological and linguistic concerns What is it about quantum concepts that appeals to latter day Eastern mystics poststructuralist critics and get rich quick schemers How did their interpretations and misinterpretations of

quantum phenomena reveal their own priorities In this book Jennifer Burwell examines these questions and considers what quantum phenomena in the context of the founders debates over how to describe them reveal about the relationship between everyday experience perception and language Drawing on linguistic literary and philosophical traditions Burwell illuminates representational and linguistic problems posed by quantum concepts the fact for example that quantum phenomena exist only as probabilities or tendencies toward being and cannot be said to exist in a particular time and place She traces the emergence of quantum theory as an analytic tool in literary criticism in particular the use of wave particle duality in interpretations of gender differences in the novels of Virginia Woolf and critics connection of Bohr s Principle of Complementarity to poetic form she examines the quantum mysticism of Fritjof Capra and Gary Zukav and she concludes by analyzing nuclear discourse in the context of quantum concepts arguing that it too adopts a language of the unthinkable and the indescribable

Remapping Reality John A. McCarthy, 2006-01-01 This book is about intersections among science philosophy and literature It bridges the gap between the traditional cultures of science and the humanities by constituting an area of interaction that some have called a third culture By asking questions about three disciplines rather than about just two as is customary in research this inquiry breaks new ground and resists easy categorization It seeks to answer the following questions What impact has the remapping of reality in scientific terms since the Copernican Revolution through thermodynamics relativity theory and quantum mechanics had on the way writers and thinkers conceptualized the place of human culture within the total economy of existence What influence on the other hand have writers and philosophers had on the doing of science and on scientific paradigms of the world Thirdly where does humankind fit into the total picture with its uniquely moral nature In other words rather than privileging one discipline over another this study seeks to uncover a common ground for science ethics and literary creativity Throughout this inquiry certain nodal points emerge to bond the argument cogently together and create new meaning These anchor points are the notion of movement inherent in all forms of existence the changing concepts of evil in the altered spaces of reality and the creative impulse critical to the literary work of art as well as to the expanding universe This ambitious undertaking is unified through its use of phenomena typical of chaos and complexity theory as so many leitmotifs While they first emerged to explain natural phenomena at the quantum and cosmic levels chaos and complexity are equally apt for explaining moral and aesthetic events Hence the title Remapping Reality extends to the reconfigurations of the three main spheres of human interaction the physical the ethical and the aesthetic or creative

Imagery, Creativity, and Discovery B. Roskos-Ewoldsen, M.J. Intons-Peterson, R.E. Anderson, 1993-05-28 What factors affect creativity and the generation of creative images What factors affect the ability to reinterpret those images Research described in this book indicates that expectations constrain both of these attributes of creativity Characteristics of the imagined pattern such as cohesiveness or its psychological goodness also affect image generation and reinterpretation Other evidence indicates that images can be combined mentally to yield new manipulable

composites Cognitive models encompass the research and extend it to fields as diverse as architecture music and problem solving The Philosophy of Science and Technology Studies Steve Fuller,2013-10-18 As the field of Science and Technology Studies STS has become more established it has increasingly hidden its philosophical roots While the trend is typical of disciplines striving for maturity Steve Fuller a leading figure in the field argues that STS has much to lose if it abandons philosophy In his characteristically provocative style he offers the first sustained treatment of the philosophical foundations of STS and suggests fruitful avenues for further research With stimulating discussions of the Science Wars the Intelligent Design Theory controversy and theorists such as Donna Haraway and Bruno Latour Philosophy of Science and Technology Studies is required reading for students and scholars in STS and the philosophy of science **Psychology of**

Science Barry Gholson,1989-07-28 This 1989 book offers a comprehensive overview of the work of scholars in several different disciplines contributing to the development of the psychology of science the systematic elaboration and application of psychological concepts and methods to clarify the nature of the scientific enterprise *The Eureka Effect* David N Perkins,2001 From the taming of fire to the creation of the laser breakthrough thinking that is a sudden seemingly unaccountable moment of inspiration has shaped and advanced civilization In this sly tour de force Perkins explores the common logic behind breakthroughs across many fields From a Metaphorical Point of View Zdravko Radman,2015-03-30
